# Three tie micros to mainframes

## DG board links its small units to IBM CPUs

By Susan Mahoney  
CW Staff

WESTBORO, Mass. — Data General Corp. has introduced a communications interface that is said to permit direct communications between IBM mainframes and DG's Desktop Generation, Eclipse 300 and Eclipse C/30 low-end processors. The product is scheduled to make its debut today at the Office Automation Conference in Los Angeles.

The ISMC/2 is a two-channel, front-end, intelligent synchronous micro controller board that enables its processors to offload high-speed synchronous communications for more efficient file transfer and interactive communications, according to a DG spokesman.

Supported by DG's bi-synchronous DG/SNA and X.25-compliant Xolitic communications software products, the ISMC/2 lets the Desktop Generation, Eclipse 300 and C/30 systems connect directly to a Systems Network Architecture/Synchronous Data Link Control or public data network, as well as DG's own network, the vendor said.

### Stout tie to IBM CPUs

The ISMC/2 gives the Desktop Generation a facility for communicating directly with IBM mainframes via DG's bi-synchronous and DG/SNA products.

The product, which runs under DG's AOS and AOS/VS operating systems, is a single 7- by 9-in. printed-circuit board that reportedly fits into any unreserved slot in the CPU chassis or expansion module of a Desktop Generation Model 105P, Eclipse 300 or Eclipse 30, according to a spokesman for the vendor.

The ISMC/2 is composed of a 16-bit Microchip processor with 32K bytes of dynamic random-access memory, a host I/O system and two communications channels. Each channel is capable of full-duplex communications, with modem control and a choice of interface, the vendor noted.

At press time, the price for ISMC/2 was set at \$1,050. Additional information is available from DG, located at 440 Computer Drive, Westboro, Mass. 01580.

## CORRECTIONS

An announcement of the Cause on-line member data base (CW, Jan. 23) should have stated that the data base includes information from more than 150 different organizations divided into 10 areas.

An announcement of Byncoart, Inc.'s Byncoart OS Release 1.0 (CW, Feb. 6) failed to state that the major enhancement to the new release is performance improvements of between 15% and 35%.

## Real-time link ties IBM micro to SI software

By John Goffett  
CW Staff

ANDOVER, Mass. — Software International Corp. last week entered the micro-to-mainframe communications market by announcing a real-time link between its mainframe general ledger package and a variety of applications that run on the IBM Personal Computer.

Smart Link enables Personal Computer users to extend the data extraction and manipulation resources of Software International's on-line General Ledger and Financial Reporting System at the micro level, a spokesman said.

The product is said to provide for on-line, real-time extraction of live data and does not use any batch processing mechanisms to create a shadow file accessed by the micro.

### No modifications

Smart Link reportedly requires no modifications to Software International's General Ledger and Financial Reporting System on the mainframe. It provides users with the ability to perform operations such as data input and report production on the Personal Computer that would otherwise be performed on an IBM 3270 terminal.

In addition, Smart Link reportedly uploads budget information to appropriate mainframe general ledger files under comprehensive security and audit trails.

Restricted upload capabilities are provided to prevent loss of mainframe data integrity, the spokesman said. The security systems are the same as those that govern access to Software International's mainframe applications.

Smart Link also allows users to load data into a variety of current spreadsheet packages and data base management systems, including Lotus Development Corp.'s Lotus 1-2-3, VisiCalc, VisiCalc, Microsoft, Inc.'s Multiplan. It will also operate with micro applications that incorporate Software Arts, Inc.'s Data Interchange Format.

Smart Link does not require rekeying of commands in order to retain a download or upload session, the spokesman noted. It automatically recalls a session if it was stored in Smart Link's library; sessions can be modified to give new download or upload specifications.

Data from the General Ledger and Financial Reporting System can be placed into a specific area of the user's spreadsheet for greater flexibility, according to a spokesman for the vendor.

Smart Link will run on the IBM Personal Computer or Personal Computer XT equipped with Technical Analysis Corp.'s Trms board coaxial interface.

The software is priced at \$2,995 per micro from Software International, 1 Tech Drive, Andover, Mass. 01810.

## Products help micro emulate 3270 terminal

By Jeffery Bleser  
CW West Coast Bureau

SANTA CLARA, Calif. — A one-year-old data communications vendor claims to have tightened the integration between IBM Personal Computers and CPUs with the introduction of a micro-to-mainframe link that reportedly enhances a Personal Computer's 3270 emulation features.

Porte Data Systems, Inc.'s micro-to-mainframe link consists of six related hardware and software modules.

Porte-PJ, an emulation and adapter board that provides IBM Personal Computers and Personal Computer XT's with a coaxial cable interface to 3270-based networks and allows the micros to emulate 3278 and 3279 display terminals.

Porte-Graph, a "daughter" board that enables Personal Computers to duplicate the IBM 3279 color display station's color graphics capabilities and produce hard-copy output with the same resolution as the micros' display screens.

Three IRL-Net packages that permit users to download whole 700, CICS or CMS files faster rather than in one-page sections.

Porte-Cell, a Personal Computer-resident communications utility that allows remote terminal users to dial into 3270 coaxial cable networks and thus gain access to corporate data bases.

Porte-PJ occupies one Personal Computer or Personal Computer XT channel slot and — in an effort to simplify future product upgrades — implements all its associated software on diskettes rather than in programable read-only memory.

When equipped with the board, IBM Personal Computers can double as terminals interfacing with host mainframes and as stand-alone processors operating in the PC-DOS operating system mode, according to Porte Product Manager Ron Rawson. Users can reportedly switch back and forth between a mainframe session and stand-alone operation by touching just one button on a Personal Computer's keyboard.

In addition to its increased buffer memory, Porte-PJ has a PJ board with supporting up to 32K bytes of buffer memory, eight times as much as the company's existing 3270 emulation product, the PC78-2. This expanded storage capacity, in turn, allows an IBM Personal Computer or Personal Computer XT to emulate a larger set of 3279 color graphics capabilities than was previously possible with the 4K-byte PC78-2, Rawson said.

In addition to its increased buffer memory, Porte-PJ incorporates an interface expansion bus into which users can plug various daughter boards and thus enhance a Personal Computer with additional "personality" or functionality.

One such daughterboard is Porte-Graph, which rides piggyback on the PJ and gives IBM micro users a

# Thoroughbred

Meet the newest champion in the world's greatest sorting stable!

(SyncSort OS 2.5)

Call (201) 568-9700.

Find out why it takes a SyncSort to beat a SyncSort.

## SyncSort OS 2.5

Performance Improvements

EXCPs: 35%

TCB CPU Time: 15%

SRB CPU Time: 25%

**syncsort**  
INC.

Here we go again—improving the Sorting Breed!

That sleek young thoroughbred out in our main paddock is SyncSort OS, Release 2.5. It's by SyncSort 2.4 out of that celebrated brood mare, High Technology. And it's destined to win a lot of prizes on OS/VS and MVS/XA tracks.

**IMPROVING THE UNIMPROVABLE:** Until now, SyncSort 2.4 was the best OS/VS sort program ever bred. It was far faster than any IBM sort. And it was easier to use, too—thanks to a tack-room full of advanced features.

SyncSort 2.4 probably could have continued to win prizes for years. There was only one catch—it wasn't good enough for us.

**PICKING TOMORROW'S WINNERS:** We knew that new hardware and software systems would create opportunities for evolution of advanced sort programs. Speed would still be essential. But productivity would continue to skyrocket in importance. So that's the way we bred 2.5.

**FASTER SORT PERFORMANCE:** We've added new sorting techniques to SyncSort 2.5 to make it the only sort that outperforms 2.4. You can expect savings in critical resources up to those shown at lower left. And that can add up to a big increase in total systems throughput.

**NEW PROGRAMMER PRODUCTIVITY FEATURES:** As any seasoned sort-watcher knows, there's a lot more to data handling than sorting. SyncSort 2.5 introduces a Data Utility set that applies its proven techniques to a wide range of processing and reporting jobs.

For example, with a single execution, 2.5 can sort, format and present data in virtually any form you want:

- **SortWriter**—a powerful tool that can produce extensive reports as a by-product of your normal sorting—without user exits and the associated programmer investment. Headers, trailers, total and sub-total capabilities provide flexible formatting.
- **Record Formatting**—To existing features like INCLUDE/OMIT, INREC/OUTREC, SUM and others—all of which have been expanded—2.5 adds new and useful capabilities like data conversion, editing, insertion of literals.
- **Multiple Output**—From a single sorted file, you can create multiple files and reports. Each can include the same or different data as determined by INCLUDE, OMIT, OUTFIL or OUTREC parameters.

If you're tired of betting on sort programs that empty your pockets of resources and are tough to handle, give us a call. We'll arrange to have SyncSort OS 2.5 run a few furlongs on your own turf.

Syncsort Incorporated 560 Sylvan Ave., Englewood Cliffs, N.J. 07632

## NEWS

# NCR brings out Cobol-oriented supermicro

By Tom Marshall  
CW Staff

DAYTON, Ohio — NCR Corp. last week replaced its aging I-9020 line of minicomputers with a Cobol-oriented version of its Tower 1632 supermicro.

Called the I-Tower, the new system offers two to six times the internal performance of the I-9020, NCR said. The I-Tower's hardware is virtually identical to the Unix-based Tower system announced by the firm a year ago, the vendor said, noting that both are based on Motorola, Inc.'s 68000 microprocessor.

The I-Tower supports RM/Cobol, a specialized version of Cobol developed by a long-time supplier of NCR software, Ryan-McFarland Corp. of Rolling Hills Estates, Calif.

The I-Tower system also runs Ryan-McFarland's RM/COS, which optimizes the execution of Cobol programs.

Users of the original Tower 1632 can now run Cobol on their systems. This, according to Jim Krohe, program manager for the Tower line, can

be done in two ways. Users can run RM/Cobol directly on the Unix operating system, or they can run both Unix and Ryan-McFarland's RM/COS. He noted, however, that the operating systems cannot run concurrently.

Likewise, users of the I-Tower can, if they prefer, purchase the Unix operating system for nonconcurrent use.

Krohe said NCR plans to offer RM/COS, RM/Cobol and Unix packages to Tower 1632 and I-Tower users, but the packages are not yet available.

While NCR representatives seemed unclear on how the firm plans to market the I-Tower, its assistant vice-president of interactive systems, John C. Duritch, said one group of potential users is microcomputer users who have exhausted the capabilities of their current systems. He noted that from a performance standpoint, the I-Tower offers roughly the same power as IBM's System/36 or Burroughs Corp.'s B85 series of processors.

The I-Tower can run some existing I series applications, including NCR's

Interactive Financial Management System (IFMS). It also supports off-the-shelf programs that operate under Ryan-McFarland's RM/Cobol compiler and RM/COS operating system.

While the I-Tower is not directly compatible with larger processors in the NCR line, users of RM/Cobol can migrate to the larger I-9000 line of mainframes by making a software conversion, according to Raymond D. Smith, director of general-purpose systems product marketing. To switch to the I-9000 line, I-Tower users will have to make file modifications and recompile their Cobol programs. Smith claimed the conversion process is a minor task, requiring about two hours per program.

The I-Tower can handle 15 users and is equipped with 512K bytes of standard random-access memory (RAM). It can be expanded with a processor memory control module that offers up to 2M bytes of RAM.

The I-Tower supports up to two 5¼-in. floppy disk drives, each offering 1M byte of storage, and a maxi-

mon of two 5¼-in. Winchester disk drives, each offering up to 44M bytes of unformatted storage. Two 5¼-in. Winchester disk drives, each offering up to 8M bytes of unformatted data storage, can be used in addition to the 5¼-in. Winchester drive for a total disk storage capacity of 960M bytes.

The I-Tower includes a 90-in./sec streaming tape drive, which can store 21.6M bytes of unformatted data, as well as a battery-powered memory support system designed to protect the system against power fluctuations.

An I-Tower processor with 512K bytes of RAM, 44M bytes of Winchester disk storage, a 1M-byte flexible disk drive, a 20M-bps streaming tape drive, a 135 line/min printer, CRT terminal, eight RS-232C I/O ports, IBM 2780/3780 remote batch communications protocols, RM/COS and RM/Cobol costs \$28,000. It will be available next month and distributed through the firm's direct sales force.

NCR's corporate headquarters is located in Dayton, Ohio 45479.

## ANALYSIS

## NCR becomes first to replace mini with supermicro

By Tom Marshall  
CW Staff

NCR Corp. has scored a first with its newly announced I-Tower Cobol-oriented supermicrocomputer: It became the first of the big five computer vendors to replace an existing minicomputer line with a supermicrocomputer.

Whether NCR can parlay the newly announced system into a highly successful product, however, remains to be seen.

NCR stated that the I-9020, the mini line replaced by last week's announcement of the I-Tower, has been its most successful product to date, with more than 20,000 installed systems. However, NCR representatives who presented details of the I-Tower last week did not seem to have a clear focus of who that system's target user would be.

One obvious market for the I-Tower is as a replacement processor for I-9020. NCR said the I-Tower can operate up to six times faster than

the I-9020, but users who want to make the switch from an I-9020 must convert their NCR's line operating system to Ryan-McFarland, Inc.'s RM/COS.

The other market NCR appears to be eyeing for the I-Tower are microcomputer users who have exhausted the capabilities of their single-user systems. How NCR plans to attack that market remains unclear.

Raymond B. Smith, NCR's director of general-purpose systems product marketing, noted that NCR has approached traditional NCR third-party software developers to adapt existing Cobol programs for the I-Tower. But that raises the question of how that list of Cobol programs compares with the list of Basic programs available for microcomputers. And will NCR be able to convince micro users, who have been weaned on Basic, to switch to Cobol?

Jim Krohe, NCR's program manager for the Tower line, noted that there are currently more than 1,000

off-the-shelf programs that run under RM/COS. Krohe said that it is a fairly simple process to convert many of those Cobol programs to run under RM/COS.

NCR estimates it will take users 15 minutes to two hours per program to convert to the RM/COS/Cobol compiler. Krohe said the amount of time the conversion takes depends on how much non-Asol-standard code a given Cobol program uses. Users of strict Asol-standard Cobol would just have to recompile Cobol programs to use them under RM/Cobol.

Regardless of whether NCR cracks open a new market for small business users, the I-Tower may carve out an all-new, profitable niche for the Tower line, said Dave Moschella, an analyst with the Framingham, Mass., market research firm International Data Corp.

According to Moschella, NCR has basically acted as a systems integrator in developing the Tower line,

building it on the Motorola, Inc. 68000 microprocessor, OS/2 peripherals and other products from the original Tower 1632, announced about a year ago, has shown moderate success as a small business system, Moschella said, noting many Tower sales have gone to systems integrators, not end users.

But NCR's assistant vice-president of interactive systems, John C. Duritch, disagreed with Moschella. He contended that NCR has also been able to sell the Tower 1632 to end users. In any case, both Moschella and Duritch agreed that NCR is fairly pleased with sales of the Unix-based version of the Tower.

Moschella said the Cobol-oriented I-Tower is probably guaranteed at least limited success just on the strength of the I-9020 market. Moschella added that since NCR is simply remarketing an existing system with a new software system, the costs associated with the newly announced I-Tower are very low.

## Xerox cuts 8010 Star price; adds stand-alone, remote models

By Tom Marshall  
CW Staff

PALO ALTO, Calif. — Xerox Corp. appeared to be trying to retink a market for its 8010 Star microcomputer last week when it slashed \$5,000 from the micro's \$15,000 purchase price and added stand-alone and remote workstations to the Star line.

Announced in 1981 to operate with the Ethernet local-area network, the 8010 Star was greeted with a great amount of interest because it employed such innovative features as multiple windowing, a mouse and

icons. However, the network workstation was never very successful because, industry watchers say, it was far too expensive and possibly too sophisticated for what was then a new market. Critics of the system said Xerox simply missed what turned out to be a very fertile market for smaller, stand-alone microcomputers.

Currently, Xerox apparently is trying to reignite the Star. The stand-alone and remote workstation models announced last week are essentially identical to the original network workstation, but they do not require users to buy cabling and pay the ser-

vise charges for Ethernet.

The stand-alone model, which costs \$8,995, is equipped with the same proprietary 16-bit microprocessors used in the network workstation. It comes with 512K bytes of random-access memory, a 10M-byte hard disk drive, a 1.2M-byte, 8-in. double-sided, double-density floppy disk drive, and Xerox's proprietary Mesa operating system.

What is missing from the system are circuit boards that allow it to be connected to Ethernet. However, the stand-alone unit is field upgradeable to the remote workstation and the

network workstation, Xerox noted.

The remote workstation is offered in the same configuration as the stand-alone workstation, but it is equipped with communications capabilities that allow it to communicate with an Ethernet system via an RS-232C port. To the user, the workstation operates as if it were attached to a local-area network, but the user also has the ability to perform local computing.

Xerox made its announcement through its Office Systems Division, located at 3333 Coyote Hill Road, Palo Alto, Calif. 94304.

## NEWS

COBOL-80 from page 1

breathed in controversy since the first Ansi draft standard was released in 1980. Critics charge that conversion to Cobol-80 would be expensive and time-consuming. Supporters say the standard would add significant features that could make Cobol a viable alternative to many fourth-generation languages.

*Author: Thomas DeRose*

The ISO action on the X3J4 standard "effectively closes debate on the American side," said Jerome Garfunkel, president of Jerome Garfunkel Associates, Inc. in Litchfield, Conn., and a member of the Ansi X3J4 and ISO Cobol committees. "I expect [Ansi] will also go along and adopt this as a standard."

Another X3J4 Committee member concerned that the action puts pressure on Ansi to come to an agreement quickly. "The implications are that we are essentially going to lose some control on fleshing a standard," said Lawrence E. Madson, associate director of data processing at the Travelers Insurance Co. in Hartford, Conn.

Lennel Skidmore, manager of systems development and educational services at New England Data Services in Guilford, Conn., called the ISO action "very important. . . . It says the international community is not pleased with the openness of our process, that they're getting off on their own."

"It's a political game that's being

played," Madson said. "The international community is essentially saying, 'Hey, Ansi, let's get going on this.'"

Garfunkel, who has been an outspoken proponent of a new standard, said adoption by the ISO SC5 Committee will force the federal government to adopt the standard as a base for hardware procurement. He noted that hardware vendors will probably follow the government's lead.

Skidmore agreed that hardware vendors may add impetus to the project by standardizing their compilers based upon whichever standard is adopted first. "If I were IBM, I wouldn't want to be married to two different standards. I'd say it's more important that they match up," he said.

However, Madson pointed out that any ISO action is still subject to a six-month international letter ballot, at which time problems could arise. "If the international organization says, 'Let's throw caution to the wind and try to pass something through,' they may find out what X3J4 found — that it's not that easy to convince users who have a substantial investment [in existing programs], Madson maintained. "Just because [WG8] has made a recommendation, doesn't mean it will be adopted."

The Data Processing Management Association's (DPMA) principal representative to the ISO Committee has said that the standardization process is too far along to be rushed by international pressures. "We feel

## ISO changes procedures for making Cobol revisions

**VIENNA** — At the same time that it approved and sent on for review the latest version of the Ansi X3J4 Committee's proposed Cobol-80 standard and modifications, an International Standards Organization (ISO) working group last week also adopted a resolution to change the current procedures for revising the language.

The resolution approved by the ISO Technical Committee 97/Working Group 8 proposes to add new features to the Cobol standard every two years. It also extends the period between complete overhauls of the standard to 10 years.

Currently the standard is slated to be revised entirely every five years. But controversy over proposed revisions has delayed the adoption of the Cobol-80 standard by more than three years.

According to the resolution's originator, Jerome Garfunkel, a member of the Ansi X3J4 and ISO Cobol committees, the resolution would make it easier to keep Cobol

current with state-of-the-art languages. "Very few people ever had complaints about new features," said Garfunkel, president of Jerome Garfunkel Associates, Inc. in Litchfield, Conn. "This proposal is designed to isolate new features and speed up development."

But critics believe adoption of the dual schedule could pose serious compatibility problems. "If you're going to slow down the clarification process, you're dropping the portability issue," said Lennel Skidmore, manager of systems development and educational services at New England Data Services in Guilford, Conn. "The major user involvement is in the standard, the less time you have to clarify them."

Skidmore noted that the resolution could result in a proliferation of incompatible compilers that include new features that have not been fully studied. "If we keep changing the standard, we open the door to more incompatibility," he said.

that if the progress that's been made on X3J4 continues, we'll see a draft standard that DPMA can approve

shortly," Art Dubnow, who is chairman of the DPMA's Standards Committee, said.

LOTUS from page 1

base functions, communications, spreadsheet and graphics and allows users to preview documents as they will appear when printed.

The communications package combines terminal emulation, automatic dial-up and login to remote data bases, data capture, point-to-point file transfer and user control of all terminal parameters. Users can instantly suspend a communications session, analyze the captured data using Symphony and return to the communications mode, the spokesman claimed.

The forms-oriented data base lets the user enter a list of items to be included and automatically creates the basic data base structure. It includes report generation employing the spreadsheet tool, when combined with the word processor, offers the ability to perform mail-merge functions.

The expanded spreadsheet is compatible with Lotus 1-2-3 spreadsheets and includes a new ability to manipulate text as well as numeric information in spreadsheet models.

Asked if Symphony would be adapted for the IBM 3270 Personal Computer, Kapor said his company had as yet made "no definite commitment" to adapt the product to micros other than the Personal Computer and Personal Computer XT. However, he added that Lotus has a broad intention of making Symphony available eventually on all bases that can run 1-2-3.

At present, 1-2-3 also operates on Texas Instruments, Inc.'s Professional Computer; Zenith Data Systems Corp.'s ZS-1 microseries; Inc.'s Professional Computer; Digital Equipment Corp.'s Rainbow 100; Byte Management Corp.'s Hyperion; Grid Systems Corp.'s Compas; and Compaq Computer Corp.'s Compaq.

"We would like to become preeminent in the software industry. But we have to demonstrate to ourselves, to the financial community and to users — that Lotus is here to stay," Kapor told the members of the press who gathered for the announcement at the Pierre Hotel here. He went on to say that the company, which turned a \$14.5 million profit last year, was threatened not by "a mythical software shark," but by the challenge of marketing its own new products.

As an introductory offer, owners or new pur-

## 'Symphony' gets hesitant bravos

**NEW YORK** — Users gathered at the Pierre Hotel here last week to hear Lotus Development Corp. announce its Symphony integrated software package were excited about the product, but they suggested that Lotus 1-2-3 devotees may not yet be ready for it.

Frank Tansillo, business systems analyst at Corning Glass Works, said Symphony is "beyond the leading edge" of most users' technical accomplishments. "It's easily the most powerful thing out there, but it will be a while before people are ready to take full advantage of it," Tansillo said.

But software specialist Esther Dyson, president of Boston Research Co., said users would not be dissuaded from buying Symphony even if they have yet to exhaust 1-2-3's capabilities. "You don't have 1-2-3 and then have Symphony for dessert," she said, noting that the five-function tool will appeal to a broader market.

Even so, James I. Magid, an electronic connector industry analyst at L.P. Rothchild, Unterberg, Twbin, said the WP or communications functions alone would convince many users to pay Lotus for the new product.

Dyson said that Symphony's \$200 introductory price for 1-2-3 users would allow the new software product to ride the coattails of the hot-selling package. She added that Lotus does not "want to cannibalize" the market for 1-2-3 and is so giving users an incentive to buy both products.

chasers of Lotus 1-2-3 can buy Symphony for an additional \$200. David McElfresh, vice-president of product development for Lotus, said the offer, due to run for three to six months, was designed to provide "an easy path" for upgrading to the higher priced product and "to protect our user base." Lotus is at 161 First St., Cambridge, Mass. 02142.

## Appeals court calls moonlighting on system criminal

By James Connolly  
CW Staff

**INDIANAPOLIS** — Using an employer's computer for moonlighting is just as much of a crime as the surreptitious tapping of telephone, power or CATV lines, an Indiana appeals court has ruled. The three-judge Second District Court of Appeals last month reinstated the theft convictions of a former computer programmer for the Indianapolis Department of Planning and Zoning. The court said that Michael McGraw must face sentencing for using the city's IBM 3091 computer in connection with his second job, selling a franchised diet product called Nature Slim.

McGraw faces a maximum penalty of four years' imprisonment and a \$10,000 fine.

The appeals court ruling, which defies attorney Phillip Montague's sales pitch to the court to reconsider, reversed a Marion County Superior Court judge's averse of a jury verdict of guilty on two theft counts. That judge said Indiana's theft law wasn't specific enough to cover the theft of computer time.

McGraw's attorney had likened McGraw's actions to a worker "using the office xerox machine to copy a recipe for his wife." He said there were only 35 pages of Nature Slim-related work — such as client lists and form letters — in the 1,100-page printout of McGraw's computer library.

But County Deputy Prosecuting Attorney James Warden appealed to the higher court, which ruled that "computer services, leased or owned, are a part of our market economy in large dollar amounts. Computer time is a service for which money is paid . . . thus it is property."

New involved in computer sales, McGraw was fired by the city in 1981 for failing to complete his work, apparently because he was working on his second job on city time, according to Warden.

# VDT operators report 'adverse' pregnancies

By David Hyman  
Of the New York Times

**NEW YORK** — The National Association of Working Women, 9 to 5, said last week that it has uncovered a work site where 60% of the pregnancies of VDT operators ended "adversely" over a four-year period.

United Airlines' telephone reservations office in San Francisco was named as the site where the pregnancies of 48 VDT operators ended in 15 miscarriages, one stillbirth, one death of a newborn infant, two children born with birth defects, two premature deliveries and three other undisclosed "problems" between 1978 and this year.

"We're not pointing the finger only at [VDT] manufacturers," Karen Nussbaum, executive director of the Boston-based labor organization, said at a news conference here last Thursday. She admitted 9 to 5 had not identified the cause of the pregnancy problems and was unable to give the name of the manufacturer of the terminals at the United reservations office.

Nussbaum said 9 to 5 has asked the National Institute of Occupational Safety and Health to investigate the United work site.

A spokesman for United Airlines in Chicago cited studies by the Center for Disease Control and the National Academy of Sciences finding "no evidence that radiation emitted

(by VDTs) reaches or exceeds any international standard of safety and health." Noting the "vast majority" of VDT operators are women of reproductive age, the spokesman said that "clusters of problem pregnancies will occur by statistical chance alone" and are unrelated to VDT use.

Dr. Joanne M. Stellman, a Columbia University public health school professor brought to last week's news conference by 9 to 5, agreed there is "no proven link" between VDT radiation and health problems. She went on to note that there is also "no evidence of widespread birth defects" among VDT operators.

Nevertheless, Stellman maintained that the U.S. trails the "rest of the world in providing health protection for VDT workers."

Nussbaum acknowledged that the stress caused by VDT work could be relieved by "painfully simple solutions" undertaken by employers without VDT design or manufacturing changes. However, she said that 9 to 5 is "calling for new standards for manufacturers," including metal shielding for terminals.

The labor group leader said 60% of the terminals manufactured in the U.S. do not meet international safety standards. Bringing the rest "up to

snuff" would be "cheap in comparison to the human costs."

The association also released results of a voluntary survey of 871 of the nation's 10 million VDT operators, showing that over half experience eye or muscle strain and 48% reported pregnancies ending in miscarriages, abortion, stillbirth, early death of the infant, premature delivery or major birth defects.

At the same time, 48% of those responding to 9 to 5's questionnaire said their health was "about the same," while 38% described theirs as "slightly worse" and 10.9% as "much worse."

## Codex to OEM Ungermann-Bass local network

**MANSFIELD, Mass.** — Codex Corp., a manufacturer of modems and multiplexers, moved to diversify its product line last week by introducing a local-area network that is being supplied to the company by Ungermann-Bass, Inc. under a five-year agreement.

Under terms of that agreement, Codex will market, install and maintain Ungermann-Bass' Net/One local network under its own name. It will be the first member of a family of new networking products called the Codex 4000 series. Ungermann-Bass will also continue to market Net/One.

Adopting an unusual tactic in the marketing of local-area networks, Codex will offer one- to five-year lease options for network hardware and software components.

Like Ungermann-Bass' Net/One, the Codex local network will be available in either broadband or baseband versions or in a hybrid version, where baseband "feeder" networks can be interconnected with a high-capacity broadband backbone network. Other support options available from Codex for the network include initial site survey and the design and installation of the cable plant.

Codex reported that a typical local net configuration would cost, between \$450 and \$750 per port.

Codex is located at 20 Cabot Blvd., Mansfield, Mass. 02048.

# 2 Trillion

Last night we backed up  
two trillion (yes, that's 12 zeroes)  
characters of data, and  
checked our work.

## VMBACKUP

We bring files back alive, the way they should be—readable, usable—which some "out-rate" backup systems don't do. We verify the data before moving it to tape. That's why 75% of the Fortune 100 companies trust their vital data to VMBACKUP.

How do we do this?

- Start with a solid design.
- Take the best systems people in the VM community.
- Have them build it right.
- Add competent, helpful support people.
- Stay close to our customers.

And we create a winning situation for our users.

London • Frankfurt • Paris • Stockholm • Milan • Tel Aviv • Rio De Janeiro • Sydney • Tokyo

## NEWS

## Strict testing the vendors' aim

Many of the companies that submit their microcomputer software products to the International Bureau of Software Test (IBST) are not seeking that company's seal of approval.

These software manufacturers, according to IBST President William Goss, simply want their products to undergo strict, out-of-house testing that may reveal problems their own quality assurance experts may have missed. In addition to testing, IBST will build test data sets that its clients, which include Digital Research, Inc. and Verbiton Corp., can utilize repeatedly.

"We relieve their designers of test work and allow them to focus on developing new products," Goss said. "Also, our thorough testing can save a software manufacturer quite a lot of money because we catch problems

that would otherwise have to be fixed in the field."

IBST charges between \$6,000 and \$25,000 to test a microcomputer software package. Some tests run as high as \$100,000, depending on the number of functions incorporated in the package.

### Reliability cheap

In comparison, the certification processes offered by Peripheral Vision Co. and Benchmark Computer Systems, Inc. are relatively cheap. Both firms charge between \$400 and \$2,000 to test and approve most micro packages.

Peripheral Vision President Philip Raymond guarantees a four-week turnaround time for certification. Benchmark claimed an average three-week turnaround record, and IBST said its seal of approval testing process takes anywhere from four to

10 weeks, depending on the sophistication of the micro package.

"Narrow-scope programs are easy to test," Goss said. "But a micro operating system or a multifunction application takes considerably longer to review because there are many more interrelationships to study."

One of the most common problems IBST encounters with micro packages is poorly written documentation, a flaw that Raymond and Ken Thorson of Benchmark also highlighted.

"First, we take the package's documentation and code it, just like in school," Thorson said. "Then we match the documentation to the operation of the software itself to see how useful the manuals are to the user. Many times the documentation is so poorly written it's useless."

## Carrier promises reduced telex rates

**NEW YORK** — Rates "up to 60% below those charged by traditional telex services" were promised earlier this month by International Record Carrier, Inc. when it began marketing its SuperTelex service in the U.S.

A telex transmission between the U.S. and the U.K.,

Hong Kong or Israel costs 75 cents per minute, said International Record Carrier President James McKenna. To continental Europe, the per-minute price is 85 cents; to anywhere else, it is \$1.55.

All International Record Carrier telex traffic goes directly from the U.S. custom-

er's terminal to a computerized switch in London. It is forwarded to other countries from there if necessary.

The terminal-computer hookup is provided by GTE Telecommunications Corp.'s packet-switched network at no additional charge to the customer. This arrangement eliminates the delays inherent in competing services, which accumulate: outboard international telex traffic at store-and-forward switches in New York, Miami and other U.S. gateways before transmitting it overseas, McKenna explained.

International Record Carrier traffic is transmitted to London at approximately 1,200 bit/sec, considerably faster than traditional telex service, he added.

McKenna reported that his company has developed a software package which "bypasses the complicated accounting procedures of other telex services as well as eliminates the need for a specially trained telex operator."

Stored on a floppy diskette, the software is compatible with microprocessors from 28 different manufacturers, including Apple Computer, Inc., IBM and Wang Laboratories, Inc. International Record Carrier will provide compatible micros to customers without them on a free, trial basis, according to McKenna.

International Record Carrier is a subsidiary of Consortium Holdings Ltd., headquartered in Israel, which already markets SuperTelex service in that country, throughout Western Europe and in Hong Kong.

## SEALS

from page 1

were testing and approval, according to Vice-President Ken Thorson. The Minnesota firm, an established retailer of turnkey financial systems, will not only grant its Benchmark Seal of Approval, but will publish and market a package for its developer.

"There are a lot of people out there buying micro systems," Thorson said. "But a lot of that software is developed by losers and entrepreneurs who often don't utilize the most stringent testing

methods. That can be very frustrating and costly for the user."

"We can ensure that the package you're buying is a quality product. That's where the UL and Good Housekeeping - completion comes in."

Both Peripheral Vision and IBST offer testing for microcomputer software, but Raymond and Goss don't demand that their service has not yet developed. All three executives admit that marketing their approval is the biggest obstacle.

## TelTech

**We're Looking For The BEST CICS Instructors In NYC...**

...and Chicago, Los Angeles, San Francisco, Orlando, Washington D.C., Dallas, St. Louis, Atlanta, Minneapolis...

Here's your opportunity to join TelTech, a leading CICS organization. We supply the students, support and high salary—You supply the expertise and ability to share it in a relaxed, interactive atmosphere.

If you are fluent in several of the following areas:

- Programming and Debugging: CICS Command Level and Macro
- Internals: Recovery/Restart, Architecture, Tuning, Debugging
- Database: IMS, D/L, ADABAS
- Files: VSAM
- Telecommunications: VTAM

# Afcom predicts 7% rise in '84 DP operations salaries

By Patricia Kautz  
ON line

GARDEN GROVE, Calif. — The salaries of computer operations personnel are expected to rise an average of 7% this year, with a high of 7.5% for data entry managers and a low of 6.5% for key-to-disk operators, the Association for Computer Operations Managers (Afcom) predicted in its annual salary survey.

Underlining this rosy prediction, however, was Afcom's note that the average rise in salaries during 1983 was only 5.8%, considerably less than the anticipated 7.5%. "This is a much smaller increase than was experienced [in 1983], but given the lowest inflation rate in many years, it is not inconsistent with the general economy," the survey said.

The survey, which covered 250 sites, serves as a guide to salaries currently being paid to employees at various levels within the data entry, data control and computer operations departments of the data center. It claims to be one of the few such surveys to make a distinction between the computer operations manager and the DP operations manager.

Afcom defines DP operations managers as "those who are in charge of computer operations, data entry and data control," whereas computer operations managers are responsible only for the computer room. Using Afcom's definitions, there are some small shops that call their DP manag-

ers computer operations manager. "Surveys that do not make this distinction severely understate the highest operations management salaries and, in effect, perform a great disservice to operations," Afcom said.

Anticipated increases for management personnel led the way, as they did last year, with an average of 7.5%. Other departments followed that high with estimated 7.1% increases for both computer and data processing operations, 7% for data control and 6.9% for data entry.

## Actual 1983 increases

In 1983, computer operations, by department, led the way in salary gains with an average increase of 5.5%. Afcom said. Data entry salaries rose 3.5%; bringing up the rear was data control, where overall salaries rose a minuscule .2%.

The position that showed the single largest average increase last year was DP operations scheduler, whose salary jumped 13%. Next was computer operations managers, whose salaries rose 11.5%.

On a national basis, DP operations managers earned an average annual salary of \$36,150 last year, earning 20% more a year than their counterparts in computer operations.

In large installations (those spending more than \$150,000 in equivalent monthly equipment rental costs), the DP operations manager is earning

\$42,080, and the computer operations manager is earning \$24,294. In smaller centers (under \$50,000 in equivalent monthly equipment rental costs), the DP operations manager averages \$31,330 a year, and the computer operations manager averages \$26,166.

The survey also delved into recruitment problems. The heaviest recruitment efforts targeted the computer room, where survey respondents said they encountered the most difficulty in finding qual-

ified and experienced candidates. For example, 55% of the respondents experienced difficulty in locating qualified computer operators, while 60% found it "very difficult, if not impossible," to find qualified DP operations managers.

Conversely, there was no shortage of computer operator trainees.

Copies of the survey are available for \$10. Afcom can be reached through Data Center Management Services, Suite 201, 11501 Brookhurst, Garden Grove, Calif. 92640.

## Sting nets five alleged smugglers

MARLBORO, N.J. — U.S. Customs Service agents last week charged five people, including a Chinese citizen and an AT&T Information Systems, Inc. engineer, with plotting to smuggle high-tech equipment to China.

The five, arrested after what prosecutors claimed was one of a series of meetings with an undercover customs agent, allegedly tried to buy 100 transverse-wave tube amplifiers from the agent, who was running a "sting" operation.

Held in lieu of bonds ranging from \$250,000 to \$1.5 million, the five were charged with conspiracy to export munitions illegally — specifically, \$1 million worth of Watkins-John-

son Co. amplifiers, which allegedly can be used for missile-guidance systems and for jamming radar. Assistant U.S. Attorney Andrew Rucolo Jr. told a federal magistrate that the suspects gave the agent a "shopping list" of items that they wanted to buy and told the agent they had smuggled other goods to China.

Rucolo said the lists included various types of computer equipment and military night scopes.

The AT&T Information Systems employee was identified as Kung-Shin Lin of Lincoln, N.J., a naturalized American citizen. Rucolo said Lin didn't use his AT&T position in connection with the conspiracy.

# DP crime bills sitting on congressional back burner

By John Gattant  
CW Staff

WASHINGTON, D.C. — Pending federal computer crime legislation is wintering in subcommittee this year, languishing on the congressional back burner while foreign policy and budget issues hold sway.

Four major DP crime bills are still awaiting action in the House of Representatives' Judiciary Subcommittee on Civil and Constitutional Rights, which is chaired by Rep. Don Edwards (D-Calif.). While Edwards said at November hearings that the subcommittee would move promptly to determine if there is a need for a federal computer crime law [CW, Nov. 28], three months later no further hearings or subcommittee action is scheduled.

According to a subcommittee staff member, Edwards is still awaiting the U.S. Justice Department's recommendation on the need for legislation before moving on bills introduced by Reps. Bill Nelson (D-Fla.), Daniel A. Mica (D-Fla.) and Lawrence Coughlin (R-Pa.). The staffer said the Justice Department promised a recommendation at the subcommittee's Nov. 18 hearings, but was delayed by the recent resignation of Attorney General William French Smith.

The fifth DP crime bill, introduced by Rep. William J. Hughes (D-N.J.), is still on hold in the House Judiciary Subcommittee on Crime. A staff member said the subcommittee, chaired by Hughes, anticipates at least one additional day of hearings on the bill, which deals primarily with credit card fraud. Though not yet formally scheduled, those hearings are expected in March.

In the Senate, no action has yet been scheduled on a federal crime bill filed last August by Sen. Paul Trible (R-Va.). That legislation — the Senate version of Rep. Nelson's DP crime bill — is still awaiting initial hearings in the Senate Judiciary Subcommittee on Criminal Law.

Hearings on the Senate version of the Small Business Computer Crime Prevention Act, approved by the House in October [CW, Oct. 31], are slated to begin March 7 before the Committee on Small Business. The bill, introduced by Sen. Paul Tsongas (D-Mass.), would set up a public and private-sector task force to investigate the problem of computer crime in small business and recommend preventative measures.

Earlier this month, the Computer Crime Prevention Act of 1984 was filed by Sen. William S. Cohen (R-

Maine) in response to recent Senate hearings on computer hacker activities (see story below).

If no action is taken on the stalled crime bills by Congress' scheduled Oct. 4 adjournment, the bills' sponsors will have to decide whether to reintroduce the bills in the next session.

Nelson's Federal Computer Systems Protection Act of 1983 (H.R. 1082) would make computer crime a federal offense if it involved federal agencies, institutions insured by the U.S. government or computers that operate in interstate commerce. The bill, which currently has 118 cosponsors, calls for fines of \$50,000, or up to twice the monetary gain from such a crime, and prison terms of up to five years.

H.R. 4289 and H.R. 4348, both introduced by Mica, would set up a clearinghouse on federal computer

crime (see story on page 18) in addition to making it a federal offense to use a computer without authorization and with the intent to defraud or steal. The bill prescribes a fine of up to \$50,000 and five years' imprisonment. H.R. 4350 also forces review by the House Ways and Means Committee because it incorporates an income tax credit for buyers of micro.

Rep. Coughlin's succinct three-paragraph H.R. 4301 would make the use of a computer in a manner not authorized by the owner a federal crime punishable by a fine of up to \$100,000 and up to 10 years' imprisonment.

The DP crime portion of Rep. Hughes' H.R. 3570, designed to curb credit card fraud, would make the fraudulent use of a computer a federal offense punishable by a fine of up to \$10,000 and a prison term of up to 10 years.

## Bill targets unauthorized access

By John Wintner  
CW Washington Bureau

WASHINGTON, D.C. — A new computer crime bill, introduced recently in the U.S. Senate after hearings on rampant, illegal computer hacker activities, contains special

provisions to deter unauthorized access of data bases.

The Computer Crime Prevention Act of 1984, proposed Feb. 8 by Sen. William S. Cohen (R-Maine), contains specific penalties for buying, See **CW** page 13

## CRIME

from page 12

procuring or selling the passwords to the computers covered in the legislation in order to obtain money or services illegally. The penalties for this offense would be \$50,000 or three times the amount obtained and/or a maximum prison sentence of five years.

To deter computer hackers, penalties for any unauthorized access not involving fraud or damage would be up to \$5,000 and one year in jail. These would be levied only against "intentional hackers." It would "not penalize computer enthusiasts who accidentally tap into the computer systems," Cohen said.

Like other computer crime bills now under consideration in Congress, the proposed law covers computers owned or operated by the federal government and federally insured financial institutions and any system used in interstate commerce. Fines for illegally using computers for fraud, damaging computers or altering their content would be \$50,000 or three times the amount of any money obtained and up to five years in prison.

Cohen noted that his Subcommittee on Oversight of Government Management held two days of hearings on hacking and computer crime last October. "Those hearings vividly illustrated that computer break-ins should not be treated as simply innocent pranks by curious youngsters," he said.

## Computer crime clearinghouse proposed

A clearinghouse to identify "vulnerabilities and threats to federal computer systems" has been proposed in legislation filed by Rep. Daniel A. Mica (D-Fla.) to combat what he called the "dangerous mismanagement of federal computer resources."

Dubbed the Interagency Committee on Computer Crime and Abuse, the clearinghouse would compile and disseminate information and statistics on the incidence of computer fraud and abuse.

The clearinghouse idea was incorporated in two DP crime bills introduced by Mica last year. The bills — H.R. 4256 and H.R. 4354 — currently are awaiting action in the House, where they received only limited attention in the previous session of Congress.

The bills call for the clearing-

house to be established within the executive branch of the federal government and to be chaired by the attorney general. The interagency committee would also have as members the secretaries of commerce, defense and the treasury, the chairman of the Federal Communications Commission and the director of the Federal Bureau of Investigation.

World size coordinate research

Aside from its responsibilities as a computer crime information clearinghouse for federal departments and agencies, the interagency committee would also be charged with coordinating research relating to "the development of more secure computer systems." In that function, it would make recommendations to government agencies for improving the security of federal

computer systems.

But perhaps its most important role would be that of making recommendations to Congress "for such legislative changes as the committee determines to be desirable in order to protect computer systems from fraud and abuse." In that role, Mica told recent hearings of the House Subcommittee on Civil and Constitutional Rights, the clearinghouse could effectively aid Congress in combating computer crime.

In addition to the proposed clearinghouse, Mica's pending legislation calls for the creation of a Computer Security Research Program. Administered by the secretary of commerce, the program would provide funding to individuals for research and development in new methods of protecting computer systems from unauthorized access and use.

## NCR Users Conference set for April 29-May 2

CINCINNATI — The Federation of NCR User Groups will hold the 14th annual NCR Users Conference (Nuccon) at the Cincinnati Convention Center here April 29 to May 2.

The conference will include more than 60 educational sessions, includ-

ing presentations on hardware, operating software, software tools, application software management techniques and communications. Also included will be an address by C.E. Easley Jr., NCR Corp.'s president and chief executive officer.

The conference fee is \$355 for participants who register prior to March 16; after that date the fee is \$400.

Further information is available from the Federation of NCR User Groups, Mail Station BDC-3, Dayton, Ohio 45479.

# Decision on higher Ecom rates due Friday

By Phil Hirsch  
of Washington Bureau

**WASHINGTON, D.C.** — The U.S. Postal Service's much-maligned Electronic Computer-Originated Mail (Ecom) service may get a new lease on life this Friday, when the U.S. Postal Rate Commission is scheduled to act on a proposal for higher rates.

The proposal, submitted 10 months ago, would raise the price of a one-page Ecom message from 26 to 31 cents; a two-page message, now

priced at 31 cents, would rise to 40 cents. If the new rates are adopted, according to Karen Usenko, Ecom's director, the service will "begin to break even late next year or early in 1986," and by late 1987 there will be enough of a surplus to repay all of Ecom's accumulated deficit, which currently totals more than \$36 million.

However, not everyone agrees with Usenko's rosy forecast. Critics include the U.S. Department of Justice and Rep. Glenn English (D-Ohio), chairman of a House of Representatives government operations subcommittee, as well as vendors of competing private electronic mail services.

When Ecom began service in January 1982, postal officials predicted it would be profitable at least 60 million messages during fiscal year 1983, which ended Sept. 30. The actual volume was 15.3 million messages.

Last December, The Washington Post reported that one customer, Automotive Incentive Development Co., accounted for 50% to 75% of Ecom's total volume.

The company's president, James Young, was quoted as saying that if the proposed rate increase is implemented, he will stop using Ecom service. In addition, Ecom's managers have been accused of exceeding their authority by unilaterally modifying the service. As originally conceived, Ecom was to be a generation II electronic mail offering. Messages

would be transmitted on-line from the sender's site to a serving post office (SPO) near the recipient; each message would be printed at the latter point, placed in an envelope and delivered by a letter carrier on his regular rounds. The whole trip, from sender to receiver, was supposed to take a maximum of two days.

But the Postal Service has admitted that a significant percentage of Ecom messages have not been transmitted to the "addressee SPO" for some time. Instead, these messages are transmitted by the sender only to his local post office, where they are printed out, placed in envelopes and forwarded to the recipient as ordinary airmail.

About 50% of Ecom messages are handled in this way, according to a statement published by the Postal Service last April in the *Federal Register*. However, Ecom director Usenko last week estimated that figure at between 30% and 35% of the total amount of Ecom messages.

#### Cost advantages

The major advantage of this arrangement for the customer is that it saves the cost of transmission to the addressee's post office, typically amounting to about \$1 per message. The local post office transports the message, after printing and enveloping it at the sender's end, and the total charge to the sender for printing, enveloping and transport is 26 cents or 31

cents, depending on the number of pages.

Consultant Milin Cavanaugh, who is probably Ecom's most vocal critic, contended that this modification of the original Ecom service demonstrates what is wrong with the whole concept. His basic point is that the only market for Ecom is "junk mailers" needing a cheap, quick distribution system. Since there are not enough such mailers to make the service viable, the Postal Service has simply modified Ecom to make it even cheaper.

"But there just aren't enough customers out there even at the lower price," Cavanaugh argued, "so the Postal Service's other patrons have to make up the difference between what Ecom takes in and pays out. In effect, they're paying a steady mounting subsidy to support a handful of junk mailers."

Although Cavanaugh and his fellow critics have attracted a lot of press and public support for the idea that Ecom lacks any redeeming virtue, there is at least one other view.

According to that view, the bulk of the Postal Service's revenue comes from first-class mail; business-related letters supply the bulk

of that revenue, and a rapidly growing proportion of on-line terminals threatens to reduce that revenue stream significantly.

A related argument is that, like the local telephone company, the local post office performs a unique and valuable public service; therefore, if it is desirable to subsidize the local telephone company so it can retain business customers, it is equally desirable to subsidize the post office so it can do likewise.

Critics of that argument, however, point out that unlike the local telephone company, Ecom is not a successful business venture.

The upcoming report of the Postal Rate Commission will significantly impact Ecom's future. Besides the rate increase proposal, the commission will also consider whether to let Ecom users, for an additional four cents, send a business reply envelope along with a message and whether to let users send any number of messages at one time (they must currently send at least 200).

If either of these latter changes is approved, it will mark the first time a major modification of Ecom's original design has been officially endorsed.

# DEC TO IBM SNA

Now available...full SNA capability for your DEC computer! Comboard/SNA gives your terminals access to IBM interactive applications. You can be transferred between systems transparently, all in the complete fully supported package, from Software Results.

Comboard/SNA is a proven and reliable, single-board, 256KB computer communications computer that plugs into your DEC Unibus. Formed with Comboard software, the system is a cost-effective solution to troublesome SNA communications problems.

Comboard/SNA allows your DEC to emulate on IBM PU Type 2 communications node. You have a full gateway into your SNA without the trouble of passing through a secondary network.

For further information, fill in the coupon below or call Software Results...the leader in DEC to IBM communications.

## MCI announces service to compete with Ecom

**WASHINGTON, D.C.** — "We're in the same market arena" as the U.S. Postal Service's Electronic Computer-Originated Mail (Ecom), "but we're offering much more," a spokesman for MCI's mail, Information Services Corp. said last week after the company unveiled MCI Volume Mail, a second-generation electronic message service that works much like Ecom.

In both services, the user transmits multiple messages to a receiving center, where they are printed, enveloped and then delivered by the Postal Service as ordinary first-class mail.

MCI charges 70 cents to \$1 for a one-page letter, depending on volume and job requirements. This is roughly what Ecom costs. But while Ecom requires users to send at least 200 messages at a time, MCI Volume Mail customers can send any number of messages.

In addition, the MCI service allows business reply envelopes or other inserts to be sent along with the message, accepts a wide variety of message formats, reproduces company logos and features a simple sign-up procedure.

The U.S. Postal Service is currently seeking authority to provide a business reply envelope as part of Ecom and to do away with the 200-message minimum.

## Need general accounting software for IBM System/38? We've simply solved your problem.

LAWSON ASSOCIATES has solved it with the first general accounting software specifically designed for IBM System/38. Not merely compatible, but one-of-a-kind to fully utilize your computer's capabilities. Compare. You won't find a total software solution like it anywhere else.

**DESIGN FEATURES:** They include: on-line system using data base management; menu-driven, user friendly programs written in RPGIII, the System/38 language; and integrated modules. Their

benefits: one of installation and use, plus maximum computer productivity.

**INTEGRATED MODULES:** These available include: General Ledger and Report Writer/Accounts Payable/Accounts Receivable/Fixed Assets/Periodic Inventory/Purchase Order/Order Entry/Inventory Control.

**SERVICE FEATURES:** Fully documented and supported. On-site training and implementation. One year warranty. Available now for immediate installation.

For more information, please call or write:  
Lawson Associates, 202 East Hudson Ave., Minneapolis, MN 55415  
(612) 375-3600

# Ways to bypass the phone net on the rise

## PRODUCT SPOTLIGHT

By Phil Shwartz  
CW Washington Bureau

One of the nation's more extensive bypass networks was put into operation last year by Citicorp, the New York-based banking giant. The network links 10 sites—three on the East Coast, two on the West Coast and most communicate with each other via 56K bit/sec digital circuits.

At the other end of the bypass spectrum is a 1.644K bit/sec digital microwave channel that a company is using to connect two buildings across the street from each other. This system, according to a spokesman for M/A-COM, Inc., a leading manufacturer of private microwave equipment, costs about \$30,000.

Citicorp, by comparison, is paying \$24 million annually just to lease the satellite channels connecting its 10 earth stations. Each of the stations cost another \$1 million.

But in both cases, the motivation is the same—to reduce communications costs below what the wire-line carriers (telephone companies that own transmission facilities) are charging for equivalent transmission capacity and/or to obtain service features not available from the carriers.

How many companies today are using services that bypass the telephone network? Because the figures come from bleed sources—bypass vendors and telephone carriers—it is impossible to know accurately. The Federal Communications Commission is expected to issue a detailed analysis within the next month or so, although the commission is not universally considered unbiased.

However, it seems certain that bypassing will increase, both in terms of increasing revenues and in terms of a broadening of the types of users involved. Higher tariffs are a major reason. AT&T's proposed rates for private-line service, filed last

October and now scheduled to become effective April 3, call for a 15.7% overall increase in inter-local access and transport area private-line rates. Because of the FCC's recently announced access charge plan (CW, Jan. 30), this percentage is expected to increase.

### Conflicting definitions

One difficulty of discussing bypass is that conflicting definitions of the term exist. It may mean going around the local-exchange network or going around the long-distance network—or both.

Add wide-area observers talk about bypass in terms of customers and/or traffic, others are concerned about costs and revenues. This semantic confusion creates problems because if a bypass facility is defined as one that provides communications more cost-effectively between and among points normally served by the analog telephone network, then the biggest providers of bypass facilities are the telephone companies themselves.

AT&T is laying fiber-optic cables down the East and West Coasts, as well as elsewhere, which will interconnect several of the nation's largest cities. Meanwhile, many former Bell operating companies are installing local as well as long-distance fiber-optic channels.

The Pacific Telecable Group (PacTel) has laid three fiber-optic loops in downtown San Francisco that can put 90M bit/sec of digital transmission capacity on the shoulders of nearby companies. In addition, PacTel has just about completed a fiber-optic network in the Los Angeles area that will interconnect the sites of the 1984 Olympics, which are scattered over an area stretching 90 miles north, 30 miles east and 110 miles south of the city. By 1986, the company expects to have all of California's major cities connected by fiber-optic cable.

Meanwhile, it has requested FCC permission to offer digital termination systems in 19 California and Nevada cities and is installing fiber subscriber loop carrier systems in several areas, which would

replace much of the existing residential and business customers' analog local loop with a fiber-optic cable that carries 34 digital voice signals totaling 1.6M bit/sec.

Pa. Tel. has proposed constructing a CATV system to serve Palo Alto, Calif., and several surrounding communities. Part of the system's capacity would be reserved for data transmission at all popular speeds.

### Private microwave

A "key alternative" to these telephone company-provided facilities, according to a recent report published by the market research firm International Data Corp. (IDC), is private microwave. "Given the demand in the 1980s for multifunctioned data/voice services," IDC said, "we expect to see major growth in... microwave-based private communication networks."

Part of this growth will be produced by digital termination systems vendors. A digital termination systems network basically consists of a centrally located microwave transceiver which communicates with users up to about eight miles away through three or four microwave antennas, each serving a different sector of the surrounding area. Users within each sector share a 1.6M bit/sec, digital, full-duplex channel. Because transmission capacity is limited, digital termination systems are generally considered feasible for interactive rather than batch-type data communications and are not suited, at least presently, for voice traffic.

More than 60 companies have requested FCC permission to build and operate digital termination systems, and such systems have been authorized for most of the nation's major cities. Although only a few are actually on the air at the moment, several are scheduled to begin operation this year, so these new bypass facilities should become accessible to a substantial percentage of the nation's corporate communications users by the end of 1984.

See STW625 page 18

## How to Bypass Your Local Telephone Company

Major sources	Types of facilities offered	Comments
AT&T, the former Bell operating companies, independent telephone operating companies and other common carriers	The former Bell operating companies offer long-distance access (local exchange network bypass) using terrestrial analog/digital transmission facilities. Carriers also offer with AT&T, other common carrier network routes or with user's private local/long-distance network.	All carriers making increased use of fiber-optic cable for local long-distance transmission. Many former Bell operating companies planning to introduce local area data transport services, analog-digital digital capabilities. Local area networks this year; they may be introduced in other digital termination systems (DTS). Some former Bell operating companies are planning to build cable TV networks, providing private-line services. The former Bell operating companies are also likely to build office parks offering private transport and/or shared access to terrestrial networks.
Intermarket services vendors (various of which include and offer/independent public who provide communications services to their clients)	Long-distance access using private lines typically leased from phone company. In-house services—electronic mail, private branch exchange and message centers—are also frequently available.	Several communications services are now offered by 50 common carriers, including AT&T, Bell, GTE, and others. Telephone companies and other common carriers are investing in new state-of-the-art communications facilities. Many telecommunications are to be offered this year by at least one multivendor services vendor.
DTS/voice services (DTS provide data-only services which encompass private digital electronic message services or DTS provide transmission by satellite/terrestrial facilities based from offices.)	Point-to-point, point-to-multipoint, microwave-based transmission at speeds of 0.2K M/sec to 1.564 M/sec.	Only one DTS center is operating at the moment. Several plans to be on the air by the end of this year; however, that networking capability will be limited. New technology and the opening of 18-010 frequency band promise to increase DTS transmission capacity.
Teleports (these are primarily office/independent public who provide services which include access to on-orbit satellite earth stations. Others are "satellite farms" providing only satellite-based communications services.)	Long-distance bypass for voice/data communications. Some teleports also bypass local exchange networks.	New York City teleports, that of its kind, scheduled to begin operation late this year. At least two more Bay Area teleports in San Francisco and Los Angeles offices past between Dallas and San Jose are likely to be completed in 1985. According to one estimate, within three years teleports-outside offices/independent public are likely to be operating in the nation's 30 largest metropolitan areas. "Satellite farm" teleports are also operating in about 25 cities.
Cable TV networks	Cable/fiber-optic-based private-line services conveying user on point-to-multipoint basis with local area and/or with long-distance network nodes.	Cable TV-based private-line services are now offered in a number of cities—namely, New York, Pittsburgh, and Omaha. They are planned in several more, but most telephone companies are insisting that the companies must first be certified by state public utilities commissions. The Public Communications Commission has been asked to assist federal jurisdiction.
Private network vendors	Private microwave (including DTS providing point-to-point, point-to-multipoint transmission at all popular bit rates).	Business use of microwave to bypass local exchange networks is increasing. Most new systems operate in the 1.6- or 22-GHz range. Transmission up to 10 miles without regeneration is possible.

WASHINGTON  
UPDATE

JAKE KIRCHNER

Japan will reconsider  
trade proposals: U.S.

WASHINGTON, D.C. — U.S. government officials said recently they believe Japan will reconsider several controversial high-technology trade proposals that have raised serious concerns among American firms.

Chief among the U.S. complaints is a Japanese proposal to create a patent-like protection mechanism for software, allowing for only 15 years of protection and including compulsory licensing to the end user. American industry claims the proposal would allow Japan to raid U.S. software to help it catch up in this important high-technology field.

The other area of concern is a proposal to limit foreign ownership of a certain type of telecommunications network the Japanese government may try to foster in that country.

Both proposals are in the early stages, and U.S. trade officials told

U.S. industry leaders recently that Japan has agreed to consider American views as the proposals are developed. U.S. computer and electronics industry representatives who met with U.S. Commerce Secretary Malcolm Baldrige and U.S. Trade Representative William Brock reported the government has assured them of strong support in the controversy.

CAB orders regulations  
on reservations nets

WASHINGTON, D.C. — The Civil Aeronautics Board (CAB) has directed its staff to prepare regulations to minimize bias in the computerized airline reservations systems provided by airlines to travel agents.

The CAB decision is the latest move in the agency's investigation of complaints that some of the systems, provided by a small number of airlines, are biased in favor of the providers' own flight schedules, to the detriment of carriers who rent time on the systems.

Although there are several systems providers, most travel agents use the systems developed by United Airlines and American Airlines.

Independent studies by the CAB and the Justice Department found a

potential for major abuses with anti-competitive consequences in current systems operations.

The CAB rejected suggestions from some airlines that these systems operations be divested.

The regulations being developed by the CAB staff reportedly will include provisions to ensure all airlines' schedules on a system are carried without preference to any carrier and that participation fees charged by the system providers to other airlines are not excessive.

Group plans ad campaign  
on VDT safety, tech issues

WASHINGTON, D.C. — A newly formed Coalition on Workplace Technology is planning a major advertising campaign on ergonomic and safety issues in support of increased use of office technologies.

The coalition, initially concentrating on VDT safety, was formed in response to concerns that new technology is not put to its best use in the work place, according to the Computer and Business Equipment Manufacturers Association (CBEMA), a major force behind the coalition. The coalition will also target what it terms "unnecessary" legislation now ap-

pearing at the state level to regulate implementation and use of computer-based office equipment, particularly VDTs, said CBEMA spokeswoman Charlotte LaGasse.

Besides CBEMA, other members of the coalition, representing manufacturers and users of high-technology equipment, include the Air Transport Association of America, the American Bankers Association, the American Electronics Association, the American Insurance Association, the American Newspaper Publishers Association, the American Society of Personnel Administrators, the Electronic Industries Association and the Pricing Industries of America.

LaGasse said the number of prospective members is three times the number of groups that have already joined the coalition. She said the group's funding level "is very much up in the air," but that a "major advertising campaign" now under consideration would cost a minimum of \$50,000.

In a statement issued last week, CBEMA President Vic Henriquez said, "We have a great deal of information about the best installation and use of visual displays, about how to introduce new technology in the work place and about the kinds of questions and problems that users experience."

## BYPASS from page 15

According to Telestrategies, Inc., a McLean, Va., consulting firm that devotes most of its time to studying the

business industry, digital termination systems networks in 45 cities will be operating by the end of this year. At least a few of the cities are also likely to be interconnected by then, so some

users should be able to employ the new networks for long-distance as well as local communications.

Another significant source of bypass services is multitenant services vendors. A typical multitenant vendor is the owner of an office building or office park which leases communications circuits from a carrier and resells them to its tenants.

According to Jerry Lucas, president of Telestrategies, Inc., 58 office buildings around the country now provide such services. It is "virtually certain," he added, "that any office building of more than 300,000 square feet built in 1965 will provide shared communication services to its tenants."

Most offices with fewer than 200 employees can save six cents to 20 cents a minute per call by sharing long-distance service instead of dealing directly with the phone company, Lucas contended. And besides this direct saving, he pointed out, the sharer gains access to sophisticated private branch exchange equipment — offering electronic mail boxes, least cost routing and similar features — which the sharer often cannot justify on its own.

Although multitenant service vendors typically lease terrestrial circuits, they may also use satellite facilities. Late last year, for example, Olympus & York, the largest office developer in North America, announced plans to interconnect all of its properties, located in New York and eight other cities, using satellite channels supplied by United Telecommunications, Inc., a major independent telephone company.

## Teleport services

A related form of bypass involves "teleports." The best known of these is being built jointly by New York, the regional port authority, Merrill Lynch & Co. and Western Union. Located in Staten Island, the teleport will provide access from a single location to 24 existing or planned domestic and several international sat-

ellite networks.

Some of the teleport's users will be located in an adjoining "corporate park"; others will be in neighboring areas of New York and New Jersey. Two similar teleports, consisting of earth stations and an office area, are also under construction.

One is in the San Francisco Bay area, the other near Dallas. The big advantage of the teleport-cum-office park is that it can largely eliminate the access circuitry — and its related costs — which existing carriers like Satellite Business Systems must add to their charges.

Telestrategies' Lucas expects teleports to be built in the nation's largest 50 cities within the next three years. He also expects "antenna farms" to be built in the largest five cities. Antenna farms, he explained, are satellite earth stations without office parks connected by leased circuits to users scattered throughout a metropolitan area. Their operators would lease satellite transmission capacity at bulk rates and resell it in smaller pieces at rates no less than those charged by other carriers.

## Regulatory policies

Although the economics of bypass services will have an important bearing on their viability, regulatory policies will also play an important role.

For example, although a number of CATV companies now offer data transmission services and more plan to do so, they are being stymied by telephone companies who insist that the CATV operators must first obtain common carrier licenses. According to a survey conducted last year by Time, Inc. and reported to the FCC, eight states — New Jersey, New Mexico, New York, Oregon, California, Colorado, Connecticut and Nebraska — are investigating this.

Meanwhile, legislation is pending in Congress to free cable-based private communications from FCC regulation, and the FCC is considering whether to preempt state regulatory authority over cable.

## BIM-EDIT vs. IBM ICCF:

Higher  
productivity  
is the better  
deal.

When you compare program editor capabilities, there's no comparison between BIM-EDIT and ICCF. BIM-EDIT has more than 35 features that ICCF can't match. Time-saving, productive features like:

- fast automatic recovery after CICS failure
- library backup without interrupting on-line users
- concurrent library member addition and deletion from batch and on-line
- immediate logoff from any point, including mid-edit session
- logon returns immediately to logoff point and status
- log session maintained per user of commands and responses
- live block group commands — copy, move, delete (ICC: move-in 55-55)
- easy switching between concurrent edit and display sessions
- access to all system commands from any screen or session
- high speed highly functional POWERLisp code queue access
- spool access, edit, other session types, all use same scrolling commands
- multiple commands for one or multiple session may be entered at any time regardless of session type or position
- may add an edit session without permanently affecting the member
- hierarchical library directory structure
- soft links up to 256 characters wide
- support for 3270 models 2, 3, 4, and 5
- dynamic adjustment of screen size support
- exit routines
- member name length up to 32 characters
- access control by sub-library, member or access type
- Help screens
- implied objects of commands (uses last referenced member name)
- library directory always in alphabetical order

Compare the features. Compare the price. You'll agree, the higher productivity of BIM-EDIT is the better deal. BIM has more than a dozen other DOS/VSE system software products, also performs systems programming consulting, and provides computer site services on a 4321-2 system.

## IBM seen marketing micro with 'Trojan horse' strategy

By David Miyata  
OF New York Bureau

**NEW YORK** — With its antitrust worries safely behind it, IBM has developed a "Trojan horse strategy" for infiltrating American businesses with its Personal Computer and for taking over the entire hardware market through services delivered over its Information Network. The Yankee Group said at seminars held here and in San Francisco earlier this month.

IBM's aim is to "integrate and use" with [the] limited processing power, or "desktop Personal Computers," of storage media, software and processors. Dale Kutnick, executive director of the Boston-based consulting firm, told about 150 executives from

user and vendor firms who attended the seminar here, titled "The IBM Impact."

"IBM has settled into its role as the standard-setter for the industry," Kutnick said. Before the U.S. Justice Department dropped its antitrust case against the company, "IBM was almost paranoiac about competition and felt uncomfortable with third-party software developers."

But despite its clear aim to "dominate the industry," IBM is vulnerable in office automation, he contended. It lags behind its minicomputer-making rivals in developing a \$85,000 to \$40,000 system to act as what he called "a departmental file cabinet."

"There is a desperate need for this machine. Customers are looking for a

system in the \$30,000 range. They're still looking for that magic box," Kutnick said.

The rapid acceptance of the IBM Personal Computer, with 550,000 units shipped in 1983 and 1.5 million expected to be shipped in 1984, has obscured IBM's lack of a departmental office automation minicomputer, according to Kutnick.

### Least-own cost to debut?

Until IBM is able to design a 4300 family machine "small enough to fit onto the departmental level" — a process expected to take three years — it will pursue its strategy of dominance through networking, Kutnick told the seminar attendees.

Kutnick predicted that the compa-

ny's local-area network will finally be announced in the second half of the year. A stopgap measure — a network designed for the Personal Computer — is likely to be made available at mid-year, the fruit of a joint development effort by IBM and Xerox, an Xerox firm.

"All the IBM local-area network will be a local physical implementation" of Systems Network Architecture (SNA), Kutnick maintained. And it is through SNA and the SNA-based Information Network that IBM is plotting to conquer the computer industry, he added.

By year's end, IBM had captured a 5% share of the \$4.33 billion computer services market, according to Yankee Group estimates.

## Local net, 'Sierra' uniprocessor expected from IBM in '84

**NEW YORK** — Nothing as dramatic as the Personal Computer or the PCjr is expected from IBM this year, according to The Yankee Group.

Big Blue's major new product offerings this year will consist of the oft-predicted and oft-delayed local-area network as well as the project code-named Sierra, a high-end uniprocessor-based machine capable of

obeying between 14 million instructions per second (Mips) and 19 Mips, Yankee Group researchers said.

The Boston-based consultants told attendees at seminars on "The IBM Impact," held here and in San Francisco earlier this month, to expect midyear, 15% price cuts on the 3061 and 3064 systems, along with higher maintenance costs on the 8035 family.

Other announcements said to be on the way include:

- Introduction late this year of a version of the Personal Computer, able to run subsets of System/36 operations.

- The unveiling of a Personal Computer with a built-in modem late this year or early next year.

- The release sometime this year of an MVS-like operating system to

encourage IBM's 20,000 DOS users to slide over to MVS.

- Availability late this year of a Systems Network Architecture support capability for the VM operating system.

- The marketing throughout the year of various enhancements to the Personal Computer, including a portable version, a different keyboard and a voice-input module.

**Lease the Digital LA12-C  
plain paper portable from MTI  
for \$83/month including maintenance.**

We are authorized distributors of Digital's terminals, printers and personal computers.

Digital's Correspondent is the most versatile portable around. It uses any paper, prints multi-part forms, prints up to 132 columns at 150 cps, full ASCII character set plus bit map graphics via a highly legible 9x9 dot matrix. There are five models of this versatile portable with different data communications capabilities. The C model has an integral 300 baud acoustic coupler.

MTI is one of the few Authorized Digital Terminal Distributors, so we can give you the best of two worlds; terminals, based on advanced technology from the industry leader, and the expertise and service from applications specialists.

Whether you buy, rent or lease our equipment, you'll find MTI to be the one source for all the terminals, peripherals, systems, applications expertise and service you'll ever need. At good prices. Call us today.

# MCBA is looking for some professional bill collectors.

More specifically, we're looking for some dealers who like money. Lots of it. Because when you carry our powerful, field-proven software, that's exactly what you can expect.

Why? It's quite simple, really. The quality of MCBA's library of 17 modular manufacturing, distribution, and accounting packages is attested to by over 15,000 users worldwide. In fact, it's really the only serious software of its kind available for mini and micro environments. Thanks to its modularity and flexibility, not to mention its comprehensive documentation. All of which has helped us develop and maintain successful relationships with dealers like you for over 10 years now.

This means you can establish a relationship with us and have at your disposal a comprehensive library of software packages. All of which can be mixed or matched to suit the unique needs of your customers.

And as your customers grow, they'll come back to you for more business. Because you can expand their systems with totally integrated packages that work with each other like the movement in a Swiss watch.

So no matter what size your customers are now, or what size they are tomorrow, your business keeps growing. And the bills (the green kind) keep pouring in. It might even get embarrassing.

So if you're a dealer who's in it for the money, call MCBA now at (818) 957-2900. You may not end up being famous. But you could end up rich.

# MCBA®

**Software that grows on you. And with you.**

# SDC employee charged with bribe attempt

By Patricia Kocis

**ALEXANDRIA, Va.** — A federal grand jury here has indicted a contract employee of Systems Development Corp. (SDC) on charges that he attempted to bribe a consultant to a Massachusetts state agency in return for help in securing an estimated \$2.4 million state contract.

The indictment, announced two weeks ago, also charges consultant H. James Errico with interstate travel in aid of racketeering and two counts of wire fraud. If convicted on all four counts, he could receive up to 35 years in jail and a \$31,000 fine. Errico has entered a plea of not guilty. The case is scheduled to go to trial March 19.

Errico is under contract with SDC to serve as both consultant and director of marketing, according to Bernard Fried, vice-president, general counsel and secretary at SDC. He said that top management is currently reviewing the case and is expected to decide soon whether to terminate Errico's contract.

"Just because someone is indicted does not mean he is guilty," Fried pointed out.

Errico is accused of promoting James R. Cantela, an industrial management consultant hired by the Massachusetts Welfare Department, with future consulting work with SDC in exchange for arranging to have the state contract awarded to the firm. The contract concerned development of a system called the Massachusetts Public Assistance Control System (Mpace), which will be used to man-

age several major welfare programs.

The alleged bribery attempt failed, and the contract was awarded to an SDC competitor, Comshare Co., last June.

According to a Welfare Department spokeswoman, the bribery attempt was reported immediately to the Massachusetts attorney general, who turned the case over to federal authorities because "it involved facts beyond the jurisdiction of Massachusetts."

**Medicaid contract threatened**

A subsidiary of Burroughs Corp., SDC was awarded in 1983 an unrelat-

ed \$40 million contract to automate Massachusetts' \$1.3 billion Medicaid program. That contract has been plagued with delays, resulting in at least two warnings from state officials to shape up or lose the contract. Superintendents from Errico's indictment could jeopardize SDC's Medicaid contract, even though that contract is separate from the one involving Mpace.

According to Welfare Commissioner Charles M. Atkins, if Errico is convicted, the state's contract with SDC has a provision allowing the state to terminate the Medicaid contract — something it has threatened to do

twice now.

The first warning was in August in an attempt to get SDC to meet its deadline for getting the system online [CW, Aug. 22]. More recently, SDC was placed on notice that unless it reduces its backlog of processing claims to a 14-day waiting period by March 5, its contract will be canceled.

In response, SDC has filed a 26-page plan to resolve its problems, including an agreement to increase its staff. Nonetheless, Welfare Department officials have estimated the Medicaid management information system has saved the state \$26 million since last September.

## Groups granted DPMA charters

**PARK RIDGE, Ill.** — Two new special interest groups in the areas of education and software maintenance have been granted provisional charters by the Data Processing Management Association (DPMA).

The Special Interest Group for Education will seek to enhance communication between industry and education and promote further development of the DPMA model curriculum for computer-based information system education in colleges and universities.

Officers of the group are Dr. Georgia B. Miller, president; Dr. Herbert Behnke, vice-president; and Kathleen T. O'Neill, treasurer.

Membership information is available from Miller through Indiana University, P.O. Box 647, Indianapolis, Ind. 46225.

The Special Interest Group on Software Maintenance will deal with the problems of enhancement, modification, upgrading, adaptation, tuning and correction of existing software.

Group officers are Dr. Ned Chapin, president; Barbara J. Tante, vice-president; and Nicholas Zvezintsov, secretary/treasurer.

Membership information is available from Zvezintsov, No. 6P, 141 St. Mark's Place, Staten Island, N.Y. 10301.

Now you can save on one-megabyte VAX-11/780 compatible memory boards from National. With availability now, you can cash in on our NS789 board at an unbeatable price. Identical to DEC's board in function and form, the NS789 has one-megabyte of 64K based RAM, a two-year warranty and spare RAM on board. And National offers an emergency loaner program if you ever need a replacement board.

Maximize your VAX potential. Expand your memory capacity with compact, reliable memory boards from National. We have the price and availability to get you started, with the service and long-term support to keep you going.

For complete NS789 specifications and the name of the representative/broker nearest you, call our Customer Support group toll free at 800-538-8510; in California, 800-343-4606.

The NonStop computer system is eliminating order management paperwork and shipping products faster than ever. The NonStop computer system is eliminating order management paperwork and shipping products faster than ever.

right on down the line to shipping. And, because the system is on line, other departments have immediate access to this information as well. Accounting, for example, now generates invoices automatically, resulting in much improved cash flow. Manufacturing is saving \$175,000 a year in internal freight charges due to the reorganization of ordering and shipping procedures, and the Group as a whole has been able to eliminate more than 300,000 reproduced documents a year.

Other system benefits include:

- better control of backlog inventory
- more accurate pricing information
- the ability to make detailed forecasts of market conditions for setting out purposes
- the ability to operate efficiently
- helping you achieve even more significant gains in plant productivity

**The NonStop System.** Ideally suited to online transaction processing, with continuous availability of up to the second information, the NonStop system

# A sure cure for the problem of information bottleneck.

Programming backlog is the source of the problem. Eliminate it, and you eliminate the bottleneck.

Which is precisely what Sperry has done with the MAPPER™ System.

With MAPPER, you work with the computer directly. You ask questions in plain English. And you get immediate answers.

And if the information you get raises other questions, you can ask them right away. With no delay for programming. Or reprogramming.

MAPPER is that powerful. It allows you to manipulate information in almost any way you want. And, interesting to note, it can even help your programmers become more productive.

## AN AFFORDABLE SYSTEM.

You don't have to be a large company to have a MAPPER System. MAPPER can be scaled to the real and present needs of just about any

size company. The cost of a MAPPER System makes it practical for even a department within a company to own its own system. Or you can time-share through a Sperry service bureau.

What you get for your money is a whole new order of efficiency in your day-to-day management tasks. Because you'll have the information you need right at your fingertips. Literally.

## SEEING IS BELIEVING.

We've made some promises here that may sound extravagant. But if anything, our claims are on the conservative side. And to prove it, we offer you the opportunity to see a demonstration of MAPPER at work.

## 800-547-8362

But first, you might want to look over our MAPPER brochure. A copy is yours for the asking. Call

toll-free: 800-547-8362 (9 a.m. to 5 p.m. E.S.T.). Or send us the coupon.

## Scofflaws nabbed at work by printout-wielding police

By James Connolly  
CWI Staff

INDIANAPOLIS — Armed with computer printouts, local police officers struck at bachelors, factories and other businesses earlier this month, rounding up hundreds of people wanted on traffic tickets and other misdemeanors.

The dragnet, coordinated through a pair of IBM 3081 mainframes, featured police arresting people at their places of work. The 165 well-publicized arrests in the first day of the program and more arrests in the days that followed inspired 2,500 other people to appear voluntarily in court to clear up outstanding warrants.

The 3081s combined information received from court and police data bases with information collected from another, unidentified source to determine up-to-date home and work addresses for 7,000 people wanted for misdemeanors.

"About nine months ago, we got together with the municipal courts and the prosecutors and found that we were successful in serving only one out of 26 warrants," said Indianapolis Police Department Lt. David Cupello. "Eighty to 90% of the time, the address on the face of the warrant was erroneous, and even where it was accurate, we had little chance of finding the people at home. So we started using various on-line systems to update the addresses."

To ease a backlog, officials offered a 60-day amnesty period under which 27,000 people named in outstanding Marion County misdemeanor or traffic warrants could surrender and pay their fines without risking imprisonment. Only 2,000 accepted the offer.

Meanwhile, the police and the court's 3081s, with software developed in-house, matched the names of wanted persons with places of employment and up-to-date addresses.

The source of that address information remains a secret. "We won't reveal it by agreement with those involved," said Cupello, who is also executive officer of the police department's data processing branch.

During the amnesty program, the police department mailed explanatory letters to 30 major employers to forward to workers who were believed to have outstanding warrants. Those letters warned the workers they were subject to arrest when the amnesty program expired on Feb. 1.

On that date, 35 two-officer teams hit the streets, armed with printouts with names and home and work addresses for 7,000 people. They rounded up 166 people that day.

Employers often let officers use personnel offices and summoned suspects there, rather than having employees handcuffed at their desks, according to Cupello.

With the publicity of the first arrests, 2,500 people voluntarily appeared in court within one week to pay fines or arrange for trials.

But all didn't run smoothly.

At least one of those arrested and booked under the glare of television news crews' lights was a woman who argued that she had already paid her speeding ticket. The woman is planning a lawsuit.

Municipal Court Judge Harold Kohlmeier interceded and barred further arrests unless the warrants were double-checked with manual files in the courthouses.

Now the officers receive updated and confirmed printouts of 100 to 200 names a day and, before making arrests, radio their dispatcher to recheck the name on the dispatcher's IBM 3270 terminal. "We suffered a temporary setback, but now we are getting lists back from the court and have some of our teams back in action," Cupello said.

## TSO USERS

### Compare these features:

- Up to 50% less overhead
- Full-Screen Editor (LRECL up to 4096)
- Data Set Manager (Controls TSO files)
- JES System Previewer (Direct from JES Spool)
- File listing facility (LRECL up to 32760)
- Programmable function keys
- Split-Screen facility (Two fully-active screens)
- Customer-defined exit facility (Controls all FSE+ functions)
- FSE+ tuning parameters (Optimize performance)
- Structured menus for new users
- Command oriented for experienced users
- MVS 3.8, SP and XA support
- Free trial period

## NEWS

INTERNATIONAL  
REPORT

  
CW INTERNATIONAL  
NEWS NETWORK

## AUSTRALIA

MELBOURNE — While Telecom Australia continues to debate whether to support a second standard on its proposed videotext service, Computer Power has unveiled a videotext service that will reportedly support both the UK's Prestel system and AT&T's North American Presentation Level Protocol System on the same terminal.

BRANSON — Labtam International Pty. Ltd. has abandoned its plan to incorporate Motorola, Inc.'s 68000 microprocessor in its three-processor system. Instead, Labtam will use National Semiconductor Corp.'s NS16088 chip in the system, which will run Q1 Corp.'s Irida as well as Microsoft, Inc.'s MS-DOS and Digital Research, Inc.'s CP/M operating systems concurrently.

## FRANCE

PARIS — OC France, a major copy machine vendor here, has become France's first user of the IBM 4361. OC's system, which replaced a 4301/2, includes 4M bytes of memory, six 3370 disk drives, two tapes, a line

printer and two 3274 controllers. It runs under DOS/VSE, but OC is planning a conversion to MVS.

PARIS — Thomson-BRAND recently started selling Eagle Computer, Inc.'s microcomputers here under the name Microgen 16. Thomson also markets Microgen 32, a micro developed by Fortum Systems Corp.

## JAPAN

TOKYO — Taking aim at IBM's 4361 system, NEC Corp. has introduced the mid-range Acoos 430 system. Capable of performing 1 million instructions per second, the 10-byte NEC machine is targeted for office automation applications as well as

computer-aided design. It runs under NEC's Acoos-4/AVP operating system. Options include a high-speed scientific calculation processor, an integrated array processor and a three-dimensional display. Although prices were not available, it was learned that the system runs from \$7,660/mo, about half the rental fee of a comparable IBM system.

OSAKA — Kodasaka, Inc., a leading software firm here, has unveiled My Letter Korean, a word processing system for Korean users that combines 2,000 Korean characters with 2,500 Japanese characters. The product was developed for NEC Corp.'s PC-6600; the two products are currently available as a turnkey system for \$6,100.

## NETHERLANDS

AMSTERDAM — Oscar Data has won an initial \$10 million contract from Sweden International, Inc. to supply software for Sweden's point-of-sale cash register systems. The software order is thought to be the largest yet in the Netherlands.

PEOPLE'S REPUBLIC OF  
CHINA

BEIJING — The Chinese government has ordered \$850,000 worth of microcomputers from Japan's NEC Corp. NEC will deliver 155 of its PC-8000 computers and another 150 of its more sophisticated PC-8600, which can display about 3,000 Chinese symbols and characters. The micro will be used for educational and agricultural applications.

## UNITED KINGDOM

LONDON — Rank Xerox appears to be well positioned to be a leader in the emerging European office automation market, according to a recent study by Frost & Sullivan Ltd. According to the study, the vendor has already distinguished itself as having an "enviable record as an innovator" with products such as Ezhernet and Star. But the report also maintained that Rank Xerox must win back the small copier market it lost to the Japanese during the 1970s and hope that IBM endorses Ezhernet.

## WEST GERMANY

MUNICH — IBM Deutschland GmbH and Siemens AG have signed an agreement to manufacture and market jointly storage peripherals. The pact initially calls for IBM to ship its 5380 mass storage disks to Siemens for its 7800 systems.

MUNICH — The German postal, telephone and telegraph (PTT) administration is reportedly trying to push through rate hikes for its Detelex-P and Detelex-L teleprocessing services. If the PTT is successful, customers will end up paying 60% to 80% more for the X.25-based service. The Ministry of Post and Telecommunications has yet to pass down an official decision.

SOFTWARE SPECIALISTS, COMPUTER SCIENTISTS,  
DATA PROCESSING SYSTEM ENGINEERS

The people at Hughes Space & Communications Group are proud of their major contributions to space-borne communications.

They are leading the challenge to new technical horizons.

There is a unique team spirit at Hughes Space & Communications Group. A spirit that has created a solid commitment to using advanced technology to develop better and more effective communication.

At Hughes, we know software is central to continued success.

Work with some of the most modern and powerful computer equipment and development tools. With top software experts in the field. On projects of vital importance.

It is hard to beat all the advantages that software specialists have at Hughes.

Two-thirds of all commercial communications satellites currently operating were designed and built by the people at Hughes.

Become one of these people with the Space & Communications Defense Systems Division. These are two of our many current openings:

**Electrical Engineer**  
Ability to design, interface, test and integrate digital hardware in data processing systems.

Must have capability in application of microprocessor and/or bit slice technology. Strong writing skills essential. Requires BS or MS in EE, 10 years experience preferred.

## MTS Programmer

Operating system programmer analyst to maintain and improve large scale computer operating systems in PWB/ENG Computer Center. Must have operating system support experience in DBC VM45 or UNIX/PWB. Requires BS in CS.

To respond to these and other openings, send resume to Ray Bevaqua at: Hughes Space & Communications, SA1/A300, Dept. WC-426, P.O. Box 92919, Los Angeles, CA 90009.

## SOLVE YOUR PROBLEMS OF INTELLIGENT MICRO TO MAINFRAME CONNECTION.

Get the answers you're looking for—with the VisiAnswer Software System from Informatics, the leader in mainframe to micro integration.

Informatics has teamed the best minds in the business to solve the problems of intelligent mainframe data access for microcomputer users. The VisiAnswer™ Software System is the breakthrough result of a unique team involving Informatics Corporate Micro Systems and VisiCorp® products working with IBM® Personal Computers.

**VisiAnswer solves the timely problems plaguing data processing professionals like you.**

Available for use right now, the VisiAnswer Software System is the micro to mainframe system specifically designed to help you:

- Manage and control the integration of microcomputers with your current mainframe—right in your data processing department.
- Provide your company's micro end-users with access to specific mainframe data—without wading through unrelated information for hours.
- Maintain security/control of restricted portions of your corporation's data.
- Supply end-users access to current "live" information, instead of information that's historical and obsolete.
- Intelligently access all mainframe data, whether it's unique application data or part of a data base management system.

**VisiAnswer makes your job easier and more efficient than ever.**

With more and more managers and analysts in your company using desktop computers these days, there's a tendency to improve the way they obtain the data they need. That leaves the door wide open for mistakes and inaccurate information.

Now you can avoid these problems and maintain a high level of data processing efficiency for everyone who needs access to that data with the VisiAnswer Software System. It delivers intelligent solutions that make current mainframe data available to your end-users in an orderly fashion. That makes their jobs and yours easier and more accurate—something upper management will appreciate.

**VisiAnswer was designed by the best minds in the business to fit your business.**

You get Informatics' expertise in data access technology and mainframe system software... plus VisiCorp's expertise in user-friendly

micro software. We chose the IBM Personal Computer for its leadership in delivering business solutions, and IBM chose us as a value-added reseller.

This system works with all data bases on IBM mainframe systems. And your end-users will get data that is immediately usable with all Visi Series® Products and other products utilizing the VisiCalc® file format.

Find out more about Informatics VisiAnswer system. Mail this coupon or call toll free today. See how VisiAnswer products can fit into your Personal Information Center as an integral part of your unique business strategy.

TURNAROUND  
TIME

LARRY E. LONG

**Q** Our marketing people have asked us to respond to technical inquiries from three of our large customers who requested directions that would permit them to transmit orders directly from their computers to ours. This seems only logical, since the volume of transactions generated by these three customers is staggering.

Here is the problem. My staff is already overcommitted for the next two years. Preliminary estimates of manpower requirements for the project range from one to three man-years.

While this project would appear to be extremely cost-effective and convenient for both us and our customers, surprisingly I'm not getting much pressure to move on it. Personally, I think that a consumer goods company such as ours should place this project much higher on the priorities list, but those who make these decisions disagree. What are your feelings?

**A** You did not send a list of your priorities, so I cannot make any relative statements, but I am certainly willing to comment on the importance of intercompany networking. Don't delay.

Before long, your small and medium-size customers will be demanding similar services. The trend is to capture data as close to the source as possible. Why not go directly to the source, that is, your customers' computer systems?

Intercompany networking is no longer a carrot that you offer your customers; it is a marketing necessity in some industries (yours included). I know that several of your competitors already offer this service. Unless you can convince top management to revise his priorities or create funds for additional resources, your company is running the risk of alienating customers and losing a share of the market.

**Q** For the past five years, I've had responsibility for the DP department (about 30 people). I'll be the first to admit that I've neglected it in favor of my primary responsibilities in accounting and finance.

Being in the public sector, we cannot keep up with DP services and, as a result, have lost most of our best people. With our current staff, our DP department is faltering.

Momentum is building to get out of the DP business and bring in a facilities management group. One such

group has proposed that they take over the entire DP operation. They said they can move into our present facility and use their software to do everything we are doing now, and do it for less than we are currently spending. Is this possible?

**A** Do what for less? It may be possible for the facilities management company to reduce DP costs and maintain the status quo over the

short term, but is that what you want? You are apparently not satisfied with things the way they are.

Implied in the company's proposal is that services over and above the existing level of service will be billed. Don't overlook this important cost consideration.

External operation of the computer center has proved a smart decision for many organizations, but not for all. You never "get out of the DP

business." Top management has an ongoing responsibility to relate information needs and priorities to the DP department. Whether run by an outside company or internally, it is top management's responsibility to provide strategic direction.

I detect from your letter that you expect to be absolved of further DP responsibilities once the facilities management company takes over. It doesn't work that

way. If you continue to be absolved from DP, then don't expect any quantum leaps in the quality of the DP services.

*Long, president of Long and Associates, is a consultant, lecturer and author in the field of information services. If you have a question you'd like him to address, send it to Larry Long, Editorial Department, Computerworld, P.O. Box 880, Framingham, Mass. 01701.*

## Standard sign language of DP terminology created

Cursor

Scrolling

By David Gliese  
OW Staff

**SAN JOSE, Calif.**—If Steven Jamison has his way, the nation's deaf computer professionals soon will be communicating with their managers and co-workers by using a new standardized sign language of DP terminology.

For the past 10 years, Jamison, a personnel consultant at IBM's Santa Teresa laboratory here, has recruited deaf college students for a summer work program conducted by IBM. In the course of that work, he became aware of the lack of any universal agreement on sign language computer terminology. For

example, three or four different signs are used for the word "computer" alone.

Convinced of the need for some standardized terminology, Jamison began in 1981 to compile a comprehensive glossary of DP terms in American Sign Language. IBM agreed to provide the time and money he needed to carry out the two-year project. Jamison's effort culminated last year with the completion of a 600-term glossary.

Those 600 terms have been compiled in an illustrated reference book titled "Signs for Computing Terminology," recently published by The National Association of the Deaf in Silver Spring, Md.

Jamison and the book's publisher expect that the book will be widely used by hearing-impaired students, teachers and computer professionals. They agree, however, that its greatest potential benefit may be for DP managers and others, who want to improve their communication with the deaf.

At IBM and other companies within the computer industry, many deaf persons work in technically oriented jobs, such as programming, in which the ability to hear is not as critical as in other fields.

But communicating with a deaf worker can be tedious if someone has to finger spell all technical terms, Jamison said.

## Panel of volunteers

To compile the glossary, Jamison recruited 24 associates to serve on an advisory panel for the project. Most of these volunteers were computer professionals; the majority were not only deaf but also skilled signers.

By means of mail surveys and a three-day workshop, the panelists reached agreement on which signs they preferred for all 600 DP terms. Jamison said the primary requirement for choosing a particular sign was the likelihood of its acceptance by the deaf community.

All publishing rights for the book have been turned over to The National Association of the Deaf, which will retain any proceeds from the book. S. Melvin Carter, director of the association's Communicative Skills Program, said the book has sold more than 2,000 copies during its first month of publication.

One company, Integrated Microcomputer Systems, Inc. of Rockville, Md., purchased 500 copies of the book for its employees and associates. More information about the book is available from The National Association of the Deaf, 814 Thayer Ave., Silver Spring, Md. 20910.

## VT-102

The Price-Performance Leader.

Qume's new QVT 102s VDU terminal has all the features of the Hamline 1500: Laser Sleigher ADM 3A/3, and TeleVideo 910 and emulates any of these terminals by single menu selection. Features found in higher-priced terminals are standard, including block and conversational modes, local editing, 25th menu line, menu wrap-up mode, and screen coverage printing.

The QVT 102 takes up minimal workspace and is designed to please the operator. Its non-glossy green or amber screen minimizes eye strain with a big 9 x 12 character cell. The screen fits and swivels for perfect viewing, and the low-profile keyboard is designed to allow placement for ideal reach and hand-over position.

Superflexibility. Comfort. And affordable price.

Qume Model 102 terminal includes the features

found in its class. Features include:

- Line block, Page block, and Unpredicted block transfer modes • Four separate function keys (twelve functions) • Line drawing graphics characters • Teletype, non-glossy, green screen (amber optional) • 9 x 12 character cell resolution, 7 x 9 character size • Douchable, low-profile typewriter style keyboard with numeric pad • 24 lines x 80 characters with a 25th menu/menu wrap-up line • Screen-wrap time out (an inactive terminal shuts off its screen after fifteen minutes with no screen data loss) • 5 video attributes: blank, blank, reverse video, underline, and half-intensity

Display Format

24 lines x 80 characters

25th menu line on line (optional)

## Bureau doubles output with micro-to-mini link

ATLANTA — By developing a communications package to link varied microcomputers with its mini-computers, a service bureau has doubled in a year the number of tax returns it processed for 400 accountants spread throughout five South-eastern states.

InfoServices, Inc. sought a way to provide the on-line power of its mini-computers to accountants who use more than 80 different types of microcomputers at remote locations. The company developed a software system that it said allows remote users

to utilize their micros as intelligent office machines that draw on the resources of InfoServices' Prime Computer, Inc. 680 supermini and Prime 400 mini, which are being replaced by a Prime 780 supermini.

The software, known as InfoComm, is a communications program which will run on the more than 200 microprocessors based on Digital Research, Inc.'s CP/M operating system, as well as microcomputers running under Digital Research's CP/M 86 and Microsoft, Inc.'s PC-DOS and MS-DOS, according to InfoServices Vice-President Bob Westerman.

The program permits the transmission of Ascii and binary files bi-directionally between the microprocessor and the host computer. It also provides a conventional mode whereby the microprocessor becomes a dumb terminal for routine interactive processing on the host system.

With clients in Georgia, Florida, Alabama, Tennessee and North Carolina, InfoServices maintains four divisions: a tax division, a time-sharing service, a division that markets InfoComm and a division that sells accounting packages. A focus of the service bureau operation has been the processing and laser printing of tax forms for professional accountants.

"Users throughout the five-state region who desire to do their own data entry use more than 80 different brands of micros running under more than four different micro operating systems to create tax data files.

"These files are then transferred to our Prime computers in Atlanta using our communications package InfoComm, InfoSoft, on the Prime. We then recreate on the micros the standard text editor available on the Prime so that our users do not have to contend with entirely different programs in their data processing work," Westerman said.

Users can process their tax returns interactively while on-line with the Prime systems. This reportedly gives them access to the greater processing power of the Prime minis and InfoServices' laser printers and access to current versions of software.

InfoServices support personnel can answer questions on specific returns by accessing the return on the Prime via in-house terminals and can monitor the interactive process while the user is preparing a return. After completing the return, the user can print control sheets and flag the return to be printed and delivered by InfoServices.

"We further capitalize on our customers' in-office computers," Westerman noted, "by providing tutorial programs that run on those microcomputers and that teach the user how to utilize our complementary system of micros and Prime."

He added that clients also use the communications system to produce financial statements and other reports, and that use of remote data entry decreases the time-sharing charges to customers who wish to have large computer power without a costly investment in hardware and software.

## The Micro Solution

Finally, there is a total solution for your microfloppy needs...

The Dysan 3 1/4" Flex Diskette.

It assures a source of high quality duplication services from Dysan's established production facilities.

It includes both alignment and Dysan's exclusive Digital Diagnostic Diskettes (DDD) for trouble-free drive operation and media interchangeability.

It utilizes a high performance, cost-effective and widely available media, selected specifically for microfloppy plug compatibility.

Its flexible jacket bonds without damage, and optimizes media lifetime in contaminated environments.

It is from the same company who manufactured the microfloppy with Shugart and the 5.25" Winchester drive with Seagate.

Considering supporting services, microfloppy compatibility, product availability and proven performance, it's apparent there is only one complete microfloppy standard.

The Dysan 3 1/4" Flex Diskette.

3 1/4" Flex Diskette is a registered trademark of Dysan Corporation.

## Query system allows utility to break 'language barrier'

**HICKSVILLE, N.Y.** — Computers can be confusing to people who don't use them every day, and part of the problem has to do with the "language barrier" that must be overcome before most computers can be operated.

For employees of the Long Island Lighting Co. (LILCO), the public utility serving the Long Island area, computers are becoming easier to understand — and work with —

thanks to an on-line software query system that allows users to interact with computers by using conversational English terms.

LILCO runs the Intellect software system from Artificial Intelligence Corp. of Waltham, Mass., with IBM's CICS teleprocessing monitor on an IBM 9083 in an MVS environment. Using Intellect, employees can access information on the complete listing

of all computer equipment owned or leased by LILCO, current employee applications on file and the entire fleet of customer service vehicles.

When users log on to the system, they are greeted by the following message displayed on the screen: "Dear Mr. [name], administrator of LILCO's Office of Computer Services here: 'Good morning. Welcome to the world of self-service computing. We'll try to answer all the questions you pose. Don't be afraid to try.'"

Then, instead of relying on a complex series of commands, users draw data through Intellect with English-language commands. The system requires no programming or use of codes and imposes no requirements for structure, syntax, punctuation, definitions or key words, Weidman said.

"It's just like talking to a person," he explained. "Suppose you wanted to know the number of applicants on file for a position in the customer relations department. By gaining access to the applicant's file and typing, 'Tell me how many people have applied for positions in customer relations,' the system responds with information such as names and addresses, education, application test scores, interview dates and the other details you would need to make an initial evaluation of the applications on file."

Before LILCO installed the Intellect package, its data security staff developed a front-end security system which requires comprehensive user identification, according to Weidman. In addition, Intellect's dictionary of data terms is constructed so that only users with approved security codes can gain access to the system. Once the appropriate security codes are fed into a computer terminal at LILCO, however, the user need only type in the questions, and Intellect will do the rest.

"If you aren't sure what information you would like to have," Weidman said, "you only have to ask the computer, 'What information is available?' and Intellect will provide a complete list. You can continue asking questions to obtain even further details about the applicants on file, for example, or you can go on in a new subject by simply asking a different question."

That ability to link a continuing series of questions is the key to the system's functionality, Weidman said. "In the past, users had to depend on preformatted reports, or they had to send their requests for additional information to the information systems department, which

would then generate a new report. Often, the answers to a question triggered other questions, which would also have to be answered in the same time-consuming way.

With Intellect, the user asks questions directly and gets an answer right away."

User responses to the Intellect system has been encouraging, Weidman said. "It provides decision-making information quickly. It's a

very flexible system with no rigid ground rules, and the computer dictionary can be expanded to suit the terms used by different departments."

LILCO plans to expand the use of Intellect to other corporate applications. "This type of people-friendly program will allow more people to take advantage of computer technology," Weidman said.

### ADDERS Data Entry BEATS ALL OTHER DATA ENTRY SYSTEMS

COMPARISON  
OF ADDERS DATA ENTRY SYSTEMS

**Adding Adders/Basic Entry** runs on existing 3270 terminals under CICS or stand alone in personal/minicomputer mode. End users can use all their own input devices to manipulate documents. No additional hardware needed.

**Personalizing ADDERS/Basic Entry** offers all the functions of the best key-to-task systems plus on-line power and direct data entry.

**Cost:** ADDERS/Basic Entry provides your resources by removing the need to upgrade hardware and making optimum use of your machine's power.

**ADDERS/Basic Entry** provides the missing link between today's heavy systems and tomorrow's on-line applications.

### V.35 MODEM ELIMINATOR WITH 56 Kbps

DEI gives you new possibilities in in-house data transmission with our Modem Eliminator (MME). A self-contained, standalone device (rack mount version available), one MME does the job of two synchronous voice grade or wideband modems. Take a look at MME's capabilities:

- Data Rates — 1200 BPS to 76.8 Kbps & 56 Kbps upon request
- Optional Data Rates — Up to 1 megabit
- Interfaces — RS-232, RS-449, V.25

DEI also offers the ME-1 a Modern Eliminator with 2400, 4800, 9600 and 19.2 Kbps. The ME-1 standalone model is completely compatible with RS-232C (CITT V.24). All DEI products are operator-oriented and backed by the DEI five-star guarantee of quality and service.

**Run With Us**

# VIEWPOINT

## Tweedledum vs. Tweedledee

### LEIGHT ON SCIENCE

CHARLES P. LEIGHT

My purpose is not to judge the merits of allowing an American computer look-alike industry to function. The fact that it is here and has been for a few time means that our various watchdog and regulatory agencies are comfortable with its efficacy and are reasonably confident that they can handle the unique problems associated with it.

But the increasing number of litigation-bound cases we read about wherein the charge of copying figures as the central issue is rather unsettling. The very existence of such allegations lessens our enthusiasm to consider a look-alike manufacturer's wares for purchase because of our fear that the companies that make them may be in for trouble. Too much success may, paradoxically, guarantee it.

Look-alike is waaaaa, as you can imagine, involve a wide variety of copying and/or just plain lifting charges. These include the gross no-no's of blatantly replicating another company's logo and affixing it to a shamelessly manufactured version of its patented products or distributing, without permission, outright duplicates of another's software's proprietary and copyrighted work to segment otherwise original developments.

The battleground between "look-alikes" and "real-things" seems hottest, for the moment, in the area of software. The kind of event reported in the article "Taiwan court sentences six for 'bad Apple' [CW, Feb. 6], in which six Taiwanese computer executives were sent to eight-month prison terms each for copyright and patent infringement of Apple Computer, Inc. software, lets us know how serious world resolve has become to stop piracy in our industry. The previous week's coverage of IBM's victory against two companies who, according to *The Wall Street Journal*, were violating copyright law by offering an IBM Personal Computer look-alike along with IBM software from the real thing confirms this, however we may be inclined to sympathize with little guys trying to make a buck, we cannot condone their doing so with other people's property.

We can, of course, truly sympathize with honest look-alikes, those whose products confirm current legal opinion on how they must behave. Even if they fully adhere to the letter of the law, it is clearly still dangerous to create a truly compatible product. Not only do you have to survive the supreme tests of software and user program trans-

ferability between their tweedledee and your tweedledum, but if you do it so well, the likelihood is that a larger test is in store: survival is court against the manufacturer whose system you so admired that you made one in its image.

Then, as you can imagine, life for the look-alike manufacturer isn't easy. Only the toughest can survive its pitfalls. Each successful product can expect to be subject to the closest scrutiny of a chorus of attack lawyers clamoring to contest that you copied it. To minimize the possibility of a truly unfavorable legal outcome, corporations building look-alikes may be well-advised to build, as well, their judicial pleas for innocence, if charged, and inexperience, if convicted.

### What's going on, what's possible

While each such manufacturer must surely devise a strategy in its own image, it is always prudent to see what others are up to before building anything, so without further ado, I offer the following as a sample of what's going on and a mid-game of what's possible. Because of the possibility that this sampler may be seen as an attack on the practices of certain specific companies by their over-attentive attack lawyers, I wisely present it under the guise of advice.

First of all, don't make the look-alike system yourself. Assemble it if you must, but for the Lord's sake, don't make anything. Subcontract the entire system so that if by accident your look-alike turns out to be the real thing, your hands are kind of clean. Potential subcontractors should clearly include those already making the real thing for its manufacturer; subcontracting seems to be in vogue these days, so finding them shouldn't be too difficult. I advise the chosen subcontractors to, in turn, subcontract the look-alike manufacturer's work to eligible export companies; companies that know little more than how to deliver their products and that ask no questions.

Now that you've established your manufacturing plan, it's time to bring your look-alike to market. First, boldly "take out full-page ads everywhere on TV and the better. Show for six months two identical bananas side by side, but provide no text. Next, test the climate for introduction of your product as a hesitant swimmer tests the water temperature with his toe. A trade show, like the Consumer Electronics show, is best for this purpose because you can make a gigantic splash without actually "demonstrating" anything. A smart giveaway should generate enough excitement to bedazzle booth attendees. I suggest a mirror on

which is inscribed in bananas "My look-alike and me," suitable for handouts or handouts. Employ the Dallas Cowgirls to pass out banana business and do so as near to the real-things manufacturer's booth as you can get. If the Cowgirls aren't lobbied by a team of attack lawyers, you're going close to a safe introduction of your real thing.

Call a press conference to reveal the banana mystery. When the press is assembled, have a Cowgirl roll a gigantic banana — a slipper running along its length — out on the conference room floor, then slowly unroll it, letting an apple — preferably a McIntosh — plopp to her feet. Check faces for outraged litigious looks while she shoves the apple back in its skin and, with a Cheshire cat grin, reveals the banana.

Your secret is out. Now there's an burning bomb: Honest look-alike or not, prepare for war. Immediately confuse any lurking enemy by engaging in guerrilla tactics for as long as possible. Have Chiquita Bananas' granddaughters rush out in the press and apologize for all bananas everywhere. Have a kid dressed as a peasant start to squall. Must bring in an Eve to give Adam yet another apple to bite. Have an eagle swoop down to peck at the squalling peasant. Have a midwife with a slaughter the women by killing the eagle with a sword. You get the idea.

This is the moment of truth: the demo. Quickly and quietly slip Macrosoft-DOS into the computer — preferably a real thing camouflaged to look like the look-alike you're announcing. If everything works out, your product is in the clear, and you're ready to try your hand at real commercial success.

If not, get the hell out as soon as possible. Reveal F. Lee Bailey. Make a donation to John Glenn's campaign to establish your astronomical innocence. Disavow any connection with your product. Act like a Silicon Valley millionaire tired of cringing socialism and the mealybugs sprouting it in Washington, D.C., and dedicate yourself to fight for America's return to the principle of the freest of enterprises — the liberty to produce anything at anytime by anyone, no matter who owns it. Go on TV and demand this — or death.

All right, all right — you may think these practices I advise to be excessive. But after all, warding off attack lawyers isn't easy. Oh, by the way, any thing, word or idea in any "advice" that suggests an actual firm or product, living or dead, is purely coincidental.

Leicht is chairman of Leicht Sciences, Inc., a New York-based think tank specializing in computer and communications technologies.

### LETTERS TO THE EDITOR

Continued from page 24

ports. And then there is the impact of the war being waged on the country by the large U.S.-financed "Contra" army in Honduras.

This, perhaps, is what makes it what the author calls "one of the least desirable places for computer professionals."

Nicaraguan programmers and other DF personnel cannot in the near future live a technology beyond their means, but they can make substantial contributions that can palpably improve economic performance and the standards of living. They can, as essential human resources, also participate in such trends as the "innovators movement."

Employees recognized by their peers as contributing new tools, processes or solutions receive government support in the way of access to workshops, research facilities or special education with which to develop their ideas.

Needless to say, computer professionals here can influence policies that will enhance peaceful opportunities for their Nicaraguan counterparts.

### Some more 'reasonable' ideas for marketing personal computers

I would like to comment on Jack Stone's article "Where are the knowledgeable micro retailers?" [CW, Jan. 30]. For some time now, Stone has requested his "frustration, anxiety, depression and irritation with personal computer retailers." Apparently, Stone has convinced himself that all of his ideas for interfacing computers are rational and reasonable.

So now Stone wants to dump his random-access memory into a cassette recorder and load the data into his Processor Technology Sol 20 host. Never mind the fact that even *Byte* magazine has not had an ad for a Sol 20 for several years; any self-respecting dealer should stop training his service technicians and salesmen on current computers and focus on the good old Sol 20. Boy, my local dealer would love that. Why, I bet that the closest Sol 20 owner to Iowa is probably in Texas.

And a cassette dump. Wow! Of all of the personal computers that are sold in this area, but the there must be one or two with cassette interfaces

in this day and age.

Now that Stone has settled on a spiral notebook and three pens, let us focus on his other needs for his trips abroad. First, we'll need a vehicle able to travel in the Sahara under high noon and to roam Antarctica during the winter. It must be able to fold up into a suitcase and fit under an airline seat, but it must be able to pull three tractor trailers filled with clothes, dime novels and back issues of *Computerworld*. Let's see, each ball-point pen should be capable of automatically erasing simply by aiming at the offending errors and rubbing the pen between the fingers. Not state of the art, but it would be quaint enough.

The notebook should be able to make duplicate copies of itself by being placed under a pillow at night. For two copies, use two pillows, four copies, four pillows and so on.

Hope these ideas will help Stone in his trips around the world. Certainly, my ideas are as reasonable in today's high-tech world as Stone's ideas of how personal computers ought to be marketed and sold.

## Caricature of user needs redrawing

In Jack Stone's article, "User emancipation from Big DP Brother: 1984" (CW, Dec. 26/Jan. 2), Stone is, of course, writing for an audience of DPs. But I feel he is being insensitive to the needs and aims of users.

Stone has caricatured a user as a DP ignoramus whose only objective is to "get control over the data processing establishment." He speaks as if users view DP as an end in itself and as if users "demand... support of computing machines, software, documentation, training and supplies" only to frustrate the DP manager. And though users always have a lot to learn about DP, I doubt if they have to be "straightened out."

What I don't think Stone realizes is that users are not trying to use their microcomputers to replace the DP establishment, but to supplement it. Micros are sophisticated tools that can quickly return dividends of increased productivity. There will be problems of data compatibility and a proliferation of data bases, but one must remember that these data bases are out there anyway, manually, though they are called ledgers, indexes, reports or lists — not data bases.

A clerk now using an electronic spreadsheet is doing the same job as he had been doing manually only now he is doing it faster and more accurately. A manager who develops a data base management system application on a microcomputer to handle a few thousand records is doing no more than his staff did before with index cards and file boxes, but is now doing it faster, cheaper and more accurately. In both cases, it would have been inefficient to have the DP department develop applications on the mainframe.

I am sure that the picture painted by Stone in his article is true somewhere, but I think it's the exception. Though there are some users resistant to learning data processing terminology, most try to understand as best they can. Their interests will always be, though, in the ends, not the means. As far as getting "answers to their trivial technical questions in the documentation" and "not... entering the DP department," maybe Stone should offer a course in computer-ese; it is normally the manual not being aimed properly at its intended user, not the intelligence or diligence of the user, that is at fault.

It is time that we stop talking about the user vs. the DP

establishment and start talking about how users working with the micro hardware and accompanying software can, with the help of the DP department, reach a company's goals. It is the elimination of

the waste of human resources doing tedious tasks manually that the use of micros can achieve that should consume one's efforts.

# How new micro users convert to DP faith

## HUMAN CONNECTION

JACK STONE

It is almost eerie how consistent the conversion process is by which first-time personal computer users shake off their numbing ignorance of the technology and fly high the banner of competence.

I thought it useful to share some empirically derived thoughts about this subject in the hope that an increased awareness of such transitions will help your dealings with the user establishment.

Here are the stages of the process

that I have identified.

**Stage 1: Wonderment.** Many industry followers suggest that a large number of new users suffer violent mental agony — cyberphobia — as they begin to approach the subject of automation, with the obvious implication that systems analysts or trainers require near-Freudian capabilities to deal with such users. I believe that the number of new users with deep-rooted psychological problems with computers is very small, in spite of all the media hype to the contrary. I think the situation is much less complex: The vast majority simply wonder how automation will im-

prove their lot in life and, given the opportunity to become users, whether they will do well and perform well on the job. The psychological situation is not terribly different from that which results from other major changes in one's career, such as obtaining one's first job or becoming a manager for the first time.

However, users are psychologically vulnerable during this period and are unduly influenced by what they experience. Machine breakdowns, boring instruction, abstract systems documentation and irrelevant applications tend to lessen confidence in users' abilities to cope and interest in

moving ahead. It's most important that new users work with soundly designed systems in this stage, otherwise their desire to pursue an automation program will diminish, and their dealings with the DP community will be strained.

**Stage 2: Disorientation.** As a sometime trainer of users, it is no less than a thrilling event when my students succeed at the simplest of DP chores, like printing out their first word processing documents or observing the results on the monitor from their first data base queries. Expressions like "This is fantastic" and "I can't believe it!" permeate the classroom and give a terrific boost to all the students, giving rise to stronger beliefs in themselves and their expectations of meeting the training challenge.

For this and other reasons, I believe that the early phases of user training, both in the classroom and on the job, should emphasize personal achievement and not notions of fancy advanced technology. In literacy training, the impact on the student of presentations of highfalutin advanced technology — like movies of global command and control systems — is negligible compared with the victory of a first-time paragraph move during a hands-on word processing exercise. For this reason, the personal computer is ideal, because it provides a total systems environment under complete control of the student.

**Stage 3: Achievement.** The conversion process is complete when new users see output that directly relates to their jobs pour out of a machine — power on the premises, as it were. They are exhilarated, if not heady, by the obvious productivity gains inherent in well-designed systems, and many are positively giddy about prospects for the future. Continuing achievements lead to a growing sense of "maturity" and independence.

However, for some users, this results in misplaced beliefs that they can do completely without the data processing department. For this reason, at some point during this stage, DPs should step in with a program — seminar, briefing, whatever — to bring users into the arena of production systems, sobering them up with notions that they never considered before and steering the user maturation process toward more realistic goals.

Letters to Stone should be addressed to him at P.O. Box 55699, Washington, D.C. 20055.

## The system that lets you forget to remember.

All you do is tell the NCR 5300 Computer Output Microfilm (COM) recorder how many duplicates you want. Then forget it. The recorder tells the new in-line duplicator what's needed. And that's what you get, completely collated.

All that without operator intervention. And at the fastest speeds you'll find in any COM system.

The system is flexible, too. You can choose between wet or dry-silver recorders. And

## VIEWPOINT

## Mid-range computer market here to stay

### MANAGE PLATFORM

DAVID  
MILGROM

Regarding Charles P. Lecht's article "U.S. computer industry: 1984" (CW, Jan. 9), I think Lecht's crystal ball needs some window. Perhaps the following considerations will help.

Concerning supercomputers, current designs are not "really high-powered stuff," which is why the market for such devices remains relatively small. Most installations are unable to make cost-effective use of array processing architectures. What is needed in most superlarge installations are parallel architectures that are not dependent upon data homogeneity. We will see more solutions to this. The marketplace demands it. However, they may not look very much like supercomputers; they may, in fact, look very distributed data processing-like.

The mid-range computer market is very definitely here to stay. Corporate users want to model all their business activities in their information systems. One particularly effective way of doing that is to provide appropriate information processing power at each corporate level. As long as vendors can provide cost-effective mid-range machines, users will find many places in their organizations where they can be put to profitable use.

It is not that "the advantages of centralized data processing will be rediscovered," since we never lost sight of them. What is true is that we have not yet paid enough attention to the advantages of making firm follow function and making capacities match responsibilities.

I sincerely doubt that we will end up with a world in which anything less than a mainframe will eventually "metamorphose into the dumbest terminals possible." Instead, I see an ever-expanding profusion of novel devices designed to solve various aspects of the problem of getting computers to communicate with people on mutually agreeable terms.

#### Here to stay

Anyone who says that programming is going to disappear betrays a lack of understanding of what programming is all about. Programming is the art of finding a solution to a problem by effectively applying whatever tools are available. As long as there are problems to be solved and tools to solve them, programming is here to stay.

The question to be asked is: "Who can best program

the solution to a particular problem?" The answer is that a solution requires:

■ A clear, urgent, expert-level understanding of the problem.

■ Familiarity with the capabilities of the tools.

■ An adequate distribution/implementation/support system.

It may well be that no single organization has the three requisites to solve the problem, in which case a cooperative agreement must be worked out. Since the motivation for solving the problem ultimately rests on the one experiencing the problem, my suggestion is that users become more aggressive

in actively creating such agreements with vendors.

I agree that users do not want to reprogram a problem that has already been solved. But they will be forced to as long as they rely upon in-house software development. This appears necessary in the current environment because independent software

vendors as a group do not manifest adequate stability. The reason for this is that copyright, patent and trade-secret laws remain ambiguous with respect to software. The software industry's growth will remain stunted and deformed until its product is adequately protected.

The issue of the use of nat-

# NEW FROM CINCOM: THE MANAGE USER SERIES™... MAINFRAME PERSONAL COMPUTING POWER WITH DP CONTROL.

## VIEWPOINT

ural language to communicate with computers is an extremely complex one, because the communication process is one of the most difficult tasks people must perform daily.

We do it so often we take it for granted, but with computers we cannot.

I would characterize communication as a trial-and-error process in which the sender of a message attempts:

■ To identify the software.

■ To attract the attention of the audience.

■ To instill curiosity in the audience, making it receptive to the message.

■ To transmit his message using a syntax and vocabulary understandable to the audience.

■ To test if the message was correctly received and is being acted upon.

Since communication

problems manifest themselves in decidedly different ways in computers vis-à-vis people, it is not at all obvious that we want to communicate with them in the same casual manner that we communicate with people. In fact, even among people, we often restrict the communication process to minimize ambiguity (for example, printed forms, style and size restrictions on e-mails and contracts in writing and so on).

I am not saying that we will not continue to make computer interfaces more English-like and to use dialogs where appropriate, including vocal input and response units. What I am saying is that language restrictions are inherent in the communications process and will never go away; not in 1984, not ever.

Any discussion of computer interfaces in 1984 and beyond would be grossly incom-

plete without mentioning that the use of menus and windows in combination with various pointing devices will continue to prove to be extremely popular and cost-effective in many computer interfaces designs. Graphics will also increase in popularity as costs diminish and interfaces become more convenient.

Putting things in perspective, I would have to say that there will never be a time when Cobol will go away, to be replaced by apparently unrestricted English. We will continue to want a rich interface environment in which programming languages and natural-looking query and command languages will each have a small but significant part.

Lobbying efforts

I strongly disagree with Lecht that the thrust of lobbying efforts by American electronics companies is or will be "to prevent the sale of Japanese electronics in the U.S." Instead, I see the thrust of lobbying activity as being to arrange appropriate financial and legal support for advanced basic electronics research in this country.

What could we possibly gain from preventing Japanese sales here? The market is a global one, and restrictive U.S. laws cannot hope to do anything but remove the U.S. from participation in it. (If I want to buy Japanese components and U.S. law says I cannot, then I will buy them in Hong Kong, Singapore or Taiwan and move my assembly operation there.)

I think Lecht needs to get out of his think tank a little more often and see what real users' real problems are and what real vendors are really doing to address those problems. As IBM has proven for years, users are not impressed with the latest technology; they want their problems solved. When I do this, seeing things from a more global perspective practically always enhances clarity.

# MANAGE USER SERIES

Cincom's new MANAGE USER SERIES™ combines the benefits of personal computing capability, mainframe power and greater data processing control into one comprehensive Decision Support System.

## Personal Computing On The Mainframe

Simply explained, the MANAGE USER SERIES is Cincom's family of integrated mainframe software tools that work together as one powerful Decision Support System. No other software vendor offers such a wide range of Decision Support capabilities at the mainframe level.

Using the power and accessibility of the mainframe, MANAGE enables data processing to provide a wide range of personal computing capabilities while maintaining control over the corporate data resource. And because MANAGE has a conversational, user-friendly personality, it easily wins friends among end-users.

## Powerful Decision Support Tools

currently integrates four powerful tools that allow end-users to access, store and use production information from the corporate mainframe to aid in key business decision making:

- **MANTEXT** is a sophisticated free-form text processing system that enables users to access corporate files for the creation of business documents and corporate mailings.
- **MANGRAF** is an advanced business graphics tool that provides output from on-line applications through centralized production data base information.
- **MANCALC** is a 3-Dimensional electronic spreadsheet that facilitates "corporate-size" models and can automatically load information stored in

corporate files, or build models based on private data as well.

- **MANTIS** is Cincom's industry acclaimed application development language. As the "integrator" of the MANAGE USER SERIES, MANTIS provides an effective bridge between the Development Center and the Information Center.

## End-User Productivity Through Integration

The key to the power and versatility of MANAGE is its elegant integration. MANAGE provides the tools needed for preparation of business reports and day-to-day decision making. And because all components of new Cincom software technologies. From data base to application software to Decision Support, the name Cincom has come to stand for excellence in software technology the world over.

## Another Major Cincom Technology

Like TIS,™ ULTRA Interactive Data Base System™ MRPS™ and MANTIS™, MANAGE USER SERIES is a member of the integrated family of new Cincom software technologies. From data base to application software to Decision Support, the name Cincom has come to stand for excellence in software technology the world over.

MANTEXT - Text Processing

MANGRAF - Business Graphics

MANCALC - Spreadsheet

## Will Teradata revive a market?

### SOFTWARE

PAUL GALLIN

Just when many software observers were ready to perform last rites over the data base machine market, Teradata Corp. surprised us last month by announcing a large-scale data base machine capable of handling trillion-byte data bases at speeds of up to 400 million instructions per sec (Mips). In an unusual departure from tradition, the company also announced that it had already installed about a dozen of its DBC/1012 machines in large DP shops.

The announcement will, no doubt, enliven the discussion that has persisted for the last three years about the viability of this intriguing, but so far unpopular technology. Since Britten Lee, Inc. announced the first commercially available dedicated data base processor in 1980, only a few vendors have ventured into the market. With the exception of Intel Corp., none of them are household names.

Vendors are understandably skittish about IBM's unpredictable pricing policies and improvements in hardware price/performance in general. In the large-scale data base machine market, "hardware cost won't be a factor. The important thing will be the performance of the relational model data base," said Vincent Rausino, manager of new product development at Data Decisions, Inc. in Cherry Hill, N.J.

IBM made that distinction clear last year when it announced DB2, its relational data base management system (DBMS) for IBM MVS installations. DB2 works as an adjunct to IBM's IMS DBMS and requires a copy of the production data. The implicit message was that large shops will be willing to pay the hardware price in order simply to get data to their users in a usable fashion.

However, Teradata appears to have covered many of the criticisms leveled at data base machines. The company has

See DBMS page 46

## University launches 'Turing' Language boasts modular programming techniques

By John Galtner  
Of Staff

TORONTO — A member of a University of Toronto research team that recently developed a new general-purpose programming language may one day be a very wealthy man.

"Dave, I might get rich," Richard Holt laughed. "I think we stand to make a great deal of money from this. But we try to think of ourselves like Beethoven, writing the world with his music rather than like Mick Jagger just making money."

Chairman of the university's Computer Systems Research Group, Holt joined forces in 1982 with fellow computer science professors Jim Orlow and J.N.P. Hume to develop the Turing computer language, named in honor of British mathematician and computer theorist Alan Turing. The Turing language, according to Holt, is simpler than Basic, more powerful and elegant than either Pascal or PL/I and offers debugging, portability and modular programming capabilities that outstrip all three.

Turing was born out of an intensive one-year development effort and is currently being used and studied by some

3,000 University of Toronto computer science students. A textbook on the language is being marketed through the Association for Computing Machinery, according to Holt.

The Computer Systems Research Group last month began marketing a Turing compiler for Digital Equipment Corp.'s VAX-11 superminis under Version 4.3 of Unix. Compilers for IBM 370 processors and the IBM Personal Computer are slated for release in the near future.

Not yet for business

As a general-purpose language, Holt said, Turing is useful for basic data processing, microcomputer and scientific applications, as well as for programming that involves data structures and link lists.

In its current form, however, the language is not designed for large, business-oriented DP shops. "It's not as good as Cobol for large file processing applications or for those applications that utilize dollar-type scaled integers," Holt admitted.

"You could use it and it would be better than Basic or Pascal, but whether you could convince people with a large invest-

## Needs of the '80s will alter training

First in a two-part series

In many organizations, a "programmer trainee" is considered at best a necessary evil and at worst a lower form of life. This is in spite of the many desirable traits of trainees. These include few ego problems, willingness to work for low salaries, few technical bad habits, potential for several promotions, high probability of loyalty to the firm and willingness to work hard.

Many "experienced" programmers not only lack these characteristics, but also often overvalue their obsolescent skills. Trainees are traditionally unpopular because they:

■ Can't start programming on Monday.

■ Require training overhead (the trainee's own time plus the time of experienced staff).

■ May have no interest in, or potential for, the work.

■ May leave the firm as soon as the training is over.

These are real issues. Dealing effectively with the first two issues requires a planning process that is adhered to. Weeding out those with no interest or aptitude means avoiding taking trainees right off the street and putting them into

# How To Implement The Best New PC Decision Support Software With A Pair Of Scissors.

☐ YES. Tell me more about The New Context MBA and The Corporate MBA.  
☐ Have a Context representative call me.

Name \_\_\_\_\_

Title \_\_\_\_\_ Company \_\_\_\_\_

Address \_\_\_\_\_

City \_\_\_\_\_ State \_\_\_\_\_ Zip \_\_\_\_\_

Area Code \_\_\_\_\_ Phone Number \_\_\_\_\_

SEND To: Context Management Systems, 23068 Hawthorne Blvd., Torrance, CA 90505.  
Or call us at 1-800-487-1815 (in CA, call 1-800-558-3297)

Now it's easy to select the right decision-support software for the PC users in your company.

The New Context MBA™ and The Corporate MBA™ both have all the functions PC users in your company need: Spreadsheet, Business Graphics, Database, Word Processing, Telecommunications, and Forms Creation.

They're all *integrated* in one software package. With advantages that'll make your life a whole lot easier.

Like full 3270 emulation. So you can connect their PCs to your Data Center network. For immediate, yet controlled, access to decision data. No more hand-holding or custom programming.

PC users in your company get the decision-support capability they need from a single, easy-to-learn package. And you get an *easy* way to plug one PC software package into the entire company.

Our Context 500™ support team builds a custom training and ongoing support program for your company, so you don't have to.

Now your job of supporting our software is as easy as picking up the phone.

So make it easy on yourself. Cut out, fill in, and send us this coupon. And cut out a lot of heartburn over which of many PC software packages to choose.

Now where did you put those scissors?

# Adesse enhances packages for VM operating system

The Adesse Corp. has announced a series of enhancements and updated releases of its software packages for use with IBM operating systems.

Adesse announced Release 1.3 of its CMS Band/Write OS Daid (Direct Access Storage Device) Support system, which incorporates support for IBM's CMS/SP Release 3 operating system. The system reportedly permits a CMS application to write files on IBM OS-format disks. It can be used to write on disks that are also used by IBM's OS, VS or DOS operating systems.

Adesse also announced a transferring system.

In addition, Adesse announced that its VM/SP Enhanced Page Migration (EPM) system is now supported in IBM multiprocessing or dynamic processing environments under VM/SP Release 3 and Release 2. EPM also supports Release 3.3 of IBM's VM/SP High-Performance Option.

Adesse also announced its VM/SP Shared File Directory Facility (SFDF), which reportedly eliminates duplicate storage associated with

read-only CMS disks by permitting one copy of the File Status Table entries for a disk to be shared by all users who access it. Also, the firm announced the Single System Image (SSI) control program for use with Release 3 of VM/SP.

The system is said to manage the resources of IBM and compatible 370, 4300 and 30 series system complexes to provide multiple users with virtual machine facilities. According to the vendor, SSI is a comprehensive facility that allows several VM pro-

cessors to appear to the user community as a single CPU.

CMS Band/Write OS Daid Support is licensed for \$150/mo per CPU or can be purchased for \$6,000; EPM is licensed for \$350/mo and can be purchased for \$4,000; SFDF is licensed for \$100/mo and can be purchased for \$1,000; and SSI is licensed for \$4,500/mo and can be purchased for \$100,000.

Adesse can be reached through P.O. Box 907, Ridgefield, Conn. 06877.

## SYSTEMS SOFTWARE

### BOLLAND SYSTEMS CORP. BSF Version 2.4

Bolland Systems Corp. has released an enhanced version of the software portion of its information resource management product.

Version 2.4 of Strategic Systems Planning (SSP) includes an additional 18 reports, addressing the development of an information requirement dictionary and enhances the error-checking process during data entry, a spokesman said. It reportedly provides improved user control of the clustering threshold used in defining the information structure.

BSF runs on IBM or IBM-compatible mainframes under IBM's OS/VS operating system. BSF Version 2.4, including software, method, education and documentation, is priced at \$80,000.

Bolland Systems, 2131 S. State St., Ann Arbor, Mich. 48104.

### NORTH AMERICAN SOFTWARE Jobquest

North American Software has announced Jobquest, a multiple job queue package for the IBM System/34 and System/36.

According to the vendor, Jobquest boosts IBM's JOBQ function throughout in a mixed job environment, such as IBM's Mispics (Manufacturing, Accounting and Production Information Control System) and DPAS-II (Distributed Financial Accounting System).

Jobquest was designed to conform to IBM system and screen-based techniques. Suitable for any JOBQ job, the system features job conflict resolution, four-level security, power-fail restart, performance testing and automatic Operator Control Language conversion. It is priced at \$485.

North American Software, P.O. Box 440886, Denver, Colo. 80014.

## PRODUCTIVITY AIDS

### OXFORD SOFTWARE CORP. UFO, Manticle price changes

Oxford Software Corp. has announced price changes for its product line.

User Plus On-Line (UFO) is an on-line application development system for IBM CICS and IMS/DC environments. For UFO/CICS, the new prices are \$27,000 for IBM's DOS operating system and \$35,000 for IBM's OS op-

erating system.

Prices for Manticle, an electronic spreadsheet for CICS environments, are reduced to \$6,000 for DOS and \$12,500 for OS.

UFO/Cobol is an on-line CICS application development system that uses standard Asol Cobol as its development language. The DOS price is \$24,000, and the OS price is \$33,000. Until April, introductory prices are \$18,000 and \$24,750.

Oxford Software, 174 Boulevard, Hasbrouck Heights, N.J. 07840.

## APPLICATION PACKAGES

### DATA DESIGN ASSOCIATES, INC. Accounts payable enhancement

Data Design Associates, Inc. has announced an enhancement to its accounts payable system for mainframes and large minicomputers.

According to the vendor, the system now helps companies comply with the backup withholding and reporting provisions of the Interest and Dividends Tax Compliance Act of 1968. The system recognizes when withholding should occur and automatically calculates and deducts the

proper amount from a vendor's invoice. It is written in Cobol.

An on-line version is available for IBM mainframes and large minicomputers, and a batch version is available for all major mainframes. The system sells for \$35,000 to \$53,000. Data Design Associates, 1279 Oakmead Plung., Sunnyvale, Calif. 94086.

### DISTINCTIVE SOLUTIONS CORP. Commercial Finance System CFS/3000

Distinctive Solutions Corp. has announced an interactive, modularly designed system for processing and monitoring commercial finance instruments, such as revolving loans, commercial loans and leases.

Commercial Finance System CFS/3000 is designed to operate on the Hewlett-Packard Co. HP 3000 superminicomputer and is available now. It is said to allow input through menu selections or fill-in-the-blanks forms, with an on-line Help system intended to reduce errors.

The price depends on the number and type of modules ordered, with minimum packages costing \$100,000.

Distinctive Solutions, 1205 Marsh St., San Luis Obispo, Calif. 93401.

See WOLB page 47

## Release 3.0 of DBDM out

ETA International, Inc. has announced Release 3.0 of its Data Based Development Methodology (DBDM), which is described as a systems planning and development methodology for use with Callicott Software, Inc.'s IDMS, Integrated Data Dictionary and ADS/On-Line software.

DBDM provides detailed standards, procedures, controls and deliverables necessary to implement projects in data base, data communications and data dictionary environments. It reportedly consists of modules that support the planning, analysis, design and implementation of data-based development.

The DBDM modules include business systems planning for business and MIS, business function analysis, logical data base definition, program definition for data-based systems, physical data base design and data base implementation guidelines.

DBDM is licensed for \$18,000, including the six primary modules, all supplemental modules and five days of customized on-site workshops.

ETA International, Seven Wells Ave., Newton, Mass. 02150.

## TRAIN from page 43

a programming job.

The problem of "training a programmer for someone else" is the heart of the rational opposition to using trainees. Trainees do leave, but for the same reasons as other employees. Input, Inc.'s research indicates that the primary reasons for turnover in technical positions in the information systems department are:

- Lack of opportunity to learn or to work on challenging projects.

- A nonresponsive management structure.

- Obsolescent technology.
- Nonexistent or unclear career paths.

Unfortunately, all of these problems are often the direct result of training programs. In many trainee programs, it is apparent that management doesn't really know what to do with trainees. Usually there is an initial solid block of training that goes on for weeks. This is far too much to be absorbed at one stretch, especially when much of it is not (and cannot be) put to immediate use. Often, formal education is very hard to come by after the initial period — even when it is desperately needed.

After the block of formal education, trainees are often placed in the most difficult (and usually least rewarding) job in the information systems department: maintenance. They are often assigned to a job and/or supervisor that knowledgeable employees successfully avoid.

The consequence of this classroom-maintenance sequence is that after a year, the trainees:

- Does not have a very broad perspective of data processing.

- Has picked up knowledge that is usually obsolete and often wrong.

- Has done, at best, a mediocre job (the brighter trainees will be aware of this).

With an experience that ranges from unsatisfying to disagreeable, is it any wonder that trainees would look to other organizations for employment?

Why are so many training programs like this? Our research indicates that this is because so many trainees are hired in an unplanned fashion.

Let's take a look at hiring patterns before the recent economic crunch. Looking at a broad sample of corporations, over 40% of hirings were for new positions created by growth. However, companies generally wanted to fill 80% of their openings with experienced people. This is mathematically impossible. Consequently, actual trainee hirings track the numbers of new positions very closely.

This is a game of musical

chairs; instead of chairs being subtracted, they are added. New recruits are hurriedly found, but not planned for and not really wanted.

Information systems departments should face mathematical reality and plan to hire trainees regularly. This will be much easier to do if information systems management believes that trainees have the potential for becoming superior employees. Effective training programs

are needed to make this potential a reality.

The new system environment will require, besides technical skills, aptitude in systems analysis and interpersonal relations, and a knowledge of underlying business issues. This suggests that future trainees will have more diverse backgrounds than trainees now usually have.

Whatever the eventual structure of data processing,

it will continue to need skilled people. Effective training will have at least as large a potential payoff in the future as it does now.

A successful training program will have these components:

- Both the organization and the trainee feel that the trainee is making a tangible contribution to the organization very early in the trainee's career.

- The trainee receives

textbook knowledge in the amounts required, and at an appropriate time.

- Trainees have a positive view toward their job and the organization from the start.

- Trainees stay with the organization.

from page 45

CYBORG SYSTEMS, INC.  
Payroll, Human Resources  
Management

Cyborg Systems, Inc. has announced that its Payroll and Human Resources Management packages are now available for use in the IBM iMS DB/DC environment.

According to a company spokesman, standard iMS utilities may be used for

## backup and recovery.

One feature is said to be the ability to create new on-line screens within the Cyborg program, bypassing the Message Format Services of iMS for immediate use without recommitting programs.

The iMS feature is priced at \$50,000.

The base price for the Payroll package is \$45,000, while the Human Resources Management package is \$36,000.

Cyborg Systems, 3 N. Riverside Plaza, Chicago, Ill. 60606.

DATA BASE  
MANAGEMENT  
SERVICESJCA SOFTWARE, INC.  
Sort-On-Line

JCA Software, Inc. has announced a software system

said to provide an on-line sorting capability in the Collins Software, Inc. iMS/DC data base management system environment.

Sort-On-Line (SOL) reportedly improves the ability of iMS users to obtain information from the data base in sequences that are different from the way in which the data was originally stored.

The on-line sorting capability also works for Scratch,

Quasar and Table records, the vendor said.

SOL enables the end user to specify dynamically the sort sequences desired at the moment without need for program definition by a programmer, according to the vendor.

The product is fully compatible with Cobol, PL/I and Collins's Application Development System/On-Line programs, the vendor said.

A license fee for SOL costs \$10,000.

JCA Software, Suite 254, 2185 Dupont Drive, Irvine, Calif. 92715.

## LANGUAGES

WHITESMITHS LTD.  
C/370

Whitesmiths Ltd. has announced C/370, said to be a C language compiler for the IBM 370 mainframe architecture.

A vendor spokesman said C/370 permits C program development in the IBM mainframe environment and allows Digital Equipment Corp. VAX-11 users to move existing C and Unix applications to the IBM 370 architecture through recompiling and re-linking.

The standard C/370 package includes Whitesmith's Pascal-to-C translator, which reportedly gives users the ability to run Pascal programs in the 370 environment as well.

The spokesman said C/370 is a full implementation of the standard C language. It runs on all IBM 370, 4800 and 30 series and plug-compatible mainframe systems. It also operates with IBM's VM/CMS, through OS/360 and MVS/TSO, the vendor said.

C/370 is priced at \$4,000 until March 30 and \$5,000 after that date, according to the vendor.

Whitesmiths, 37 Lonsell Road, Concord, Mass. 01742.

## Tektronix.

No graphics terminals connect you to better utility or applications software, or with a broader range of computers, than Tek's desktop 4100 Series terminals.

Among the dividends of Tek's long leadership in graphics are the scores of program development tools and powerful applications packages already on file and immediately compatible with most computers.

From analysis to reporting, cartography to CAD: compatible

software helped make Tek's low-cost 4100 Series an immediate success.

Major software vendors like IBM, SAS, Precision Visuals and many others offer 4100 users flexibility in data analysis and presentation.

In more technical, engineering and scientific environments, users can take advantage of ANSYS™, PATRAN-G™, ANVL-4000™, GEOMOD™, Tek PLOT 10 Computer-Aided Drafting and Easy Graphing II.

Tek PLOT 10 graphics development software library is installed on more computers than any other in the world. It now includes the core standard IGL, the new international standard GKS and TCS, nucleus for scores of specialized packages.

The 4100 Series lets you take full advantage of all these powerful software resources.

Fast, flexible, and priced fully equipped from just \$3895, quantity one, the 4100 Series

includes VT100 compatibility and ANSI X3.64 text editing right along with its exceptional graphics. Choose from a range of resolution, segment

It's a very quiet and reliable push-button easy desktop unit that doubles as an alphanumeric printer. Single quantity cost is just \$1595

**DBMS** from page 43

provided an IBM SQL, look-alike query language that takes dead aim at IBM's decision to use SQL as a front-end language to DB2. Furthermore, Teradata claims to use a "true" relational DBMS combined with a processing architecture "built to support the relational model," according to Michael Ehrenberger, Teradata's eastern regional manager.

Teradata doesn't expect its data base approach to replace IMS or any other product DBMS soon. "Companies have a lot of money invested in their IMS data base, and we'd be foolish to expect they're going to give it up for our model," Ehrenberger said. But the company expects that growing information center requirements and the corresponding demand for relational processing will push companies to seek a more efficient way to process data for end users. In fact, part of the company's documentation offers guidelines for which applications are best offered on DBC/1012 and which are best left to IMS.

DBC/1012 uses Intel 8086 microprocessors, called Access Module Processors (AMP) running in parallel and controlled by Teradata's Yast network processor, which consists of an array of active logic. Each processor has a dedicated 475M-byte Winchester disk drive with the data distributed evenly among the drives.

Requests are translated and distributed by an interface processor and sent to the AMPs, which access the

data in parallel. Responses are transmitted over Yast and coordinated and translated by the interface processor for return to the mainframe over a block multiplexer pipeline. Each processor can perform 30 access/sec, making a total access rate of over 30,000 access/sec achievable in the largest configuration.

Teradata has also challenged the IBM price umbrella. Storage can be added at

the rate of \$37 per megabyte, and horsepower can be increased at a cost of \$60,000 per Mips.

In designing DBC/1012, Teradata employed the advice of 18 Fortune 500 companies over a 24-year period to design the system in an agreement it calls the Partner Program. The companies provided input at each step of the design process in exchange for a discount on DBC/1012. Teradata claims

to have letters of intent to purchase from nearly every member of the Partner Program.

The company faces an uphill struggle, however. The DP community is clearly skeptical of data base machines in light of their poor market performance to date. Teradata must also face up to the formidable disadvantage of not being IBM. Few companies will be eager to sink one million dollars or more in a

complex system from a company that may not be around to support it in the future. It's easier to license IBM for \$80,000 a year and get the peace of mind of knowing it will always be supported.

Teradata expects to be profitable by the end of the year, and it will be worth watching to see if it achieves its objectives. If so, the company may open a door which many in the industry thought was fast closing.

**ON-LINE  
DATA BASES**

**DOW JONES & CO., INC.**  
Dow Jones News/Retrieval  
via Net 1980

Dow Jones & Co., Inc. has announced that its Dow Jones News/Retrieval business and financial information service is available through AT&T Information Systems, Inc.'s Net 1000 shared network service.

The Dow Jones News/Retrieval service provides users with business and economic news, securities quotes, financial and investment services and general news through its 27 data bases.

The service is offered through two pricing plans, both of which include a \$75 sign-up fee. The standard pricing plan prices vary between 60 cents and \$1.20 per connect minute. The executive pricing plan prices, which include a \$50 monthly fee per user site, range between 40 cents and 80 cents per connect minute.

Dow Jones & Co., P.O. Box 300, Princeton, N.J. 08540.

The new IBM Modem.  
It stacks up as never before.

## SOFTWARE &amp; SERVICES

**TURING** (on page 43)  
 ment in Cobol to switch is another matter entirely."

Holt said that inadequacies in PL/I and Pascal provided the impetus for the development of Turing. "We wanted to be able to use and teach the state of the art in software, which essentially left us the choice of PL/I and Pascal. PL/I had a lot of the power and Pascal had a lot of the elegance we wanted, but

these systems don't incorporate many of the things that have been learned in the last decade."

Perhaps the most important advances these languages fail to utilize, he said, are modular programming techniques that allow a programmer to isolate one or more segments — or modules — of a code from the rest of the program.

The modules accommodate a building-block approach to

system design and maintenance, an approach that ensures accuracy and flexibility, Holt said.

"We wanted a language that was easier to use than Basic, and I think we accomplished that," Holt said. "It has a very simple, clean syntax. You write down what you want done, and the language does it. That's different from Pascal or PL/I. (Turing) reads much like a simplified version of Pascal,

yet it's more powerful, and it leaves behind the syntactic frills of Pascal. You have procedures that appear similar to Pascal procedures, but they are shorter and simpler."

Holt said the structured Turing language incorporates sophisticated debugging techniques, such as consistency checking, that ensure program accuracy.

"There are many things that other languages allow that

simply don't make sense. But Turing has built in, from an engineering standpoint, many features that minimize the number of errors that show up in your production program," he said.

to "aching bugs"

"The result is that when you first get your program running, it's correct. You don't have a whole series of lurking bugs that show up days, weeks or even months later," Holt added.

Turing has been well received by Holt's peers in the academic community, but the development group now faces the task of building a commercial user base. "We are hoping that people will see that this language is on the leading edge in software design."

"Most people who have seen it come away saying that it is. Turing is clearly better, but whether people with a large investment in other languages will convert is the real question. I believe that's a real possibility."

The new rack-mounted IBM 3868 Modem saves you space. And money. And effort.

Space, because IBM's new one-inch-wide vertical package allows you to mount up to 12 modems in one enclosure that fits a standard 19-inch rack.

Money, because each enclosure needs only one power supply and cooling system to support all of its modems.

And you manage your network with less effort because the IBM 3868 Modem has the same high availability and rock-steady reliability as other modems in the 386X Series—plus an enhanced Link Problem Determination Aid (LPDA).

Working with software available for many IBM host systems, the LPDA performs greater end-to-end management. Now line conditions are identified further downstream from the host, and in more detail. For example, conditions in any multi-point circuit can be pinpointed to a particular leg, including tailed configurations off multi-plexed links.

In fact, to help you keep your network humming, the LPDA and host software monitor and provide you with a line quality value, a receive signal level, an error-to-traffic ratio and modem self-test results to help you isolate line problems. Now you can more precisely communicate them to your communications carrier.

*And because the 3868 Modem is so reliable, it's backed by a full three-year warranty.*

Try them for up to four weeks: just select 2400, 4800 or 9600 bps line speeds. If you purchase in quantity, discounts are available.

To get your copy of a free brochure, or to arrange to have an IBM representative contact you, call toll-free, 1 800 IBM-2468; ext. 90. Call your IBM representative or return the coupon.

## Nacha offers paperless trade system

By Patricia Hecks  
CW Staff

WASHINGTON, D.C. — A system that electronically replaces the paper checks used in processing debits and credits between participating companies and their trading partners has been unveiled by the National Automated Clearing House Association (Nacha).

Corporate trade payments (CTP) are transmitted via any of 30 automated clearinghouse (ACH) networks, which provide a telecommunications link between banks, savings and loan associations and credit unions. The network reportedly replaces a total of 400 million checks annually.

Most of the regional automated clearinghouses utilize the clearing facilities, delivery methods and settlement services operated by the Federal Reserve System, although some utilize private processing facilities as well. Each clearinghouse is responsible for forming membership policies, pricing structures and the operating policies within its own region. Nacha establishes and maintains rules governing the exchange of automated clearinghouse payments between clearinghouse regions, as well as providing standards and technical support facilitating the same.

Nacha conducted a study in 1981 to determine whether development of electronic CTPs was warranted, and whether it was feasible to send those payments through the ACH. Study results included:

- Each of the corporations indicated interest in sending trade payments through the automated clearinghouse regardless of their level of automation.

- Forty-four percent of the corporations were involved in a net settlement system within their industry.

- The number of financial institutions with which they had accounts ranged from one to 90 on the accounts receivable side, with an average of 22 banks, and one to 50 on the payment disbursement side, with an average of 17. All of the corporations indicated the majority of their trad-

## Confusion follows divestiture

Companies report service problems

By John Ditz  
CW Staff

"Genuine, legitimate and honest confusion" is how one communications manager contacted in a recent informal telephone survey summed up operating conditions in the environment created by the AT&T divestiture.

Each company queried related some dissatisfaction with the quality of service they have been receiving from the regional telephone holding companies and AT&T since they were separated on Jan. 1. The degree of dissatisfaction ranged from simple annoyance at having to work with new contacts within the carrier organizations to disgust with the inability of those companies to complete even modest requests.

J. P. Sheedy, manager of network services for International Harvester Co. in Chicago, said there has been a noticeable lag in service and in getting things repaired, but that the company has been able to operate on a relatively even keel. Sheedy credits Harvester's stability to the fact that the company isn't in the midst of any major communications projects and that it uses communications equipment from many vendors.

There have been some problems, however. In the worst case, a disconnect order was issued for four Wats lines at a Harvester facility in Memphis, Tenn. "The order got bungled between AT&T and [Southwestern Bell Corp.]," Sheedy said, "and instead of taking down four lines, all 15 Wats lines at that location were disconnected." Service on all but two of the lines was restored within six hours, and the others were repaired the next day.

Sheedy said that in most other instances Harvester has had little problem getting business and Wats lines in-

stalled, but has experienced trouble in getting lines repaired. "There are more steps to go through now," Sheedy said, and "when you call a [regional] holding company with a problem, you often get shuffled around, and sometimes they have trouble finding your records."

The one major equipment delay that Harvester has experienced was in Fort Wayne, Ind. Sheedy said that AT&T Information Systems, Inc. reported that it will not be able to meet a delivery schedule for a Dimension System 85 that was to replace a Century customer premise site, supported by non-AT&T General Telephone, the local telephone company. Sheedy is certain the delay stemmed from divestiture or if AT&T is behind schedule in the construction of this new digital pri-

vate branch exchange.

At Bank of America in San Francisco, Lloyd Isaacs, vice-president of international information technologies, reported that he has experienced increased lead times for line facilities and equipment. But that has not come as a surprise.

In preparation for the divestiture, Bank of America forecast that quality of service would drop and tried to establish two-, three- and four-year tactical plans around that fact.

In day-to-day operation, Isaacs said, "the placing and processing of orders has become confusing and time-consuming." He believes that one of the primary tasks at hand is to try to establish a working relationship with the splintered pieces of the Bell system. As he pointed out, there are regulated and nonregulated subsidiaries of the regional holding companies to deal with, as well as the similar delineation at AT&T between AT&T Information Systems

COMMUNICATIONS  
CONTROLLERS

**PROTOCOL COMPUTERS, INC.**  
CPT 8276 SNA controller Wordplex converter

Protocol Computers, Inc. has announced two products that provide IBM compatibility — the CPT 8276 SNA controller and the Wordplex converter.

The CPT 8276 SNA controller enables CPT Corp.'s word and data processing systems to communicate with IBM host computers. The product allows seven devices to be linked to an IBM network utilizing IBM's System Network Architecture (SNA). The workstations can be linked directly to the IBM network or can utilize dial-in capabilities, such as the ability to store data locally or to word process documents with the CPT terminal and then transfer the data to the IBM host for electronic mail or other processing purposes, the vendor said. The price is \$7,000.

The Wordplex converter enables Wordplex Corp.'s workstations to communicate with IBM host computers. The workstations can be linked directly to an IBM network or can utilize dial-in capabilities for low-volume applications, the vendor said.

The converter is available in 1-, 3-, 5- and 7-port configurations. Prices are \$2,900, \$3,900, \$4,900 and \$5,600, respectively.

Protocol Computers, 6150 Carnegie Ave., Woodland Hills, Calif. 91367.

MCI service  
transmits mail  
to telex users

WASHINGTON, D.C. — MCI Communications Corp. recently announced MCI Mail Telex Dispatch, a service to transmit electronic mail to telex customers and vice versa.

The service reportedly allows MCI Mail subscribers to transmit messages to telex subscribers worldwide and for telex subscribers to send messages to MCI Mail customers.

MCI Mail customers can send dispatches electronically to telex terminals with charges based on an MCI "mini-ounce," which equals 400 characters, MCI said. Rates vary according to the country of destination. Rates are available on-line to MCI customers.

There is no charge to MCI Mail subscribers for receiving telex messages, according to MCI, 1133 19th St. N.W., Washington, D.C. 20036.

VOICE/DATA  
COMMUNICATIONS

**TIMEPLEX, INC.**  
Voice option for Link/1

Timeplex, Inc. has announced a voice digitizing option for the company's Link/1, the T-1 facilities management system.

The option enables up to 48 analog voice channels operating at 55K bit/sec to be digitized and multiplexed over a T-1 line operating at 1.544M bit/sec.

The option is offered in multiples of four voice channels, the vendor said.

Voice modules may be mixed in any proportion with the four-port synchronous data card with the

Link/1, according to a company spokesman.

The voice option is priced at \$3,550.

Timeplex, 500 Chestnut Ridge Road, Woodcliff Lake, N.J. 07075.

## AUXILIARY EQUIPMENT

**INTERNATIONAL RECORD CARRIER, INC.**  
Supervision

International Record Carrier, Inc. (IRC) has introduced Supervision, an international telex service available to North American customers.

IRC transmits worldwide via its London-based computer center. Customers link up to this facility

through standard microcomputers or electronic typewriters and telephone lines, according to a spokesman for the vendor. The service reportedly allows shorter transmission time and guarantees 5-min. delivery. It also permits customers to edit, update and transmit messages, the vendor said.

According to the vendor, the service is compatible with microcomputers from 28 different manufacturers. Customers receive free-of-charge preprogrammed Superlex software on floppy disk format.

There is no monthly charge for Superlex service, according to a company spokesman. International rates vary and are obtainable from the vendor.

IRC, 811 E. 43rd St., New York, N.Y. 10017.

# The Data Center is under your command. But is it under your control?

Value Computing's systems management software automates the critical tasks of production forecasting and scheduling, capacity planning, and resource allocation and accounting, and brings those tasks under centralized control.

Your control.

The effects on data center operations are immediate: a more stable production environment... faster turnaround... fewer unusual procedures... shorter night processing times... fewer mistakes, minimizing downtime... less management dependency on operations personnel.

In short, a smoother running, better performing data center; a center where managers get the most intensive use of all resources. Without making a

major capital investment in additional CPUs or peripherals.

We don't believe there's a more cost-effective way to improve the performance of your data center or the value of its position in your company. Call us and find out why more than 1500 users agree.

**Value Computing Software Systems**  
DCMS—The most powerful and comprehensive production scheduling and system available.

Charge—The industry standard in production and computer billing.

**VALU-LIB**—An entirely new tape management system designed for today's VS environments.

**SMF Express**—A unique package for the management of important SMF data.

## COMMUNICATIONS

## X.25 reference describes specs

BROOKLYN, N.Y. — AT&T Communications has announced an updated technical reference describing X.25 packet-switching network interface specifications for data systems users and manufacturers.

"X.25 Interface Specifications and Packet-Switching Capabilities" replaces a 1981 issue and describes X.25 features currently supported by AT&T and those considered for support in 1984 and 1988. It costs \$37, plus \$1 for shipping, and is published by Literary Data Center, Inc.

Literary Data Center, GPO Box C-8104, Brooklyn, N.Y. 11208.

## NACHA

See page 50

ing partners did have electronic funds transfer capabilities.

If Data standards were a concern among most of the corporations, Data specifications had a silver for invoices and payment information to flow through the automated clearinghouse.

Also, benefits cited for using corporate trade payments included better cash management controls, improved business relationships due to knowledge of exact day credits or debits, reduction of paper and paper-related costs, more efficient use of personnel, better investment planning, and improved speed of business activity.

The technology developed for corporate trade payments is similar to,

although more complex than, the system instituted several years ago to handle the automatic deposit of payroll, pension and social security payments for consumers, Nacha said. Corporate trade payment rules and regulations differ substantially from that of automated clearinghouse consumer payments. For example, corporate trade payments allow payment of multiple invoices with a single transaction. Also, the system was designed with safeguards, such as maximum dollar limitations that must be specified on individual debit orders.

One of the issues that had to be resolved in the development of a viable trade payment system was that of "float" — the interest earned on funds during the time period from which a check is issued until it is actually debited to the account. How-

ever, one method some corporations use to eliminate float impact, according to Nacha, is through renegotiation payment terms with major trading partners. These new terms might offer higher discounts or extended payment due dates in exchange for electronic payment in immediately usable funds.

With the successful completion of the test phase, Nacha claims it can now offer corporate trade payments to companies of all sizes.

A recent announcement by the U.S. Treasury Department indicating that it will begin making corporate trade payments with some of its leading partners in 1984 is expected to boost the volume of trade payments.

More information is available from Nacha, located at 1120 Connecticut Ave. N.W., Washington, D.C. 20036.

## DIVEST

See page 50

and AT&T Communications.

"We're going to be faced with 12 to 15 more months of this cloud before these things get sorted out," Isaac said. In the interim, "decisions are going to have to be made under a greater degree of uncertainty."

This is forcing Bank of America to assume greater responsibility in the management of its communications facilities. As an example, Isaac said that before divestiture, it had an order with AT&T for a large Electrical Taps Network. Now Pacific Bell Telephone Co. will own the switches, and AT&T will provide the interstate lines. "Whereas we had made the decision to go with a single provider of a network, now the responsibility falls in more than one camp. We have to take on the role of coordinator."

The only equipment delays Bank of America has experienced have resulted from order foul-ups. In one notable instance, Isaac said that an order was noted as complete when it was not, and it had to be reinitiated.

At Colgate-Palmolive Co. in New York City, Manfred Zerbe, director of communications services, said that it will be hard to disappoint his company because it has been anticipating the worst from divestiture.

Colgate's experience in the divested environment has been limited because the company didn't have a backlog of equipment and services. For the few equipment problems the company has experienced, the AT&T Information Systems Customer Service Support Operation provided a single point of contact, relieving Colgate of the responsibility of determining whether the problem was with AT&T Information Systems, AT&T Communications or New York Telephone Co., the communications director reported.

One point of irritation for the company came from the back-ordering of some electronic key systems that AT&T Information Systems said it would deliver in mid-January. More irksome than the actual delay was the fact that this information had to be pried out of the company.

A communications manager at a large Massachusetts company who asked to remain anonymous said that the service his company is receiving is horrendous.

The root of the problem lies in lousy coordination between AT&T and New England Telephone Co., the contact said. "I'm just glad we're not planning any network expansion," he added.

## GET EVERYBODY ON BOARD.

Now there's a way to let everyone in your company chip in.

AT&T Information Systems, the company whose unparalleled communications heritage has been bringing people together for 100 years, now brings your office together. With

state-of-the-art office automation that's designed to get your company moving ahead.

Electronic Document Communications, now available on System 85 and DIMENSION PRX, is an easy-to-learn software application that's hard to beat. Because it integrates your office by letting everyone prepare, send and store documents and messages with the speed and efficiency of a computer. So you can have better access to the right information in the right form at the right time.

Electronic Document Communications can streamline your office in three ways:

**Preparing Information**—Reduces the time, effort, cost and wasted paper between drafts by electronically creating, editing and

formatting documents and messages. "The Composer," a special software feature, checks spelling, grammar, punctuation and usage. EDC even measures whether documents are readable by technical and nontechnical readers.

**Moving Information**—Speeds documents to many people in different locations simultaneously so they can act decisively. EDC allows you to determine the timing and cost of delivery, and even check to find out when documents were received. Using a password ensures the privacy of your messages.

**Managing and Storing Information**—Locates documents, and retrieves and evalu-

ates contents quickly and easily with electronic files—while reducing the possibility of losing documents. An electronic "Mailbox" allows you to quickly determine which documents to read first. EDC reduces storing and filing costs with an electronic "Archives" that allows for either short- or long-term storage, and the "Wastebasket" which enables you to permanently delete items after a determined period of time. There's even an electronic "Calendar" that checks personal schedules and arranges mutually convenient meetings.

Not only will all these features help you further integrate your office, Electronic Document Communications is itself just one

part of AT&T's line of completely integrated business systems. For state-of-the-art office automation, you can implement EDC in conjunction with other applications software like Message Center/Directory, a call coverage and message system. These office management applications are now available on System 85 and DIMENSION® 800 and 2000 systems with the Applications Processor.

The result is you'll be able to improve staff productivity at every level and get everybody on board. And as new features are developed in the future, they'll be compatible with your existing equipment.

EDC was developed by Bell Labs systems designers who now work for AT&T Information

Systems Laboratories. AT&T Western Electric produces EDC, and AT&T Information Systems will maintain it with comprehensive, conscientious service from the largest service organization in the industry. To find out more, call toll-free 1-800-247-1212, Ext. 879M.

AT&T's Electronic Document Communications: It's part of the integrated office of tomorrow that you can board today.

***"IDMS/R represents a major advance in database technology."***

**Dave Litwack\***

*\*David Litvack is Outlook's Vice President of Product Development. Mr. Litvack has contributed significantly to the many technical advances Outlook has achieved in database software products, including IDMSR. Mr. Litvack joined Outlook in 1976. He is a Cum Laude graduate of Brandon University and holds a Masters in Computer Science from Boston University.*

**Because IDMS/R is the first  
relational DBMS designed  
for both the DP professional  
and the end user.**

IDMS/R is not only a relational database management system, but a particularly powerful one. IDMS was made relational by removing all pointers and allowing the user to define data as tables and providing the traditional relational operators such as selects, projects and joins. The major benefit of a relational DBMS is the capacity to develop applications faster because the developer does not have to be concerned with the database design. IDMS/R provides this and much more.

For example, the Automatic System Facility (ASF) of IDMS/R is a major advance over fourth generation languages. The ASF is so comprehensive and easy to use that all a user need do, to develop an application, is define a relational record. The Automatic System Facility dynamically generates all necessary supporting structures including data definitions, screen formats, application processing logic, and documentation.

So, the developer can witness the application being produced, literally, in seconds. This capability makes IDMS/R the perfect system for the end user.

Data processing professionals can use the ASF to help develop production applications. The ASF can be used to build a prototype that can be enhanced, using Cullinet's fourth generation language, ADS/OnLine, into a complex production application. But, when they build a complex high volume application using IDMS/R, DP professionals require outstanding performance. Typically, 5% of the data relationships (joins) in any application are accessed 95% of the time. With IDMS/R, they can simply change those relationships to reconfigured

In addition, IDMS/R has the most sophisticated back-up and recovery capability of any DBMS, full integration with personal computers and is also integrated with Cullinet's complete line of financial and manufacturing applications.

In summary, IDMS/R was designed to satisfy the requirements of those who want to develop applications faster and those who have the responsibility of processing them.

For further information, attend a Cullinet Seminar. Mail the attached coupon or call Cullinet at 1-800-225-0930 (in Massachusetts, 617-329-7700).

## What's plaguing big CPU makers

### MAIN VAX

TOM HENSEL  
Senior Editor

The big five mainframe makers all have the same problem. As 3,000 line/min. GDS, the VAX can print optical recognition characters, according to IBM.

The printer uses about 40% less power and produces about 20% less heat than the earlier IBM 4341, a 3,000 line/min. impact printer. In addition, the 4346 can run all 3211 programs, the IBM spokesman said.

Through program control, an operator can change speeds, select between six or eight vertical line space/in. or adjust hammer-flight timing.

The unit is equipped with microprocessor-controlled self-diagnostics and uses a 15-char. display for diagnostic and test messages, IBM said.

The 4346 can be optionally expanded

## IBM unveils impact line printer Can operate at 3,600 line/min

RYE BROOK, N.Y. — IBM has unveiled what it claims to be its fastest impact line printer, the 4346.

The unit can operate at 3,600, 3,000 or 1,500 line/min. GDS, the VAX can print optical recognition characters, according to IBM.

The printer uses about 40% less power and produces about 20% less heat than the earlier IBM 4341, a 3,000 line/min. impact printer. In addition, the 4346 can run all 3211 programs, the IBM spokesman said.

Through program control, an operator can change speeds, select between six or eight vertical line space/in. or adjust hammer-flight timing.

The unit is equipped with microprocessor-controlled self-diagnostics and uses a 15-char. display for diagnostic and test messages, IBM said.

The 4346 can be optionally expanded

from 182 to 168 print positions. This option allows side-by-side printing of two 8 1/2-in.-wide sheets of paper, a spokesperson said.

A basic 4346 Model 1 printer costs \$60,000 and will be available in March. Lease plans are available through the IBM Credit Corp. starting at \$1,936/month. The minimum monthly charge on the 4341 is \$975. The option to expand the maximum number of print positions from 182 to 168 costs \$10,000 when installed at the factory and \$18,000 if installed in the field. Volume discounts of up to 30% are available to users who purchase mixed orders of the 4346 and the 2,000 line/min. 4345 printer, according to an IBM spokesman.

The printer was announced by IBM's Information Systems Group at 900 King St., Rye Brook, N.Y. 10573.

## Apollo DN320 workstation bows

CHELMSFORD, Mass. — Apollo Computer, Inc. has introduced a 32-bit, floating-point workstation said to offer three times the floating-point performance of the firm's DN300.

The floating-point computational performance of the DN320 is equivalent to larger systems, such as Digital Equipment Corp.'s VAX-11/730 or VAX-11/750-class machines, for one-third to one-half the price, the vendor claimed.

In addition, the firm reportedly has more than doubled the storage capacity available for the DN320 and 330 workstations with a 70M-byte Winchester disk drive and two 8-in. Winchester-type disk drives offering 80M and 167M bytes of storage. The drives can be used on the DN400 and DN600 processor nodes and DSP160 server processor.

The DN320 features 1.5M bytes of main memory, the firm's windowing software,

which can handle up to 35 concurrent processes; 16M bytes of virtual address space per processor; high-resolution bit-mapped graphics; and connectivity to Apollo's Domain local-area network. The unit's 17-in., monochromatic display offers a 1,024-by-800 pixel resolution, detachable keyboard and optional touch pad mouse.

The DN320 node and disk are said to allow users to mix systems of varying power.

The DN320 is priced at \$23,400. The 70M-byte disk features random-access seek time of 46 msec. A 1.2M-byte floppy disk is optional for backup, software distribution or personal storage. The 70M-byte disk costs \$12,800, or \$14,300 if integrated with the floppy disk. The 80M-byte disk is priced at \$12,800; the 167M-byte disk is \$16,800.

Apollo is located at 15 Elizabeth Drive, Chelmsford, Mass. 01824.

## Tandem 653X line gets 3270 emulation, voice recognition

By Jeffrey Bosler  
CW West Coast Bureau

CUPERTINO, Calif. — Tandem Computers, Inc. has enhanced its 653X terminal line with IBM 3270 emulation capability, two additional terminal models and a voice-recognition feature that reportedly provides an alternative means for entering data into Tandem processors.

Tandem also introduced a 65 char./sec. letter-quality printer for the price of its Model 6530 terminal by \$276, a reduction of approximately 11%.

The 653X family had been slated to receive yet another product improvement — word processing capability — but the proposed upgrade reportedly suffered from serious shortcomings and is being withheld from the marketplace indefinitely, according to a Tandem spokesman.

Announcements of the latest enhancements to the 653X terminal line came on Feb. 10 during an annual shareholders' meeting at Tandem's world headquarters here. With the release of Tandem's EM3270 communications access method, all three members of the 653X series, including the two newcomers, can now interact selectively over bichronous lines with either IBM or Tandem host mainframes. Users can switch between IBM and Tandem processors by touching just one keyboard button, the spokesman said.

Implemented mainly in software, EM3270 enables the 653X terminals to emulate a wide assortment of 3270 series devices, including:

- The 3277 Model 3.
- 3278 Models 2, 3, 4 and 5.
- 3279 Models 2 and 3.
- Models 3284, 3286, 3287, 3288

and 3289 printers.

Because the 3270's emulation software resides in Tandem's Non-stop and TAP mainframes, none of the firm's terminals can communicate directly with IBM processors. Instead, the display units gain indirect access to IBM applications through Tandem's CPUs, the spokesman said.

EM3270 complements its developer's two existing access methods — TR3271, which allows 3270 series peripherals to treat Tandem hosts as 3271-type cluster controllers, and AM3270, which permits IBM-built 3270s to communicate bichronously with Tandem systems.

### New terminals

In addition to operating with the existing 6530, the 3270 emulation capability is available with the 6531 and 6532, the two latest extensions

to Tandem's terminal family. Unlike its older sister system, with its 16-in. monitor, the 6531 has a 12-in. display screen and is suited primarily for decision-making applications and "what-if" queries, the Tandem spokesman said.

The 6532, by contrast, comes with a 9-in. display and is aimed mainly at jobs in which desk space is at a premium.

Both 653X series additions are packaged with their electronics and monitors in separate boxes, which can be moved up to 6 ft. apart from each other, the spokesman noted.

Like the existing 6530, the 6531 and 6532 support Tandem's just-announced Voice Input Option, which uses a microphone and headset to allow users to enter data simply by talking rather than by keying. It intended mainly for production-floor

See W0808 page 88

# See COBOL.

Dick is a COBOL programmer. Dick is bored. Harried. Overworked. Dick struggles with tedious trace and

debugging routines. Non-existent documentation. Mainframe logjams.

Dick is four months behind schedule as a result. And users are angry about long turnaround times. They yell and make Dick upset. They make Dick's boss upset. Nobody is very happy.

Dick sees COBOL as a drag. He dreams of a different sort of life. Where he's a programmer hero. Entertained by his work. Admired for his skill. Rewarded for his performance. Now his dreams can come true.

# See COBOL Run.

Jane is a happy COBOL programmer. She uses ANIMATOR.™ It's a unique VISUAL PROGRAMMING™ aid for MICRO FOCUS™ LEVEL II COBOL. It runs on Jane's friendly microcomputer. It makes child's play of mainframe test and maintenance chores.

With ANIMATOR, Jane sees a picture of the program explaining itself. In live action. In COBOL source code. Right at her desk. As ANIMATOR displays the program listing, the cursor tracks the exact execution path. Including subroutine

branches. The view is precise. Compact. Unambiguous. And there's no waiting for computer time.

Jane can have the program run fast. Or slow. Or stop it. All at the touch of a key. This makes it easy to spot problems. Insert fixes. Set breakpoints. Instantly. Because of ANIMATOR's sophisticated debugging commands.

ANIMATOR gives Jane more freedom to innovate too. Her programs sometimes win awards. Yet she always meets schedules. Jane's boss likes this about Jane. Because he doesn't like users to yell at him.

# Run, COBOL, Run!

This DP manager just got a big bonus. Because he doubled productivity. He cleared the backlog. Cut costs. Compressed development cycles. Increased programmer efficiency and satisfaction. Produced terrific applications with faster turnaround times. Put

control and prestige back into the central DP function. And nobody yells at him anymore. All thanks to ANIMATOR.

## See ANIMATOR now.

Let Micro Focus put your DP shop on the fast track. ANIMATOR makes COBOL programs easy to comprehend. Fun to develop. A snap to maintain. Without the drudgery, your programmers will be happier. They'll do better work. In record time. And your users will probably stand up and cheer.

ANIMATOR runs with MICRO FOCUS Level II COBOL for compatibility with

ANSI '74 High Level COBOL implementations. A mainframe-micro communications link is recommended for downloading mainframe programs.

Write or call for a demo. Or detailed information. Right now.

## SYSTEMS &amp; PERIPHERALS

# Array processor fits VAX PE offers LP1200 printer

BELLERUSA, Mass. — CSP, Inc. has announced the availability of a multi-processor, multitasking array processor system for use with Digital Equipment Corp.'s VAX-11/780, 760 and 730 computers.

The Mini-MAP Plus 4 system consists of up to four Mini-MAP 32-bit, floating-point array processors interfaced to one VAX-11. Each array processor can be accessed by a separate user with a different task requirement. Hence, the VAX-11 processor reportedly can accommodate up to four separate computationally intensive tasks simultaneously, each with 7 million floating-point operations per second.

The basic configuration includes the four Mini-MAP array processors, each with 64K bytes of memory and DEC Unibus interface cabling. The unit is packaged in a single 104-in. chassis suitable for mounting in a DEC cabinet.

Larger configurations, including up to 16M bytes per Mini-MAP, are also available.

Also, the Mini-MAP Plus 4 system provides software development tools comprising the Scientific Subroutine Library of more than 235 algorithms. The basic configuration is priced at \$75,700.

CSP is located at 40 Linnell Circle, Bellerica, Mass. 01821.

OCEANPORT, N.J. — Perkin-Elmer Corp. has introduced a high-speed band printer for use with its line of 32-bit superminicomputers.

The LP1200 is said to offer 80 or 132 columns of solid character font printing that produces hard-copy output on standard single-page or fan-fold paper.

The unit plugs directly into any PE Series 3200 superminicomputer and reportedly offers features that reduce setup time and maximize printer operation. Other features include a horizontal forms adjustment system, switch-selectable standard vertical spacing for 6 or 8 lines/in., an automatic power switch, touch-sensitive

control panel and a typical throughput of 1,300 lines/min when using a 64-char. set.

The LP1200 is priced at \$26,900 and can be ordered with either a 64- or 80-char. set or both.

PE is located at 2 Crescent Place, Oceanport, N.J. 07767.

### SHAMP COMPUTER SERVICES, INC.

Shamprank

Shamp Computer Services, Inc. has introduced an entry-level turnkey system for distributors.

The system is based on a Texas Instruments, Inc. microprocessor and includes two TI Business Systems video display terminals featuring 384K bytes of memory, 17M bytes of disk storage, a 1.2M-byte diskette drive and a desktop printer that prints at a rate of 150 char./sec. It is expandable up to seven terminals.

The software, called Shamprank, reportedly contains order entry, inventory control, purchase order, sales analysis and sales communication with general ledger, accounts payable and accounts receivable.

Shamprank costs about \$30,000, including installation.

Shamp Computer Services, 10961 Yellow Circle Drive, Minneapolis, Minn. 55343.

## DATA STORAGE

### INNOVATIVE DATA TECHNOLOGY, INC.

Magnetic tape subsystems

Innovative Data Technology, Inc. (IDT) has introduced two 14-in., 8-track, 800 or 1,500 bpi/in. magnetic tape systems for the Moxtek, Inc. Prolog STD bus line of single-card computer systems. The subsystems meet the requirements of IBM, the American National Standards Institute, the European Computer Manufacturers Association and the International Standards Organization.

The tape subsystems reportedly utilize an intelligent microprocessor-based controller (requiring a single STD bus slot) providing an 8-bit bidirectional parallel interface. Features include asynchronous handshaking, ping-pong buffering, front-end random-access memory buffers to 256 bytes and over 40M bytes of unformatted data storage for archival and/or disk backup.

A software sample application driver is supplied with the IDT magnetic tape subsystems.

The Series TD 1060/STD, a 45 in./sec system, is priced at \$9,875; the Series TD 1760/STD, which operates at 75 in./sec, costs \$11,950.

IDT, 4060 Morena Blvd., P.O. Box 178160, San Diego, Calif. 92117.

### EMULEX CORP.

## IF YOU WANT THE BEST APPLICATIONS DEVELOPMENT TOOL, TALK TO THE PEOPLE WHO DEVELOP THE BEST APPLICATIONS.

Of all the applications development tools ever designed, only one has the proven success of our new Millennium SDT.

Because Millennium SDT was designed by McCormack & Dodge, a company with over a decade of proven success developing applications. Business applications used in over thirty countries. By the world's biggest and most demanding corporate clients.

M & D design teams have developed everything from accounts payable to payroll/personnel software. Recently, they've won industry acclaim for developing the only family of systems on the market with a genuinely borderless environment. The Millennium series.

What made the Millennium series possible was our discovery of Millennium SDT, a remarkable tool based on a remarkable truth: eighty percent of the functions in all applications are, in fact, generic. Which means that 80% are reusable.

This discovery allowed us to vastly simplify and accelerate our entire systems development process. Tasks that once took months suddenly took days. And we were able to bring a breakthrough product line to the marketplace well ahead of our competition.

If Millennium SDT revolutionized our systems development process, think of what it can do for yours. You'll make more efficient use of your data processing resources than you ever thought possible.

And just to give you an idea of how fast our applications development tool works, we've included your first application in this ad. All you do is find the dotted lines, fill in the requested information, mail the completed form, and wait for the postman to bring a packet of important information. And, if you're in a real hurry, call 1-800-343-0325.

Soon your backlog will begin to disappear. You'll be a Millennium ahead.

## SYSTEMS &amp; PERIPHERALS

Continued from page 80

**Equipment Corp. FPD-11/70 microcomputer.**

The SC72 is said to operate on the FPD-11/70 cache bus using standard system software, diagnostics and emulating in place of DEC's RST70 controller.

The SC72 reportedly integrates into a single system any four industry-compatible disk drives operating at data transfer rates up to 2M bytes/sec. According to the company, data packs are compatible and interchangeable between DEC RM08 (87M-bytes), RM05 (26M-bytes) and RP08 (174M-bytes) drives and their compatible disk drive subsystems.

The RST70 emulation reportedly allows software-transparent operation under DEC's RSTS-E, RSX11M, RSX11M-Plus and other DEC operating systems.

The SC72 is available now and is priced at \$7,985.

**Executive** 3545 Harbor Blvd., P.O. Box 6726, Costa Mesa, Calif. 92626.

## TERMINALS

## INFORTIS CORP.

**Infortis intelligent terminal**

Infortis Corp. has announced a hand-written character-recognition terminal said to incorporate the functions of dynamic character recognition, mark/sense recognition and graphics capabilities.

The Infortis intelligent data entry terminal is said to input information directly from hand-written business forms while maintaining a hard copy of the original. It features a two-line by 32-character LCD display, error messages and a programmable calculator function and accommodates three-part forms.

Operating independently of a host computer, it is based on the Zilog, Inc. Z80A microprocessor and contains 64K bytes of random-access memory (RAM), 64K bytes of read-only memory and 48K bytes of battery-backed CMOS RAM. Infortis costs \$2,000 in single-unit quantities.

**Infortis**, Suite 201, 1670 S. Amphlett Blvd., San Mateo, Calif. 94402.

## DATA GENERAL CORP.

**Dasher D230**

Data General Corp. has introduced an addition to its Dasher workstation line, said to be a color, alphanumeric video workstation for data and word processing operations.

The Dasher D230 is compatible with earlier Dasher models and offers programmable color features. It has a palette of eight colors and allows the user to select up to 64 foreground and back-

ground color combinations as a character-by-character basis, the vendor said.

The video workstation is supported by a number of operating systems and two operation modes: DG proprietary (7- and 8-bit modes) and Ascii compliant (X.3A, X.34 and X.34.4 modes). All modes are switch- and software-selectable.

The Dasher D230 is available in two packages: a monitor, keyboard and cables con-

figuration for \$2,310; or a monitor only for \$1,805.

**Data General**, 4400 Computer Drive, Marlboro, Mass. 01581.

## MED SYSTEMS, INC.

**PSC-1**

MED Systems, Inc. has announced PSC-1, a retail point-of-sale terminal that uses a Zilog, Inc. Z80 microprocessor.

PSC-1 can function as a

stand-alone unit or can be tied into a network, according to the vendor. The PSC-1 features a security program, density studies by the hour and department, inventory piling, product analysis and calculations of profit per square foot, the vendor said.

The unit sells for \$3,995. Suggested options include a dual disk drive for \$2,500 and a report generator which costs \$695.

**MED Systems**, Suite 204,

10081 Monroe Drive, Dallas, Texas 75229.

## PRINTERS/PLOTTERS

## VERSATEC, INC.

**Data-based plotting systems**

Versatec, Inc. unveiled optional 400k- to 1,600k-bytes, 514-k- Winchester disk drives for its random-  
access

Whether you're looking for Payroll, Personnel, Pension Administration or Claims Processing software, Information Science's "Whole Person" software gives you a comprehensive system that provides superior technical features.

## Systems for both Database and Non-Database

InSci's state-of-the-art payroll/personnel database system is integrated into a number of database management environments including IMS, DL-1, and IMS. Native mode, the system is designed to take full advantage of each specific database structure, eliminating clumsy, resource-draining interface programs.

In addition, InSci offers two non-database systems. One using a sequential file structure, the other using a VSAM access method.

## "WHOLE PERSON" SOFTWARE

## SYSTEM THAT MEETS ALL

## PROFES

## Introducing On-line PAS

PAS-InSci's new Pension Administration System—is available as a complement to our payroll/personnel package or as an independent, stand-alone system. PAS automates most aspects of pension administration from ERISA reporting and compliance to benefits calculation, retirement counseling, vesting schedules and benefits statements.

## Software for Health Insurance Claims

Our health insurance claims processing system permits your organization to self-administer group health, dental, and disability claims—providing significant cost savings while eliminating the need to keep duplicate information for insurance purposes.

## The Complete Human Resource Package

We call it "Whole Person" software because it is the most comprehensive, technically advanced set of human resource systems avail-

## SYSTEMS &amp; PERIPHERALS

ment processor and IBM-compatible on-line plotting controller. The disk option is added to enable Versatile on-line electrostatic plotting systems to handle larger, more complex plots in color or black-and-white with less CPU overhead.

The disk drive is available as an option with new systems or as an upgrade in existing installations. Acting as a raster data buffer, the disk drives speed the raster image

for a high-speed transfer to the plotter. On-line electrostatic color plotting requires the disk option and the firm's Versaplot color random software, which provides for eight line colors and 256 predefined area colors. Also supported is black-and-white plotting.

The disk option adds \$13,500 to the price of a random-element processor or IBM plotting controller; add \$1,500 for in-field upgrades

to existing systems.

Versatile, 2710 Walsh Ave., Santa Clara, Calif. 95051.

## GRAPHICS SYSTEMS

## AUTOGRAPHIX, INC.

Autographix 200

Autographix, Inc. has announced an on-site workstation and automated business

software package developed to design and produce high-quality presentation graphics for business.

Autographix 200 is said to produce high-resolution 36mm slides, color overhead transparencies, 8- by 10-in. color prints, black-and-white or color hard copy and video, electronic boardroom visuals.

The system is based on IBM's Personal Computer XT microcomputer and can func-

tion as an independent graphics system or as the module of a graphics network for IBM Personal Computers and Apple Computer, Inc. microcomputers, according to Autographix.

Standard features reportedly include: Autographix Guidelines and Polycurve software, a graphics display processor, a graphics tablet and interface for creative work, Spot, Rapid America, Inc. printers and a Hayes Microcomputer Products, Inc. Smartmodem.

An option is the Matrix Instruments, Inc. GCR film recorder, which produces 2,000 to 4,000 pixel/line slides on-site.

Normal slide needs and slide overruns can be transmitted over telephone lines to Autographix production centers for delivery of finished slides in five to 24 hours, according to the company.

The system is available now. The basic system is priced at \$36,500. The optional camera is priced at \$23,000.

Autographix, Oldcopy Plaza, W. Bryn Mawr Ave., Chicago, Ill. 60631.

CATRONIX CORP.  
Petrol

Catronix Corp. has introduced a stand-alone, turnkey engineering workstation for mechanical design.

According to the vendor, the Petrol desktop system is the first mechanical design workstation for computer-aided engineering that is not a superminicomputer or a remote terminal to a mainframe computer.

The workstation is built around the IBM System 6900, a laboratory-oriented microcomputer based on the Microvix, Inc. 68000 microprocessor, and three of the vendor's software programs: Catasolid, a three-dimensional solids-modeling system; Catfun, a finite-element modeler; and Catiface, an interface to finite-element analysis programs, the vendor said.

The price is \$28,500 for a system comprised of a System 6900 with 1M bytes of memory, 30M-byte Winchester disk, 8-in. floppy disk, IBM graphics screen, 16-color raster display and Catasolid and Catfun software, a vendor spokesman said.

Catronix, 180 Ralph McGill Blvd. N.E., Atlanta, Ga. 30308.

RASTER TECHNOLOGIES, INC.  
Model One/50; Model One/10

Two enhancements to the Model One line of graphics systems were announced by Raster Technologies, Inc.

The Model One/50 graphics system features a 1,200-by 1,024-pixel resolution, a 60Hz refresh rate and a pixel

## SYSTEMS &amp; PERIPHERALS

Continued from page 63

update rate of up to 8.7 msec per pixel.

The Model One/10 offers a 640- by 480-pixel resolution and a 60Hz refresh rate. Both products use the firm's proprietary very large-scale integration (VLSI) microprocessors, a spokesman said.

The Model One/90 combines a 16-bit microprocessor, a bit-slice processor and proprietary VLSI accelerators. It draws more than 70,000 one-centimeter random vectors per second, and a double-buffering feature provides vector drawing rates up to 115M pixels/sec.

The unit was designed to operate with 33-bit workstations and processors. The unit costs \$18,960 for a 1,280- by 1,024-pixel resolution system with eight planes of image mem-

ory, cabinet, monitor, keyboard and local firmware, the vendor said.

The Model One/10 uses a 16-bit microprocessor and proprietary VLSI processors to achieve a vector writing performance of 1M pixels/sec. VLSI hardware performs image memory refresh and timing, video refresh and hardware vector clipping and picking. The Model One/10 offers local display and Digital Equipment Corp. VT100 terminal capabilities. The unit costs \$7,960 for 10 planes of memory, monitor, keyboard, all firmware, local display list and program development software, the vendor said.

The Model One/90 is available immediately, the Model One/10 will be available in April, according to the vendor.

Port Drive, North Billerica, Mass. 01862.

#### ENGINEERING AUTOMATION SYSTEMS

EAS/700 Series enhancements

Engineering Automation Systems has announced enhancements designed to increase the on-line storage capabilities of its EAS/700 Series graphics system.

Enhancements include a 40.34-byte Winchester disk drive and an increase in central processing memory to 1.6M bytes.

The EAS/700 is an engineering workstation featuring Microsoft, Inc.'s Xenix operating system and Engineering Automation's PCX printed circuit-board design software and OAX documentation software. The

enhanced version is available now.

The color system is priced at \$48,450, and the monochromatic system costs \$40,750. A system with an eight-color plotter, matrix printer and 1,600 bit/in. magnetic tape drive costs about \$84,000.

*Engineering Automation Systems, 505 Silas Deane Highway, Woburn, Mass. 01801.*

#### CASCADE GRAPHICS DEVELOPMENT, INC.

Cascade X

Cascade Graphics Development, Inc. has introduced a high-resolution computer-aided design and drafting (Cadd) system, the Cascade X.

In addition to the standard 12-in. monochrome CRT terminal, the Cascade X features a 19-in. nonlinear monitor that reportedly provides 1,024- by 768-pixel resolution, dual monitors and Motorola, Inc.'s 68000 microprocessor. The system includes 768K bytes of random-access memory, which the vendor claims offers nearly instantaneous processing of graphics input. Up to eight workstations can be used in a network with the Cascade X, the vendor said.

The vendor said the Cascade X is compatible with older Cascade products, as the products are totally compatible.

The Cascade X system also includes a CPU, keyboard, tablet, joystick, 5M-byte hard disk storage expandable to 80M bytes, a double-sided, 54-in. floppy disk drive for inputting Cascade software and updating or storing drawings. A-size through E-size plotters and a dot matrix printer are optional.

The Cascade X costs \$30,000. *Cascade Graphics Development, 1000 S. Grand Ave., Santa Ana, Calif. 92705.*

#### POWER SUPPLIES

##### DYNAFIVE CORP.

Dynaswitch system enclosure

Dynafive Corp. has announced a current-controlled switch and a system enclosure for Digital Equipment Corp. and compatible products.

Dynaswitch is designed to minimize interference and current surges, sense the on/off condition of ac power to the master outlet and control the ac power to the switched outlets. The system enclosure is said to feature a 40A switch-power supply; an eight-slot quad backplane; six communications ports, mounting for a 54-in. Winchester disk drive; and dual or single 54-in. half-height floppy disk drives or backup tape.

Both products are available now. Dynaswitch is priced at \$135, although quantity discounts are available.

The enclosure is priced at \$1,270 for a rack-mount model, \$1,530 for a tabletop model and \$1,770 for a pedestal model, with quantity discounts available for all three models.

*Dynafive Corp., 12040 Western Ave., Garden Grove, Calif. 92641.*

##### TOPAZ, INC.

Maximum Value Powercenter

Topaz, Inc. has announced the availability of its Maximum Value Powercenter (MVP) featuring its single-point grounding.

The MVP reportedly distributes

## Want to hook IBM?

**Terminals. Personal Computers. ASCII devices. Hook them all into the IBM world with the new AVATAR™ PAM00 Protocol Converter.**

The PAM00 provides low-cost IBM 3270 terminal emulation and coaxial connection to an IBM 3274/3276 cluster controller. Then, a single keystroke switches you back into the asynchronous world through an auxiliary RS-232-C port to access other computer systems, public information services or copy it across to a printer.

Our microprocessor-based unit provides user-selectable rates up to 9600 baud, terminal emulation, and

remote print functions. And, you can hook the PAM00 to a modem for remote dial-in access.

Simple, economical access to the world of IBM, just when you thought there was no answer. At 9600, getting hooked has never been so simple.

For more information on our AVATAR PAM00, call 1-800-345-2222.

power throughout a computer room while providing computer circuitry from pervasive noise. Features include flexible, watertight, shielded cables; 126 pole positions; digital system status monitoring; secondary main-circuit breaker; a ground-fault interrupter; and a building-alarm interface package as standard equipment.

The units are reportedly 90% power-efficient and are available in power ratings of 100-, 125- and 160 kVA, the vendor adds.

MVP units range in price from \$12,500 to \$14,770. Tapan, 2189 Tapan Way, San Diego, Calif. 92123.

## BOARD-LEVEL DEVICES

OMNIBYTE CORP.  
OSM64/1M10

Omnibyte Corp. recently announced the OSM64/1M10, a large-system CPU board providing hardware memory management for multuser systems and other applications requiring protected segments of memory.

The board features the Motorola, Inc. 68010 processor with temporary internal register storage and process retry upon receipt of a bus-error signal, delayed bus-error handling for error detection and correction and virtual memory capabilities.

The Omnibyte board provides from one to four Motorola 68451 memory management units partitioning physical address space into 32 to 128 segments.

System-support functions of the product include a real-time calendar/clock with battery backup, two RS-232C serial I/O ports, a software-definable bit/sec rate generator with 18 standard settings and one 240-bit timer.

The board is priced at \$1,406 for a 32K-byte version and \$1,996 for a 128K-byte version.

Omnibyte, 245 W. Roosevelt Road, West Chicago, IL 60185.

## AUXILIARY EQUIPMENT

SCIENCE DYNAMICS CORP.  
ACT II

Science Dynamics Corp. has announced an access-charge measurement device designed for telephone operating companies to use in measuring, originating and terminating traffic on trunks and lines.

The ACT II system reportedly features electronic metering of the number of in and out accesses and their duration for each time period, with front-panel controls for local readout and programming and security-code protection.

The company reports that two models are available. The ACT-15R was designed for medium to large offices, accommodating up to 266 inputs, mixed lines, trunks and expansions in groups of 16. The ACT 16 terminal is offered for small to medium-size offices and accommodates up to 16 line or trunk inputs.

The device is said to include data collection terminals and a remote data administration system (Rdas), a central processing unit that reportedly polls multiple terminal installations in accordance with the user's billing schedule, computes usage and formats the information to use-de-

## lined specifications.

According to Science Dynamics, the Rdas includes self-test, diagnostic and reporting capabilities.

Prices start at \$1,940 for ACT 16, \$3,160 for ACT-15R and \$36,216 for the Rdas. Delivery, according to the company, is 60 to 120 days after receipt of order.

Science Dynamics, 1819 Springfield Road, Cherry Hill, N.J. 08002.

## SUMITOMO ELECTRIC USA, INC.

## Personal Scanner Bar-Code

Sumitomo Electric USA, Inc. has introduced the Personal Scanner Bar-Code, a hand-held bar code reader.

The product reportedly reads different styles of bar code fonts, including NW-7, UPC, EAN and JAN

fonts. The Personal Scanner Bar-Code interfaces with a number of products, including IBM terminals, the vendor claims. The bar code reader is available as an integrated or stand-alone product.

The Personal Scanner Bar-Code is priced at \$750.

Sumitomo Electric USA, 551 Madison Ave., New York, N.Y. 10022.

SENTEC, INC.  
System II

Sentec, Inc. has announced a security system designed to protect computers from 14 environmental, power-line and man-made threats.

System II reportedly offers monitoring and reaction protection from overheating, transients, power interruptions, humidity, loss of phase,

stable and airborne particles, brown-outs, power-line fluctuations, phase out of sequence and voltage.

The system was designed to cut power to the computer when dangerous conditions called manufacturer-specified parameters.

It is said to feature LED status indicators, audible alarms and a remote status-alarm module. That module is designed to allow personnel at a remote location to respond to fault conditions and shut off power.

It is said to allow interface with an automatic telephone dialer, which can dial preprogrammed numbers with status messages.

The System II is available now at prices starting at \$13,600.

Sentec, 1865 N. Dutton Ave., Santa Rosa, Calif. 95401.

## SYSTEMS &amp; PERIPHERALS

## AUXILIARY from page 65

DISCWASHER  
Clean Runner

Dicwasher has introduced an interactive disk drive cleaner designed to lead the user step-by-step through the cleaning process.

The Clean Runner is said to be a combination program/cleaner that safely cleans disk drive heads, avoiding problems associated with contamination.

It utilizes a lint-free cleaning surface bonded to a polyester diskette and is a dry system.

Suggested retail is \$24.95.

Dicwasher, P.O. Box 6021, 1407 N. Providence Road, Columbia, Mo. 65206.

RECOGNITION EQUIPMENT,  
INC.

## Bar-code reader

Recognition Equipment, Inc. (REI) has introduced a bar-code reader said to read and convert both human-readable OCR fonts and bar codes into computer-compatible information.

The hand-held input device is used to scan OCR and bar-code information interchangeably without operator intervention, according to the vendor. It reads fonts, such as OCR-A Alphanumeric, Multifont Numeric and bar codes such as UPC/EAN, Code 39 and 2 of 5 Interleave.

Suggested end-user price is \$1,800 each, a spokeswoman said.  
REI, P.O. Box 660204, Dallas, Texas 75266.

## VENDORS from page 57

period. That is what IBM appears to be doing with its MVS/XA operating system. IBM created an environment which, it hopes, will allow users to run existing programs while converting frequently used applications to take advantage of the extended addressing offered by MVS/XA.

Burroughs Corp. also appears to be taking the same approach with its proposed A series of mainframe processors. The first model of the A series, the A 9, allows users to run existing programs developed for the B4900, B5900 or B6900 systems.

But this turtle-like transition period is occurring during a time when technology is whizzing past the older mainframe processors. Microcomputers, for example, started out as 8-bit

systems that offered some rudimentary computing capabilities. Within two years, micros have developed into 32-bit systems that are already challenging the performance of low-end minis.

Mainframes are not going to die out, but the dramatic advances in microcomputers may erode their importance in corporations. More segments of companies appear to be bypassing the corporate mainframes in favor of smaller systems that better fulfill their specific processing needs. That trend may improve user productivity, but at what price? Many firms are already finding that control of corporate data is slipping away. There may come a day when the micro users come crawling back to the DP shop complaining they have lost all control over how employees are using their micros.

What happens then? Will it be possible to bring everyone back into the more controlled environment of mainframe processing? Will employees want to give up the independence found in microcomputers? Can a DP department handle all the processing needs of a big corporation?

As the world becomes more dependent on computers, the issues involved with managing information appear to be outpacing the technological developments that created them. The solution may be found back at square one, the mainframe processor. But this time, a mainframe is needed that does far more than just process information; it must manage an entire firm and cater to the needs of each individual within that firm. The task seems impossible for a single machine.

## TANDEM from page 57

and similar applications in which constant manual activity hinders conventional data entry, the voice-recognition feature is implemented on a circuit board that contains enough memory to hold a vocabulary of 300 words.

Scheduled for first-customer shipment in April, the voice-recognition feature costs \$1,800. The 6531 is priced at \$2,100, the 6632 at \$1,950 and Tandem's letter-quality printer costs \$2,900. Both additions to the 663X terminal facility will be available for delivery this month.

EM3270 can be obtained for a one-time, per-processor license fee of \$500, plus a \$20/mo maintenance charge per system. The capability is available from Tandem at 10055 Vallecito Pkwy., Cupertino, Calif. 95014.

"Mr. Nesbitt, this guide to tax regulations concerning small business computer rental expenses is well-organized, concise and easy to read. You'll have to rewrite it."

## IN DEPTH

## Strategies for implementing fourth-generation software

By Paul R. Hessinger

**T**he speed and drama of technological innovation often creates confusion for a firm without a business-driven technology strategy. Part of the challenge is to separate marketing hype from technical reality. A specific new facility may be a major innovation. But does it warrant major modifications to a firm's inventory of computing resources, such as a change in an operating system?

Fourth-generation software is one of the most elusive new technologies. The term creates a gray area between major categories, such as systems and applications software. For example: Is Unix an operating system or a fourth-generation language? Die-hard technicians will suggest that even Cobol and RPG-II have a place in fourth-generation discussions. This "technocratic status quo" tendency is evidence of the necessity for a human factor orientation in an information systems technology plan.

People choose tools they are most comfortable with. They do not always choose the best tool for a specific task. Even the most competent "handyman" will contin-

ue to use a trusted tool rather than experiment. At the other end of the spectrum is the person who is always in search of an easier way, often confused with a new way. These psychological factors should be considered as fourth-generation languages are offered to "third-generation" programmers.

Powerful facilities for automated application development do exist. But even in the third generation, powerful facilities fell by the wayside — the result of indifference by technicians who were not encouraged to understand the new tools; and the result of outright rejection by users (DP and business) unwilling to play a different role in the information systems development process (for example, end users defining their requirements to an on-line dictionary facility).

Those responsible for a technology strategy must, at least for their own corporation, define: a) what a specific tool will involve in terms of processing facilities; b) what user group(s) will utilize the tool(s); and c) necessary and optional interfaces to other components of the overall technology.

It is acceptable that within a broad

*In reality, business objectives, human factors and technological integration are one in the same issue — a management strategy for fourth-generation tools. More accurately, it is a strategy for more productive information processing.*

## IN DEPTH/FOURTH-GENERATION STRATEGIES

category, such as fourth-generation software, specific products will have overlapping facilities. This overlap must be identified before a firm ends up with several tools that breed confusion and unproductive competition among data processing personnel and users. The rationale that the initial purchase price for a fourth-generation product is relatively low often becomes a convenient escape from the re-

sponsibility of carefully selecting and implementing it.

It is unlikely that an industry standard will be adopted in the near future for facilities that qualify a product as a fourth-generation language. Marketing enthusiasts for specific products are already "plotting" the emergence of fifth-generation capabilities. In some cases, these claims are a legitimate extension of product development efforts.

Others are attempts to promote tools that may be a little ahead of their time; our third-generation ignorance must be overcome relative to fourth-generation languages before we are ready for fifth-generation artificial intelligence systems.

A management strategy must control the temptation to take a quantum leap forward in applications development technologies. The strategy must involve a

pragmatic migration to new tools, no matter how powerful they may be. "Revolution" and "cultural change" are alternatives only for those corporations hopelessly mired in second-generation "swamps" (for example, running OS/MP on an IBM 370/165 with 1401 auto-coder emulation and mainly RPO and BAL applications). The technologist must develop a management strategy that considers technical is-

sues and human factors related to the technology.

## General facilities

The following can be stated as general prerequisite facilities in a fourth-generation applications software product for a large system environment:

- a) The primary command language is nonprocedural.
- b) An information/data directory/dictionary controls overall use of the tool.
- c) The system software environment (for example, the operating system and data base management system) is transparent.
- d) The system was designed for interactive use with significant menu-driven, prompted processing.
- e) The system can be used by nonprofessional DP personnel (the type of application to be built determines the necessity of this feature; for example, operational transaction — no, ad hoc query — yes).

Clearly, a broad range of products satisfies these requirements: National CDS, Inc.'s Numad; Oxford Software Corp.'s UFO; Mathematica Products Group's Ramis II; Applied Data Research, Inc.'s Idest; Information Builders, Inc.'s Focus; Collins Software, Inc.'s ADPO; Oracle Corp.'s Oracle; IBM's DB2; Software AG's Natural; and Informatics General Corp.'s Mark V. Each qualifies as a fourth-generation language.

## Useful subdivision

A further challenge faced by those developing and implementing a fourth-generation strategy is to subdivide the languages into two categories:

- 1) Application (transaction processing) generators.
- 2) Information generators.

An application generator is intended primarily for developing structured, data base-oriented, inquiry/update transaction processing application programs.

An information generator is intended primarily for applications that are not fully structured. In addition, the target applications normally involve user-defined information requirements which, in turn, involve dynamic data access paths and reporting formats.

The subdivisions will possess common facilities. The type of applications to be built and the intended users are key factors in selecting a tool from one category or the other. Without this subdivision, the "technologist" will be frustrated by three general types of rejections.

The first is the inability to aim a tool at a specific business target. For instance, the use of an application generator (the tool) is intended to reduce backlog and control programmer head count.

## KEY TRONIC Refines The Televideo-925® Keyboard

key tronic

## IN DEPTH/FOURTH-GENERATION STRATEGIES

(target) through increased productivity.

Trying to build on-line transaction processing (OLTP) capabilities with Focus leads to increased head count for Focus specialists and decreased productivity of other DP personnel (in IMS data base administration, for instance) who attempt to integrate the new tool.

**Moral:** Powerful tool, wrong utilization with little or no business benefit. Focus is an information generator, not an application generator.

The second major obstacle that occurs if fourth-generation languages are approached as a general class of software is a lack of ergonomic sensitivity.

From a technological perspective,

*If relational capabilities and other facilities are arbitrarily employed as evaluation criteria, it is entirely possible that pertinent human factors will be overlooked and users will resist a tool.*

the specific facilities of a given product must take into account the intended user. For example, an information generator (such as Ransie II, with its associated Facility Relate) will be more user-friendly if it employs a relational view of the data to be processed in a specific application. An end user requires simple data structures.

On the other hand, a transaction processing generator may be inhibited by relational-only views unless the generator is integrated with a full-function DBMS that provides for relational and other data structures (for instance, the automatic system facility with DMS/R from Cullinet). Operational transaction processing applications often require complex data structures that are difficult to implement efficiently with relational structures. This difficulty can seriously impede the progress of data base administration and development personnel as they wrestle with the simplicity of relational structures for complex data base designs to support transaction processing.

If relational capabilities and other facilities are arbitrarily employed as evaluation criteria without the recommended subdivision, it is entirely possible that pertinent human factors will be overlooked and user resistance to a tool will result. Certain classes of end users, with the proper training and support, can be productive with semi-procedural languages, particularly those that are dictionary-driven and prompt-oriented. In other cases, users, for aptitude or business responsibility reasons, may be unable to use any language that requires more than pushing a button (full nonprocedural).

#### Case study

Suppose a firm's MIS manager dictates that only nonprocedural tools will be considered in an upgrade of application development facilities. Most "new" applications will be enhancements to existing operational systems. A nonprocedural "application generator" is selected, but it

does not have a convenient interface to procedural languages, which are better suited to the structural portions of applications being implemented. Programmers become frustrated because they constantly must bypass the "applications generator" as existing Cobol applications require procedural changes. Eventually, programmers completely avoid the tool.

The tool is perfect for end-user information retrieval, but was not included in a search for information counter tools because "it didn't have relational or graphics facilities." Although not installed at this site, options for both existed. The tool could be better classified as an "information generator."

The application requirements dictated a fourth-generation language

with good procedural facilities. Because one was not chosen, the facility's programmers now reject fourth-generation languages in general.

#### A second case study

The third obstacle faced by the technologist will be technological disintegration. Consider a second example: a MIS manager focuses on a comprehensive fourth-generation tool with proven end-user capabilities. It has been employed to reduce significantly applications backlogs in other installations. The tool is promoted as a fourth-generation development workstation. However, the "application generator" operates only with that vendor's DBMS. Is it worth the cost of building interfaces to the currently installed DBMS and of restraining the development staff

to support the implementation of end-user-oriented applications? Will the methodologies currently in place be modified to reflect the use of a new tool for operational systems?

Situations like this one often result in an investment of more resources in managing rather than applying the technology. A "new way" of developing operational applications may be a more comprehensive change than implementing an information generator primarily for end-user processing.

Obviously, the selection of a new tool must involve careful analysis of its facilities and the potential impact on how other tools operate. In addition, the selection should be driven by the composition of a firm's development backlog. When reporting applications dominate, an information

# WHEN AMERICA'S TOP CORPORATIONS WANT TO CONTROL THEIR INFORMATION RESOURCES, THEY CALL HOLLAND.

Not so long ago, most companies believed that any information problem could be solved by adding another computer.

And another. And another. Inevitably, the legacy of that approach has been astronomical DP costs, fragmented, redundant database systems. And, ultimately, inaccurate reports.

When those problems began to surface at some of the leading Fortune 1000 corporations, key executives all had the same response.

They called Holland Systems Corporation.<sup>SM</sup>

Working with top people in each department, we helped develop a functional business model of the organization. We then created the framework for designing and implementing shared, integrated data and information systems. And we left behind dynamic guidelines for meeting short- and long-term corporate information needs.

While our top-down Strategic Systems Planning<sup>SM</sup> product

(SSP<sup>SM</sup>) may complement SSP<sup>SM</sup> and similar methodologies, it goes much further. By combining appropriate software, education and method, SSP allows companies to prioritize and control data and information systems development. Often for the first time.

If you're interested in making information more manageable, call us at 313/995-9995 and ask for Marketing Communications.

You'll be in good company. Holland Systems Corporation, 3131 South State Street 5-303, Ann Arbor, Michigan 48104.

SSP is a trademark of International Business Machines Corporation.

**HOLLAND  
SYSTEMS  
CORPORATION**

Putting Information to Work.

## IN DEPTH/FOURTH-GENERATION STRATEGIES

generator will pay off. Technicians will not have to spend time building interfaces between Cobol programs and nonprocedural facilities.

The information generator should have its own "data base management" facilities. This will minimize the impact on a production DBMS, such as IDMS or IMS. The interfaces the tool might have to full-function DBMS can be used as a channel to pass necessary data from production to end-user applications. Data availability does not become an obstacle.

Reverse the situation and consider the impact if an information generator is selected when transaction processing applications dominate the backlog. Even with careful planning and controlled implementation, technicians will fight the technology. When the tool does not fit the type of

*Consider the impact if an information generator is selected when transaction processing applications dominate the backlog. Even with careful planning and controlled implementation, technicians will fight the technology.*

information processing task being addressed, development personnel will attempt to build their own interfaces between the fourth-generation language and conventional tools. The "promise" of those languages begins to disintegrate.

#### Target users

Application generators are represented by products such as ADS/0, Ideal, IBM's ADF II (between the

third and fourth generation?) and Natural.

Information generators include Focus, Artificial Intelligence Corp.'s Intellect (fifth generation?), Nomad2 and Ramis II.

In the background, the architecture of products such as IDMS/IL, IMS/DB2 and Datascom/DB is a key parameter for effective technological integration of fourth-generation languages.

A specific organization considering fourth-generation tools could develop an expanded list of technical prerequisites for each category of these products. Relational views of data, graphics facilities, the ability to merge data with text and so on vary in relevance based upon the category being considered. For example, application generators probably do not need graphics but should have automated documentation, which is facilitated by text processing.

One Fortune 100 MIS organization used the following list of evaluation criteria as it searched for an applications generator:

**General environment:**  
How does the product perform in respect to resource usage?  
■ Response time.  
■ Storage overhead.

How many customers are using it? How long has the product been around? What percentage of on-line application development is done with this tool?

Is 24-hour customer/technical support available?

Can this tool "talk" to the installation dictionary? Does it have its own?

How much education is available? Is there a relational data base available that is integrated with the tool? Can this product be used without a relational data base?

Is user security adequate?  
Is system security adequate?  
Programming/technical considerations

Any batch submission necessary?  
■ For screens.  
■ For test files.  
■ For procedural code (precompiler).

Is the end source language Cobol or tool-related? (Is maintenance done in current technology?)

Where is source stored?  
■ Installation library.

Secure areas within the tool.  
How is DBMS navigation handled?

(Other access methods?) Are data base control blocks defined to the tool or to each application developed on the tool?

Are color CRTs supported? 183-character terminals?

Are PL/I or Cobol exits applicable?

How long does installation take? What kind of personnel resources does it take to install and maintain?

How much on-line documentation help is there? Are the manuals on-line? Are reference cards available?

How long does it take for a programmer to become productive?

How flexible is the procedural code?

Can it be used for prototyping? Is the prototyping effort transferable to the production version?

How good are the editing facilities?

■ Copy previously written code?  
■ Field/line/program easily modified.

■ Copy/rename?  
■ Sequencing used or available?  
■ Scanning facilities?

■ Temporary versions?  
■ Full-screen editing support?  
System concerns

How extensive is recovery from hardware failures?

What is the extent of ongoing maintenance and reorganization?

How and where does it run? Are backups and restores handled?

# IS YOUR COMMUNICATIONS NETWORK BREAKING UP?

**Don't miss  
"MANAGING THE COMMUNICATIONS NETWORK."**

**Exclusively from  
Computerworld Reports.**

How many vendors, how many different technologies does it take to make your network work? How many and users, how many decision makers can it take before something—or someone—cracks up? And does the telephone company break-up mean telecommunications tie-up?

These are some of the critical questions posed by host John Gantz in "Managing the Communications Network," third in a lively, provocative series presented on 30-minute videocassettes and produced by DELTAK and CW Communications.

This month, you'll get the views of an industry expert, an MIS director, and a leading communications consultant. And be sure to stay tuned, because next month's Report will address another vital concern: the AT&T divestiture and its impact on information management. Watch for future

application development centers, artificial intelligence, and user training, the maturing information center, and more.

To learn all the signs of network break-up before your organization cracks up, order Computerworld Reports: "Managing the Communications Network." Call DELTAK order entry at (312) 369-3000, (416) 678-9222 in Canada.

## IN DEPTH/FOURTH-GENERATION STRATEGIES

At the highest level from a human-factor standpoint, the subdivision provides the opportunity to select a tool well suited to the task. If end-user report generation is the task, let the end user evaluate a tool on a trial basis. Imagine an end user being asked to generate an application with ADF. That kind of situation has come up as IBM departments are caught in the fourth-generation language "gold rush."

The recommended subdivision, perhaps somewhat arbitrary, would prevent this situation. Applications generators are DP tools; information generators are end-user-oriented tools. At the very least, the recommended subdivision is a start for an

**While the workstation environment is also applicable to end users, it should be a prerequisite for a fourth-generation language geared to the professional systems developer.**

organization trying to develop a fourth-generation language strategy.

From an ergonomic perspective, when end-user fourth-generation languages are being considered, perhaps defining "end user" in your corporation is a logical starting point.

There are two essential "human factors." First is the nature of the brain. Short-term memory is often used in information processing tasks, and long-term memory is used in analytical, information retrieval-oriented tasks. Consider the question: "Where would I look for a list of current customers?" Long-term memory is scanned as a person tries to remember where the information may be stored.

Preparation of a report is a processing-oriented task. If a fourth-generation language is to be used by an end user, the language must take into account a very limited short-term memory capacity. Psychologists studying human beings as a form of "information processor" have estimated short-term memory capacity as seven plus or minus two "chunks" of data. In a request for a report, an end user would probably need to define in his short-term memory at least the following:

- Name for the report.
- Where the data will come from.
- Basic fourth-generation language command(s) to be used to request the report.

If each item is considered as a chunk, the limits of short-term memory are not exceeded. If a user could enter "Report 'Current Customers' from Customer File," then this fourth-generation language would surely be user-friendly.

It is what happens next that determines if the product is ergonomically sound. If the fourth-generation language prompts the user for other parameters (for example, lines per page) and uses standard information (such as file layout for master files), then short-term memory capacity is efficiently used for processing tasks (defining specific fields of data required). It is not cluttered with items from long-term memory, which remains an analytical tool.

The technical facilities of the product must consider that a user will be involved in other tasks as he employs a fourth-generation language. A limited number of commands, an English-like syntax and short- and long-term memory "assistants" (prompts, dictionary) are examples of favorable ergonomic capabilities in an end-user-oriented fourth-generation language.

The second major human factor, of course, is the user's interface to the fourth-generation language. Two extremes are desirable — English language and pushbutton. In the first, a user formulates a request as if he were talking to another human. (Intellect is a leading product on the market in this respect.) In the second, a user selects options from a menu by depressing a key or

touching the screen. IBM's dialogue management facility is based upon this concept. An end-user-oriented fourth-generation language will benefit ergonomically from a combination of the two.

A user should not be expected to learn a new language (nonprocedural or otherwise) for defining the information he requires.

Fourth-generation languages for DP professionals — application generators — will benefit from architectural attention to the same human factors. In addition, the comparison of an application developer to an engineer identifies another key ergonomic factor. The development of an on-line transaction processing application involves a number of distinct tasks:

- 1) User requirements definition.

- 2) Initial screen format definition.

- 3) Data requirements definition.

- 4) Translation of 1 and 3 into "control blocks."

- 5) Procedural code generation.

- 6) Controlled interactive testing.

- 7) Installation into production environment.

- 8) Documentation.

The "application engineer" should be able to reference common components such as a data base segment layout from a "parts data base." The application generator should permit the developer to proceed through the various tasks without interruption. Ergonomically, fourth-generation language must provide a workstation environment. Ideal from ADE is a good example of this concept.

While the workstation environment is also applicable to end users,

## IN DEPTH/FOURTH-GENERATION STRATEGIES

attitude survey have been overcome, as reflected in a new survey.

#### Backing up management

In addition to the technology being considered from a human perspective, a management strategy must also include clearly defined organizational responsibilities for fourth-generation tools. If the recommended subdivision of fourth-generation languages is applied, then application development centers and information centers become natural "homes" for each category of fourth-generation language.

Without the subdivision, the application centers may end up "competing" with information centers for new tools. Generally, application generators are best suited to the former environment, information processors to the latter (end-user oriented) environment.

These organizational entities are also essential in a human factor-oriented fourth-generation strategy. Application development center and information center "consultants" must realize that marketing the new tools is as important as, if not more important than, understanding the new tools.

A programmer will accept an application generator much better if the application development center consultant understands the tool and is sensitive to a programmer's uneasiness with the new technology.

As with any new technology in a business environment, an organizational entity must be assigned the responsibility for the ongoing support of new tools. Without this responsibility, a management strategy may be disabled by the very tools on which it is based.

#### Complementing technologies

It is often difficult to separate human factors from management strategies as fourth-generation languages are investigated. Simply being conscious of one may lead to the other. Another approach, if ergonomics and strategies have been overused in your environment, is to consider implementing techniques along with the new tools that together will define a fourth-generation methodology for information systems development.

Prototyping is perhaps the most publicized fourth-generation methodology. At its most fundamental level, it is a technique for more effective end-user information requirements definition. Successful implementation of the technique, however, requires a balanced emphasis on the three elements that have been the focus of this discussion—business orientation, ergonomic sensitivity, technological integration. By definition, a prototype is the first thing or being of its kind, an original working model. Prototyping, then, is the development of the original, working model. Clearly, the development of a prototype requires at least three components:

- A statement of requirement—what is the model to do?
  - "Manufacturing resources," which facilitate the engineering of the prototype.
  - An environment for testing the "first thing or being of its kind" which approximates, if not duplicates, the working environment of the end product.
- The development of simulations and prototypes is a design catalyst.

*In reality, technological and economic barriers inhibited the generation of simulations and prototypes in conventional operational business system development. The system development life cycle became more and more bureaucratic as organizations attempted to control the process better and assure a higher quality product.*

The techniques result in tangible entities which translate concept into requirements into general design into detail production specifications. In a past implementation environment, the techniques are valuable control points for maintenance and redesign. This process is an engineering life cycle. In theory, it is the way in

which data processing systems are built. "Third-generation" system development life cycles suffered from too much preaching about and too little practice of:

- User-defined and approved system requirements.
- User participation in design reviews.

- Controlled development, for instance, program walk-throughs.
- Change control procedures to avoid unwarranted "corrective designs."

In reality, technological and economic barriers inhibited the generation of simulations and prototypes in conventional operational business system development.

The system development life cycle became more and more bureaucratic as organizations attempted to control the development process better and assure a higher quality end product.

The promise of fourth-generation languages? A cost-effective means of implementing the simulation and prototyping concepts.

For the on-line components of a typical order processing application,

## PICK UP WHERE IBM LEAVES OFF.

You're busy. You don't want to pick up IBM's PC. Because we give you everything you've ever wanted in an IBM-compatible PC and more. For a great deal less.

#### COMPATIBLE AND MORE.

Our systems run all software that conforms to IBM PC programming standards. And the most popular software does.

We deliver twice the memory, with room for eight times as much.

We deliver a fast-access 320K floppy drive, a communication port and an improved IBM PC keyboard with indicator lights.

Our systems include high-resolution monitors (12" desktop, 9" portable) for crisper, cleaner displays, and both have built-in high-resolution graphics (640 x 325).

You get a complete system, ready to go to work.

#### MORE VERSATILITY.

With all the necessary features built into the main unit, the four expansion slots can be used for your special needs. For example, color or our optional 10MB hard disk.

...or more disk types that works many times faster than disks.

#### PLUS SOFTWARE.

Our systems come with the operating system: MS-DOS.<sup>2</sup> A programming language:

GW BASIC.<sup>3</sup> A training course: PC Tutor.<sup>4</sup> A professional word processor: MultiMate.<sup>5</sup> Plus DOS utilities and demonstration programs. Or you can get the p-System<sup>6</sup> from N.C.I. and write or run portable Pascal packages.

#### ALL FOR A GREAT DEAL LESS.

Even with all the extra features and performance, our systems still cost significantly less than the equivalent IBM PC.

Drop by your nearest CORONAT PC dealer for a very convincing demonstration. Or contact us at 31324 Via Colinas, Westlake Village, CA 91361, (213) 991-1144 or (800) 621-6745 toll-free. Telex 658212 WSLK, in Europe 76066 CDS NL.

# IN DEPTH/FOURTH-GENERATION STRATEGIES

for example, a simulation should be developed to refine user requirement statements and to establish an initial architecture for implementing the application. The simulation is developed iteratively, focusing initially on external capabilities and then proceeding to processing flow. User involvement in the simulation process is key.

However, there is a catch-22 to simulation. Users are what they want and they want it delivered quickly. But the simulation isn't a working system. Do you bore or intimidate your users with the necessity for detailed program specifications, data normalization and data base design? No — you move forward with the application engineering effort (see Figure 3).

Prototype development follows

the simulation effort. The detail design of the application begins to take shape. But the prototype begins to deliver basic functionality to an end user. Once the prototype has been implemented and perhaps refined, a detail design can be "frozen." Production application development can then begin. This might involve fine tuning the current prototype. In certain cases, it might involve a major effort to produce an application that will operate efficiently in high-volume processing environments. The prototype typically will not involve integration with other major applications.

"Application engineering" is a re-orientation of a third-generation development life cycle that incorporates the distinct techniques of simulation and prototyping. The

benefits? Applications that can be engineered faster with fourth-generation languages, with a higher degree of end-user satisfaction and business impact as a result of the emphasis on user defined requirements.

Skepticism about the feasibility of these techniques arises from two major misconceptions. The first is that in a typical IBM mainframe environment, there is not a single software product that enables the implementation of the simulation/prototyping techniques. The second is that the techniques are not applicable to large on-line data base systems; the misguided assumption is that prototyping is a euphemism for end-user computing.

Products such as Ideal and IDMS clearly offer the promise of fourth-

generation languages to major operational system development projects. Benefits will be attained based upon a carefully directed use of the technology. Prototyping in this context is a strategy for the successful use of fourth-generation products.

If you work in an IMS installation, don't despair. There are products that enable the implementation of these techniques.

The subdivision of "fourth-generation language" into applications generators and information generators is directly related to a successful implementation of simulation/prototyping. When functionality, efficiency and long-term viability are the dominant business design criteria for a major information system, a formal, rigorous approach is mandatory. Application engineering with a heavy dose of simulation and prototyping mixed with conventional techniques is such an approach. A fourth-generation language application generator will be the enabling technology.

When discussion of a new information system centers on "end-user involvement," "throw-away systems," "decision support" and "ad hoc specifications," prototyping is not a miracle solution. An information generator will probably be the enabling technology. In this context, a rigorous methodology is not required and, if applied, probably would be an inhibitor.

Prototyping is synonymous with a management strategy for effective requirements definition for major business information systems.

If prototyping is casually embraced as a replacement for third-generation structured techniques and bureaucratic system development life cycles, then it will remain a mystery if not give way to myth. To be sure, the fourth-generation tool will be blamed if productivity does not improve: "The tool just wasn't the right one for prototyping — the end user couldn't figure out how to use it." The strategy for fourth-generation language must include a revised approach for requirements definition. Prototyping is a technique for that.

The ability to develop prototypes becomes another evaluation criterion. But prototyping will involve different characteristics in transaction processing vs. information-oriented applications. Seldom will an application generator produce prototypes for end-user-oriented applications. The reverse is also true.

## Degree of development

It must also be realized that prototyping will be used in conjunction with conventional approaches to systems analysis and design. In some cases, a developed prototype may deliver 95% of the required processing. In other cases, it will only scratch the surface. In the latter case, prototyping must be viewed as the tip of an iceberg — a fourth-generation systems development life cycle. In this context, "prototyping" is synonymous with a management strategy for fourth-generation languages.

What then are the keys to the resolution process that will translate fourth-generation tools into business benefits?

First, commit to the development of an information systems technology strategy. Establish at least one full-time resource (call the person

 HITACHI

## IN DEPTH/FOURTH-GENERATION STRATEGIES

"director of technology assessment") with the ongoing responsibility for the strategy. The person will not be an expert in every area of technology, but through research, will identify technology alternatives and then look to specific areas within the MIS organization to assist in detail evaluation.

Second, classify and understand the technology. The primary technology focus of this discussion was on fourth-generation languages. Subdividing these languages into application generators and information generators permits a more manageable evaluation of the facilities and requirements of specific products.

Third, do not overlook the fact that the new tools may require new techniques to guide the initial and ongoing utilization. Techniques such as prototyping reinforce the subdivision of fourth-generation languages. Prototyping may be another base for end-user computing if the right tool is selected for information generation. In other cases, prototyping will require a transaction processing generator to facilitate requirement definition for production applications.

Fourth, and perhaps most important, consider the people who will use the application and information generators. Involve them in the selection, train them in the implementation and monitor and support their utilization of fourth-generation language. The application development center and information center are the functional areas that will translate the technology strategy into a tactical plan for the effective use of

fourth-generation languages.

Fifth and finally is an issue that has been transparent to the discussion thus far. In a specific organization, basic business data is relatively stable, while associations between data can be dynamic. New information requirements may involve different levels of communication and/or different combinations of the basic data. The development of a data architecture for a business implements the data base concept in a very pragmatic way. The data architecture will identify what data is necessary for a business, where it is and how it is used and will assist in establishing controlled access to data from a wide variety of processing tools, including fourth-generation languages.

#### About the author

Paul E. Hunsinger is director of Advanced Technology Research for Computer Task Group, Inc. in Englewood, N.Y. He conducts approximately 125 professional seminars annually. Among those last year were "Programmer of the Future: Person or Machine," a featured presentation at the International Association for Systems Management Conference in Boston, and "The Fourth Generation Blueprint for a Data Base Environment," for the International Data Processing Management Association conference in Baltimore.

Hunsinger lectures for organizations such as the Gardner Group on strategic planning and the future direction of information systems technologies.

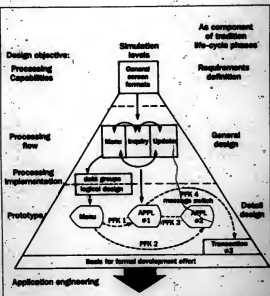

Figure 2. Multiple levels of the simulation are maintained during the design process. Throughout the development life cycle, any requested changes can be evaluated at the highest level to assess impact fully.

**"If you want to do OEM computer business in the U.S., you'd better go to the Invitational Computer Conferences in Boston, Dallas, Minneapolis, Orange County Washington, D.C., Los Angeles, Ft. Lauderdale, ...We do!"**

Experienced marketing management knows that the best way to reach the technical decision maker/buyer is to meet him where he lives and works, demonstrate operating equipment and provide him with the technical information he needs.

Over the past 12 years successful marketers have found the Invitational Computer Conferences to be the most cost-efficient, effective method of covering their U.S. computer industry customer base.

The exclusive, one-day OEM conferences will be held in ten major market areas throughout the United States

## HOW THE TERMINALS THAT GIVE YOU SO FEW PROBLEMS CAN WIND UP GIVING YOU NONE AT ALL.

© 1984, Teletype Corporation.  
"Teletype" is a registered  
trademark and service mark  
of Teletype Corporation.

While we at Teletype Corporation like to talk about our terminals' remarkable record for reliability, we have to admit that every once in a while you just might have a problem with one.

But if you contract with Teletype's Product Service Organization, getting good service is no problem at all. That's because no one can service our full line of CRT's and teleprinters, as well as our service technicians. Each one of them is a company-trained, job tested professional who must continually meet our expectations—and yours.

Help is never more than a phone call away since our technicians are on-call 24 hours a day, 7 days a week. And with our network of 100 offices nationwide, we're able to provide fast response time, even to remote areas. You can contract with us for response times as low as 2 hours, or less, as your needs dictate.

But at Teletype, we feel there's something more important than fast response time. And that's fast restoral.

So when our technicians call on you, they'll have the necessary test equipment and original Teletype® parts to get your terminals up and running in no time flat.

We'll even help solve problems before they occur with scheduled preventative maintenance. You can also choose our installation service option that includes everything from getting your terminals on-line to user orientation. It's all a part of our Full Service Maintenance Agreement.

So to keep your problems from becoming big problems, write Teletype Corporation Product Service Organization, 2330 Eastern Ave., Dept. 2800-A Elk Grove Village, IL 60007. Or call toll free at 800-323-4226, ext. 300. (In Illinois, 1 800 942-4192, ext: 300.)

## IN DEPTH

## Roles DP managers must play

By Marsha Sinetar

William James, considered by some psychologists a more accurate thinker than Freud in defining human behavior, wrote decades ago that if an individual wants to change his personality, he has to change his actions.

Similarly, a manager who wants a better chance at success will benefit from acting as if a given role were natural. Large rewards come from having an adaptable personality.

Successful managers communicate like natural, if not born, actors. However, most people trained in technical fields have not learned the finesse and authority of speaking, listening to or directing a group. Being "at home" with others is not necessarily an inborn trait. The technical professional must learn a new cluster of communication skills, which takes time, patience and a lot of practice.

Management communication, linked to

the notion of life-as-performance, is not a new concept. However, as the qualifications for professional managers expand beyond just a financial strategic planning profile to include "people skills," the idea is receiving new attention. Now communication skills and management success are linked more tightly than ever.

Italian psychiatrist Robert Assagioli observed, "One of the most important and illuminating aspects of the analogy between acting and life concerns the relations between the personality of the actor ... and the characters he sequentially impersonates, his 'mask' in a psychological sense."

Managers must play several roles in order to be successful. If their masks reflect only one side of their personality or falsely portray a warm, caring nature, they are miscast, distrusted; their attempts at communication fall flat. When employees feel the boss is a phony, his behavior is often a sign he is unsure of

*A manager must wear several masks — adopt roles — to be successful. He needs to improve his communication skills as if he were perfecting a hobby or sport. There are three masks he should learn to assume, as should any entry-level manager and probably senior executives as well.*

## IN DEPTH/ROLES MANAGERS PLAY

## what role to play.

A manager needs to improve his communication skills as if he were perfecting a hobby or sport. In fact, there are three basic moods he should learn to put on.

**Mood 1 — The manager as administrator.** How well each department head orchestrates subordinates to achieve scheduled goals makes the difference between mediocre and outstanding performance in this role. Administration is the nuts-and-bolts mood, the technical, organizing, planning and budget management part a manager must play.

Managers must communicate about progress, priorities and schedules. These demands require precise communication, an ability to talk about how each person's job fulfills departmental commitments. This kind of discussion sets the stage for talking about productivity, how the group and/or individuals can accomplish team goals in a systematic and orderly way.

Most managers are pretty good at the technical and organizational aspect of their roles. Retired military officers wear administrative masks particularly well, as do others who are structured, rational and self-disciplined.

A close focus on details helps employees maintain direction — time cards, expense reports, delegation of authority, responsibility and so on. For the manager-as-administrator, communication is relatively straightforward and objective. These messages can be put on paper, charted and graphed.

Because administrative communications can be easily measured, the role requires an accurate reporter of facts.

Other key management roles may be more complicated, thus more easily touched. Rarely are administrative managers successful in senior management roles unless they are also adept at playing other parts. If, however, an administrative type owns the company, then everyone else must be a good actor.

**Mood 2 — The manager as leader.**

- Respected by fellow workers.
- Independent, willing to make tough decisions alone, solves dilemmas.
- Responsible, persevering, energetic and enthusiastic.
- Optimistic, highly self-confident.
- Has a dominant personality, enjoys influencing others.
- Has new insights into problems.
- Sees the big picture; isn't bogged down with details that bother others.
- Assertive or capable of learning assertive behavior.
- Has a deep sense of self-worth, self-sufficient, self-reliant at heart.
- May be idiosyncratic, has the ability to stand away from the crowd, may even be a loner.

- Words/actions bring security to the group.
- Speaks with personal vision.
- Uses positive words, tone, has vigor, energy, drive.
- Motivating.
- Tolerates ambiguity, helps others do the same.
- Releases stress, helps others manage their stress.
- Words and actions unify the group.
- Communicates well in sensitive social situations, has finesse.
- Willing to take a stand.

- Group's well-being tied to own well-being.
- Mature, well-developed character structure.
- Understands the psychology of authority.
- Responsible for the well-being and growth of subordinates.
- Excellent judgment skills.
- A good leader, guide and insightful critic. Acts as a mentor, never compares with the subordinates.
- Responsible for group/individual conflicts.
- Has clear, understandable values that coincide with organizational values.
- Has positive feelings toward subordinates/superiors.

- Communicates affection for the group.
- Speaks authoritatively and fairly, especially during times of stress or uncertainty.
- Gives ongoing guidance and feedback.
- Acts and speaks as he is to guide, teach, correct, groom others.
- Words and actions show high expectations for excellent results.
- Speaks clearly.

- Orderly mind-set.
- Acts in a timely, systematic manner.
- Actively report, respected by group for experiential background.
- Helps group solve technical problems without getting bogged in details of the problems.
- Understands the big picture.
- Able to stay within budget.
- May be perfectionistic, but doesn't insist others become that way.

- Orchestrates the team for a systematic, orderly and timely goal accomplishment.
- Reminds team and individuals of schedules, progress, updates.
- Helps group handle details of its job.
- Includes routine aspects of the job.
- Helps others gain organized, constructive group members.

These basic clusters of skills show the relationship between communication and management success.

er. Managers must not only be good leaders; they must also act like leaders. Few are gifted enough to play this role without training, but not many organizations provide such development opportunities. This lack probably accounts for many of the ills industry has experienced in the past decade — labor-management problems, high employee turnover and apathy, absenteeism, lack of team spirit and others.

To understand the manager-as-leader role requirements, it is helpful to know just what a leader is and

dom. Oddly, it is the leadership dimension of a manager's performance that industry has most frequently overlooked, underdeveloped and misunderstood. All too many companies promote people into supervisory positions and then into upper management roles without ever considering their leadership talents.

Seniority, technical expertise, politics and other irrelevant criteria are the usual factors in promoting people to "starring roles." I've often heard young enthusiasts from my corporate client organizations say

they are "due a promotion" because they've been around a given period of time. Companies that market the "due-a-promotion" policy based on longevity are asking for mediocre managers.

There are at least 20 personality traits that go into a leader's character structure, involving maturity of thinking, interpersonal skills and outward behavior. Two years ago, I was on a select panel of social scientists and educators gathered by the California State Department of Education to see if we could identify the characteristics and behavior of leaders.

Leadership was determined to depend on both character structure and on the leader's situation. Leaders were identified as people whose actions and words brought solidity and cohesion to a group. Leaders were found to be skilled at pulling people together — nonleaders, on the other hand, had a disruptive effect. The nonleader increases the anxiety of the group and divides it. Anyone who has ever heard his superior communicate a new company policy in a lukewarm, apathetic or mechanical fashion understands how easy it is to separate a group from organizational goals or values.

To play the leadership role correctly, it is not enough to have a leader's personality. Because leadership is dependent upon the situation a manager is in, it is necessary to act and speak in leader-like ways in specific work-related arenas. Leading does not necessarily mean being popular (doing or saying the expected, approved-of thing). It does mean that managers who can act like leaders bring long-range unity and cohesion to all elements of their departments.

Executives possess varying degrees of talent when it comes to playing the leadership role. Some

## Here are a few good reasons why you should make Local Data your protocol converter company.

Local Data's comprehensive line of local and remote protocol converters have been used around the world to make async-to-IBM communications simple and economical.

**DATALYNX®/3274**

Datalynx®/3274

remote async ASCII

protocol converter supports

SNA/SDLC or

BSC protocols. 80 types of ASCII

async printers can emulate IBM

528X printers.

**DATALYNX®/3780**

Datalynx®/3780

async ASCII-to-IBM

3780, 2780 and 3741

protocol converter supports

EBCDIC BSC protocol on

one channel and async

ASCII devices on the other

two channels. Features

include transparency, mini/micro support and free

file transfer program.

**INTERLYNX®/3278**

Interlynx®/3278

allows the attachment of

file transfers.

**INTERLYNX®/3287**

Interlynx®/3287

allows attachment of ASCII

printers to IBM Type "A" coax ports or 3274/3276/

4701 controller and 4331/4331 CPUs.

SNA LU1 SCS and LU5 capability are standard

with the Interlynx®/3287. Features include parallel and

serial ports and front panel set-up.

## IN DEPTH/ROLES MANAGERS PLAY

managers have departments beset with problems after the merger is announced. Others continue running a smooth, business-as-usual shop, even helping subordinates cope with uncertainty, ambiguity or the possible loss of a job. These people are, without exception, leaders.

Acting or talking as a leader means a willingness to be visible, authoritative and responsible. These traits are found only in people who

praval. They're acting just like my own kids, but I don't want to be their father."

This senior manager reluctantly came to understand that one of his key functions is to act as a parent authority figure on occasion. That management role is one of the masks he must wear if he is to be effective. When he needs to set standards, when he wants to correct or upgrade work or simply say how he wants a matter han-

died, he is, like it or not, stuck with a parenting role just like every other manager is. Like it or not, communication happens in the perceiver, and employees perceive managers as authority figures when certain types of communications are delivered.

The manager issues parental messages based on a right/wrong or teaching function. This part implies correction, appraisal, judg-

ment, guidance and even nurturing. Reviewing performance, for example, is a routine part of management's job. But little, if anything, is said about the resulting parenting/teaching aspect involved in this procedure. Managers who have clear, understandable positions, who are willing to comment when work is marginal or when it is superior, can function successfully as parent figures.

Some managers, considered old-fashioned or even backward by peers, are successful because they firmly provide what their staff needs in the parenting domain. One of the most effective managers I've ever met is a woman with little or no formal education or management training. She also happens to be the mother of nine children who has realized on her own the connection between her role as a parent

**Only a leader can develop leaders. Only a person who has pulled away from the crowd and has done the personal confrontation work that is a prerequisite to developing leadership skills can inspire these abilities in others.**

have cut the umbilical cord with group opinion and who are able to stand alone when the going gets rough. It takes time to develop the latent leadership characteristics in the average manager's personality, especially if the manager lacks self-confidence.

Only a leader can develop leaders. Only a person who has pulled away from the crowd and has done the personal confrontation work that is a prerequisite to developing leadership skills can inspire these abilities in others.

Although American industry loves short workshops and one-day seminars because they are cost-effective and save time, it is highly doubtful that such sessions can develop leadership behaviors that stem from a strong sense of self. A developmental program conducted within an organization over a period of time is more likely to cultivate leadership talents, depending on who facilitates the program.

Many executives favor training programs because they are "safe." In a classroom situation—even if involved in team games or simulations—they can often camouflage their tendencies to avoid the rough issues. In the work setting, such camouflages are likely to be revealed over a period of time.

**Mask 3 — The manager as parent.** One of my more distinguished and intellectual clients said to me in a moment of utter frustration, "I don't want to be a parent to my staff! They're adults. But they're driving me crazy with their time-consuming bids for my attention and ap-

## IN DEPTH/ROLES MANAGERS PLAY

*Acting or talking as a leader means a willingness to be visible, authoritative and responsible. These traits are found only in people who have cut the umbilical cord with group opinion and who are able to stand alone when the going gets rough.*

and what she does daily on the job with subordinates.

The manager who is unafraid of the parental role and who is adaptable to its communication requirements is the one who will probably avoid being victimized by subordinates. Employees respond to authority in much the same way they did to their parents. Office "complainers," for example, are typically people who received attention as children

when they complained about little things. The office "star" learned in childhood that the surest way to get love and attention from adults was to excel.

Then there are the employees who simply do not want any and all authority. Some of the most difficult employees to deal with are aggressive types or passive-aggressive types who hide their anger at authority figures but sabotage direction and correction.

These employees hide so much anger that they defeat themselves and others, although on the surface they are compliant.

It boils down to this: Managers may not want to be parents on the job, but they are anyway by virtue of employees' response to authority. Managers can only be fully successful when they accept and understand the psychological aspects of the parent role and communicate accordingly.

### More managerial roles

There are, of course, other roles to be played — the manager as mediator, for example. The manager with peacemaker abilities can be a star.

Most managers, however, are not natural mediators. A growing number of companies retain executive mediators who can objectively help pull diverse perspectives into a whole as they solve problems. In the process, these mediators also act as role models for those who are involved in the mediation process.

Then there's the manager-as-coach role. (Like versatile actors, the manager who fits the leader/parent role would also fit well here.) A coach must be able to motivate his staff. The manager who has coaching ability can add color, vigor and vision to otherwise dull situations. Most companies, aside from sales organizations, are short of coach/manager types. This shortage is especially acute in engineering, high-tech companies and certain legal/health-care businesses where task-orientation is the focus of communication.

Organizations rarely make clear distinctions about the variety of roles and forms of management communication. Business schools have not focused enough attention on the psychological side of management. It has become increasingly difficult to translate the word "manager" into a comprehensive term with behavioral ramifications.

However, it is still possible to enlarge the conceptual framework of the management function. By visualizing the variety of roles and the many communication nuances each task demands, managers can become more flexible in responding.

# MICROCOMPUTERS

## Software piracy: How serious is it?

### INSIDE BITS

THOMAS W. MADON

Over the last two or three years, few issues in microcomputing have received more attention than software piracy. It is difficult to define the meaning of software piracy. A narrow and somewhat legalistic approach would suggest that software piracy is the duplication of copyrighted materials for resale. But a broader interpretation may also be acceptable, namely, the reproduction of copyrighted software for redistribution, regardless of whether it is for resale.

Aside from the ambiguity in its definition, the issue of software piracy is further confused by the software licenses implicitly accepted by those of us who buy microcomputer software. These licenses typically stipulate that it is a violation of the license agreement to use the software on more than one machine, even if those machines are personally owned by the buyer and used by him or her. This is somewhat akin to the idea of a book publisher attempting to license a book to be read only in the front bathroom and not in the back bathroom.

It is apparent that the current copyright laws are not always relevant to computer software. This is because copyright laws come out of a tradition oriented to printed matter rather than electronic media.

For example, it is allowable under the copyright laws for small parts of copyrighted material to be reproduced for educational purposes. This is fine for printed material, but it is difficult to imagine a situation in which one could take and reproduce a small segment of machine language from a compiled computer program that would serve any meaningful purpose, educational or otherwise.

Clearly an author, or other holder of copyright, should have protection. But we have not yet arrived at a clear-cut answer to what that means in terms

See PIRACY page 52

## Windowing seen gaining praise But pundits question its usefulness

By Paul Hertzendorn  
CW Staff

One of the hottest buzzwords in the microcomputer industry these days is multiple windowing. This feature allows users to monitor up to seven concurrent functions on a single CRT screen, often giving the user the ability to hop from one application to another and to share data among several related programs. But how useful is the feature? Microcomputer vendors will say you cannot live without it. But some industry watchers believe multiple windowing may be a passing fancy.

"Many vendors are designing windowing products, yet its usefulness hasn't been proven," noted Janice Antonelli, research manager for software and services at International Data Corp. in Framingham, Mass. "It may be useful for multitasking applications, but I am not sure it has many other practical applications."

In fact, some industry analysts contend windowing packages, like the environment offered with Apple Computer, Inc.'s Mac-

intosh, are no better than integrated applications, which share data without requiring that a user change desktops. The advantage is the integrated applications are all visible on one screen, requiring the user to press a function key to move from

spreadsheet to word processing functions.

Other windowing software, such as Digital Research, Inc.'s Concurrent CP/M 3.1 and the package that works with Apple's Lisa system, offer multitasking capabilities. "The user can monitor one application's progress while using a different application," noted Gary Gysin, director of product marketing and manager of the Operating Systems Division at Digital

Research.

"For example, a user could work on a spreadsheet while a data base sort is completed."

The number of windows offered by various packages typically runs from four to seven. But how many can the user use at one time?

"Most of our users monitor two or three

See WINDOW page 52

## DM Data offers management aid

SCOTTSDALE, Ariz. — DM Data, Inc. has announced a management planning aid for scheduling estimated procurement costs for very large-scale integrated circuits.

Called the Computer-Aided Management Planning System (Campe), the planning aid consists of a workstation that utilizes an "expert" software package, which provides artificial-intelligence-like assistance for solving problems on a lap-type portable computer.

Campe follows English prompts and features a program checklist; suggested ap-

proaches; standard cost factors for planning, tooling, prototype and circuit; projected standard time schedules; probability of success factors; and graphic comparisons of approaches.

A Campe package costs \$2,850, including expert-system software (Campe I) programmed in a briefcase-size portable computer; a set of instructions and notes; and a half-day seminar covering the system operations and applications.

More information is available from DM Data, located at Suite 700, 6900 E. Camelback Road, Scottsdale, Ariz. 85251.

## Quality you expect, at a price you don't.

BECK DOUBLE DENSITY DISKETTES

SINGLE SIDED \$2.19/\$2.79 DOUBLE SIDED

Our message to you is simple: If you like the quality of Data, Verbatim, 3M, et al., you'll like the quality of Beck soft sector.

Why does Beck cost less?

Our philosophy is: Excellent quality and reliability, at a cost that beats the prices of all other diskettes. We can do it because we (1) don't charge for the premium, but mega-marketing schemes and fancy packaging; and (2) sell our money-saving 25-diskette pack to you direct via a toll-free order line, so you get fast, door-to-door service efficiency.

Order Now Toll Free

What about quality and reliability?

At Beck we take no shortcuts. You get the best because we are committed to excellence. Every diskette is manufactured to very strict quality standards. • Full Year Warranty • 100% Certified, 100% Error Free • Satisfaction, Money Back Guarantee • Made in America (JPL) Manufactured

1-800-BECKMFG

Order Toll Free 1-800-252-5834. Available in 25 pack only, plus freight. Double density soft sector diskettes complete with hub-reinforcing rings, 7-year warranties, color-coded user labels, and nonmagnetic write-protected tabs.

Door to Door in 48 hrs.

Deposits Accounts Welcome • Cash On Order

An office automation system that can't support everyone in your corporation can lead to some very shocking experiences.

### The right power to the right people

That's why Exxon Office Systems now offers more practical office automation solutions that help everyone in the corporation to be more productive. With the Business Support System, Exxon extends its fully integrated line of office automation products to support managers, professionals, and administrators, as well as secretarial staff.

Exxon puts it together for everyone with a fully integrated system — with full communications flexibility that lets you access outside data bases and interact with most mainframe computers. Without the complications. Without the shock.

### Office automation for those who shape the corporation

The Exxon Business Support System features the new EXXON 750 Professional Workstation, specifically designed with powerful, integrated software that lets you move instantly from text to graphics to data processing — without changing programs.

You can divide the high resolution bit-map display into several windows and work in a number of functions simultaneously. You can shift infor-

The EXXON 750 Professional Workstation gives you the power to use data, graphs and text in any combination.

mation from one window to another. You can preview the page layout, and produce an integrated text/graphics document on our quiet EXXON 965 Ink Jet Printer. Or on a color plotter.

Best of all, the flexible design of our new Professional Workstation is ready for adaptation to the most popular operating systems and network interfaces.

### Tying everyone together

At the core of the Business Support System is the EXXON 8400 Series controller. With its UNIX®-based operating system, it can integrate all levels of workstations to share information and programs. Everyone can keep track of schedules and meetings with time management and calendaring functions, whether their workstation is an EXXON 500 Series Information Processor or a new EXXON 750 Professional Workstation. And everyone can send and receive messages easily with transparent electronic mail.

### An expandable, shockproof family

Exxon protects your office automation investment by making every

workstation — from the EXXON 500 Series to the new EXXON 750 Professional Workstation — fully expandable and upgradeable. So if you've already begun an Exxon system, the latest Exxon advances are completely compatible with our current product line.

And with our worldwide sales and service organization, you can be sure that when you need assistance, Exxon will be there.

That's how Exxon incorporates everyone — in one shockproof family.

### For more information

## MICROCOMPUTERS

## SYSTEMS

ELECTRO DESIGN, INC.  
IMP-13

Electro Design, Inc. has announced the IMP-13, a microcomputer that uses IBM's PC-DOS 3.0 operating system and is compatible with the IBM Personal Computer.

According to the vendor, the 13-bit processor can handle up to two half-height drives, either floppy or hard disk.

The floppy disk drives are 5¼-in., double-sided, double-density with 500K bytes of unformatted storage, according to the vendor.

The hard disk drives are available with a 13.34M, 20.70M- or 40M-byte capacity.

The IMP-12 CPU is Intel Corp. 8088 based and features a read-only memory resident Basic I/O that offers Microsoft, Inc.'s MP-DOS calling conventions, plus extensions for scientific and industrial applications, the vendor said.

List price of the IMP-13 starts at \$3,425.

**Electro Design, 600 Rancheros Drive, San Marcos, Calif. 92069.**

ET COMPUTER SYSTEMS  
ET-3010

ET Computer Systems has introduced ET-3010, a microcomputer that uses a Zilog, Inc. Z80 microprocessor.

The computer features 64K bytes of random access memory (expandable to 1M byte), a 9-in. monitor, a

parallel port and a serial port, according to the vendor.

The system uses ET/M II, an enhanced version of Digital Research, Inc.'s CP/M Release 2.2 operating system. Word processing, spreadsheet, general ledger, accounts receivable, accounts payable and payroll with job costing applications are bundled with the system, the vendor said.

**The system costs \$1,349. ET Computer Systems, 2161 Broadway, Lemon Grove, Calif. 92045.**

## ALSPA COMPUTER, INC.

MC-4010; MC-4050; MC-4060; MC-4080

Alspa Computer, Inc. announced four desktop microcomputers that can be tied into the firm's Alspa-Net

local-area network.

The Alspa-Net units feature a Zilog, Inc. Z80A microprocessor, 64K bytes of random-access memory, two RS-232C serial ports, two parallel ports and an RS-422 network interface. Bundled software includes a spreadsheet operating system and an electronic mail package, the vendor said.

The MC-4010, with a 10M-byte hard disk drive, costs \$4,400; MC-4050, with a 20M-byte hard disk drive, sells for \$5,400; MC-4060, with a 30M-byte hard disk drive, costs \$6,400; and MC-4080, with a 50M-byte hard disk drive, costs \$7,400.

**Alspa Computer, 477 Division St., Campbell, Calif. 95008.**

APPLICATION INNOVATIONS  
Point-of-sale system

Application Innovations announced a turnkey point-of-sale system based on the IBM PCjr.

The system features a 9-in. monochrome display, 128K bytes of random-access memory, a 40-cpi. printer, 370K bytes of disk drive, point-of-sale software and a cash drawer with change holder, according to the vendor.

A user can change product descriptions and prices, the vendor said.

**The system costs \$3,250. Application Innovations, 1550 Old W. Henderson Road, Columbus, Ohio 43220.**

MORROW, INC.  
MD11 price increase

Morrow, Inc. has raised the retail price of its MD11 hard disk desktop microcomputer system from \$2,745 to \$2,900 because of what the firm said are unexpectedly high manufacturing costs.

"Manufacturing costs, particularly those associated with outside vendors, have been higher than anticipated," a spokesman said.

The MD11 is an 8-bit personal/business computer system based on Digital Research, Inc.'s CP/M operating system. Shipments began in November.

**Morrow, 800 McCormick St., San Leandro, Calif. 94577.**

PRINTERS/PLOTTERS/  
PERIPHERALSFUTURNET CORP.  
DI Plot/HP

Futurnet Corp. has announced a pen plotter interface that allows engineers to plot schematics generated on Futurnet's IBM Personal Computer-based Dash-1 schematic designer on the Hewlett-Packard Co. HP 7860, 7806 and 7470 plotters.

According to the vendor, the interface was designed for producing schematics that require hard-copy output in sizes ranging from 8½ by 11 in. to 34 by 44 in.

There is a choice of roller-ball, fiber-tip or liquid drafting pens of various colors and widths, the vendor said.

The package includes the Busch & Lomb DMP-41 plotter with pen-dial and the Dash-1 driver software, according to the vendor.

**Available now, the DI-Plot/HP is priced at \$4,995.**

**Futurnet, 21018 Osborne St., Concord Park, Calif. 91304.**

## Get big performance from your small computer for just \$2.95!

Take this 3-volume  
Programming Library  
(a \$76.65 retail value)  
for \$2.95 when you join  
the Small Computer  
Book Club.

You simply agree to buy 3 more books—or hardware discounts—over the next 12 months.

## 1. THE BASIC HANDBOOK: Encyclopedia of the BASIC Computer Language, 2nd Ed.

By David A. Lien. Details virtually every significant BASIC word used by every BASIC-speaking computer in the world. It is the most complete collection of BASIC words ever with storage programs that can be used to convert the many different dialects to their computers.

**Publisher's Price: \$19.95.**

## 2. BASIC AND THE PERSONAL COMPUTER.

By Thomas A. Dwyer and Margot Grechfield. Learn to program in BASIC within eight hours. Includes computer graphics, program development, data bases, and more. Also, many step-by-step examples of word processing, computer games, and computer simulations.

**Publisher's Price: \$16.95.**

## 3. CP/M AND THE PERSONAL COMPUTER.

By Thomas A. Dwyer and Margot Grechfield. Break CP/M into basic components for easy mastery of file, debugging, editing, information flow, and more. Includes

coverage of how to use popular commercial CP/M application programs.

**Publisher's Price: \$19.95.**

## 4. THE LITTLE BOOK OF BASIC STYLE: How to Write a Program and Read One

By John Nevison. Challenges the reader to go beyond computer literacy to fluency: teaches how to write programs of less than one page, and encourages thoughtful program organization. Covers everything from algorithms to games.

**Publisher's Price: \$4.25.**

## 5. BASIC FILE PROGRAMMING IN BASIC: A Self-Teaching Guide.

By Jeffrey Forkel and Jacob A. Brown. For both hobbyists and professionals who want to add data file programming to their computing capabilities. Includes: maintaining data files, modifying existing programs, and writing your own.

**Publisher's Price: \$13.95.**

Computerworld 2/20/84

# When Computerworld delivers the goods on manufacturing systems this March 26th, you'll definitely want to be there.

## Ad deadline is March 9th.

In response to the increasingly heavy involvement of DP/MIS people in computer-aided manufacturing (CAM) and computer-aided engineering (CAE), *Computerworld* is preparing a Special Report that focuses on CAM/CAE, manufacturing resources planning (MRP), robotics, inventory and shop floor control.

We'll also cover the effect these new technologies are having on traditional manufacturing operations. And on the delicate relationships between traditional DP departments and the factory automation specialists.

If you act before March 9th — your products or services can be represented. To reserve space in this issue, call one of the sales offices listed below or call Ed Marecki, National Sales Director at (617) 879-0700.

## MICROCOMPUTERS

## BOARD-LEVEL DEVICES

DY-4 SYSTEMS, INC.  
DSTD-187 card

Dy-4 Systems, Inc. has introduced the addition of the DSTD-187 processor card to its line of STD bus products.

The DSTD-187 is an Intel Corp. 8086-based product incorporating the Intel 80130 RMX processor, two 80233C serial channels and optional Intel 8087 math coprocessor, according to the vendor.

Each card, Inc. 230 and Intel 8086 bus architectures are supported. According to the vendor, 1M-byte memory addressing is supported.

The product costs \$654. *DY-4 Systems, Suite 505, 1475 S. Bascom Ave., Campbell, Calif. 95008.*

METRABYTE CORP.  
Model F80-12

Metabyte Corp. has announced a parallel, digital I/O interface board, Model F80-12, that plugs into the IBM Personal Computer XT.

According to the vendor, the F80-12 provides 24 translator-to-translator and diode-to-translator logic-compatible lines.

Other features include an interrupt input and external connections to the microcomputer's bus power, the vendor said.

The price is \$300 in single quantities.

*Metabyte, 254 Thoon Drive, Stoughton, Mass. 01972.*

NUMBER NINE  
COMPUTER CORP.  
Evolution graphics board

Number Nine Computer Corp. introduced its Evolution graphics board for the IBM Personal Computer.

The board uses a NEC Information Systems, Inc. 7230 16-bit graphics coprocessor, the vendor said.

A display can use two modes: pixel and plane. With pixel mode, the user can modify a single pixel across 8-bit planes of random-access memory in one read or write operation, according to the vendor.

In plane mode, the user can modify eight pixels in a 1-bit plane, the vendor said.

The board costs \$945.

*Number Nine Computer, 691 Concord Ave., Cambridge, Mass. 02138.*

HELIONETICS, INC.  
APB-3000PC series

Helionetics, Inc. has announced a series of single-board array processors that is said to increase the computational speed of an IBM Personal Computer or look-alike.

The APB-3000PC series reportedly enables the Personal Computer to perform mathematical calculations up

to 10,000 times faster than a Personal Computer not equipped with the device, according to the vendor.

It runs Fortran or Basic under IBM's PC-DOS operating system and is programmable. A high-level assembler and monitor package is also available for custom microcode development, the vendor said.

Prices start at about \$2,000 for a 16-bit math integer APB-3000PC board and

\$4,250 for a 16-bit integer or 24-bit full floating-point board, a spokesman said.

*Helionetics, 17318 Redman St., Irvine, Calif. 92714.*

AUXILIARY  
EQUIPMENTDATA DECISIONS  
Microcomputer service

Data Decisions has an-

nounced an information service for microcomputer hardware and software that reportedly was designed for corporate or institutional buyers of multiple systems.

Called Microcomputers, a key feature of the service involves the testing of major software products by the vendor's laboratory staff.

Areas covered by the service include microcomputers, software, expansion/extension cards, communications

and peripherals, accessories and support equipment, according to the vendor.

A one-year subscription to the service includes two loose-leaf volumes updated monthly, 12 supplements, 12 newsletters and unlimited free telephone consulting. Charter subscriptions are available for a limited time for \$485.

*Data Decisions, 50 Bruce Road, Cherry Hill, N.J. 08004.*

The Northern Telecom system:  
A benchmark in batch processing  
that keeps getting better.

Northern Telecom batch processing systems have proven themselves, in more than a decade of use in a variety of applications, to be among the most reliable, practical, cost-effective systems ever developed. They deliver more throughput per dollar than any computer system.

Now, as solid evidence of our commitment to batch processing, we're improving these already successful systems for even more productivity. For

instance, we're introducing a new high-speed band printer with changeable type. Operating now with IBM's SNA, we've also added new, low-cost distributed data processing capabilities for more system versatility, and to provide for future growth toward the integrated office.

# We're back

## MICROCOMPUTERS

MICROPRO  
INTERNATIONAL CORP.  
Starburst series

Micropro International Corp. has introduced a line of training tools, the Starburst series.

The on-disk interactive computer-aided instruction (CAI) materials include lessons for the firm's Wordstar (word processing) and Infostar (data base management system).

Videotape instruction is available for Wordstar and will soon be available for Infostar, Calstar (the firm's electronic spreadsheet) and Starburst (the firm's program that reportedly links the other products). The self-paced tape provides the trainee with interactive training, reinforced with graphics and animation.

Users who have Wordstar Version 3.3 for IBM's PC-DOS operating system can pur-

chase the Wordstar Quick Lesson CAI for a handling charge of \$6 each until Feb. 28. The extended lesson feature serves sessions, each approximately 90 minutes long. Each extended lesson CAI product is priced at \$79.95.

Micropro's Wordstar Videotape Training Tape, in 16-in. VHS and 1/2-in. Betamax formats, will be available in the spring for a suggested retail price of \$89.95. The 1/2-in. U-Matic format will be priced at

\$139.95, the vendor said.

Micropro International, 58 San Pablo Ave., San Rafael, Calif. 94903.

ADVANCED DATA  
SUPPORT SYSTEMS, INC.  
Advanced Data Analyzer

Advanced Data Support Systems, Inc. has announced Advanced Data Analyzer, a hardware and software enhancement that monitors RS-232 asynchronous data com-

munications.

The product tags into any line between two devices. It displays and stores data transmissions and allows the user to examine data, the vendor said. The data analyzer transmits user-defined character strings and can perform a byte/bit error rate test, according to the vendor.

The product costs \$1,095. Advanced Data Support Systems, Suite 1, 217 Mt. Vernon Ave., Bakersfield, Calif. 93307.

## MICRO SOFTWARE

COMMODITY TRADING  
SYSTEMS  
Cats

Commodity Trading Systems has announced the Cats computer-aided trading package for the IBM Personal Computer.

A vendor spokesman said Cats was designed as a tool with which commodity traders can collect real-time market data, analyze price and volume and generate a trade signal based on that information and the trader's financial position and objectives.

The spokesman said that, in addition to historical price and volume analysis, Cats also features a "what-if" simulator to determine the optimum trading parameters for each contract, an updated quote page, data base query and report generation and gross profit summary.

Cats is leased for \$49,000/year, which does not include hardware.

Commodity Trading Systems, Suite 107, 11801 Bluffwood, Houston, Texas 77052.

HUMANIC DESIGN CORP.  
MPS

Humanic Design Corp. (HDC) has introduced a human resource management package for the IBM Personal Computer XT. The Microcomputer Personnel System (MPS) was designed for organizations with 200 to 2,000 employees.

MPS reportedly supports all major human resource management functions, stores payroll information and can be linked directly to in-house or payroll services. In addition, MPS can provide complete word processing.

Continued on page 77

Time-proven performance with long-term savings.

Northern Telecom's aggressive pricing is more proof of our commitment to batch. Our discount structure offers long-term savings on multi-year leases. And at renewal time, you can save even more with discounts up to 30%.

Your processing may be remote, but Northern Telecom service is on the spot.

With service and maintenance professionals located at 157 cities nationwide, we're able to provide prompt response to your call for service. How fast? Two hours in major metropolitan areas, four hours in most other areas of the country. And our multi-year maintenance agreements guarantee continuing, low-cost operation of your Northern Telecom system.

If your system lease expires within the next six months, now is the time to find out more about batch processing from Northern Telecom.

Call our toll-free number: 800-531-3113. Or write Northern Telecom, Mail Station T-240, P.O. Box 1222, Minneapolis, Minnesota 55440. We'll show you how we can tailor a batch system to your specific needs. And save you money, too.

# FIXED PRICE COMPUTING SERVICE

## INTRODUCING SUBSCRIPTION SERVICE:

*A Cost-Effective  
Alternative to  
Traditional Remote  
Computing Services or  
In-House Processing.*

Now you can couple the benefits of a professionally managed remote computing service with the predictable cost associated with in-house processing. It's called Subscription Service, and it's available today from Martin Marietta Data Systems.

## PREDICTABLE COST

Subscription Service is designed to keep your DP operation within budget. It curbs cost overruns by delivering a block of resources at an affordable *fixed price*—

almost like the in-house machine. But, unlike the in-house machine, your service doesn't degrade at peak-use periods, just when you need it most. And, when you're out of gas, you can

upgrade easily. No lease payout. No hardware moves.

## NO MYSTERY PRICING

Subscription Service unbundles the remote computing service offering to take the guesswork out of prices. Resource capacity and support levels are clearly defined and easy to understand. You buy what you need. Nothing more—nothing less.

## MORE TIME FOR YOUR USERS

It's a fact, a professionally managed computing service offers you *freedom* from day-to-day operational problems, giving you more time to focus on solutions to user problems. And, with an inventory of packaged solutions and productivity tools at your fingertips, the time and resource requirements to create a solution are greatly reduced.

## COUPLE FREEDOM WITH AFFORDABILITY

Subscription Service is proof that you can get the best for less. All subscribers are linked to Martin Marietta's powerful host computers, providing the most up-to-date computing resources. You can depend on:

- ☐ Solid, stable, thoroughly-tested hardware, software and personnel

- ☐ Response time and throughput associated with IBM's fastest processors
- ☐ Access to hundreds of productivity tools and application systems
- ☐ Responsive technical consultants available around the clock

## DISCOVER HOW SUBSCRIPTION SERVICE CAN WORK FOR YOU

If your budget for computer operations exceeds \$20,000 per month for either remote computing service or in-house processing, then find out how much Subscription Service can save you. Or how much more service you can get for what you are currently spending. Or both! Simply return the attached coupon or call toll-free (800) 638-7080. In Maryland: (800) 492-7170.

Don't be undersold. Or sold a bundle. Get the precise level of resources you need with Martin Marietta's Subscription Service.

- ☐ Please send me your Remote Computing Services brochure.
- ☐ I'd like to have my subscription requirements stated. Have your representative call me.

## MICROCOMPUTERS

Continued from page 76  
mail list/merge and electronic spreadsheet capability.

A free-standing, menu-driven system with communications options, MFS requires a Personal Computer XT configuration of a 10MB-byte fixed disk, plus 500K-byte capacity diskette drives and 256K bytes of memory.

MFS software is priced at \$18,000 with optional rental and/or lease.  
HDC, 207 Summit Ave., Mahwah, N.J. 07430.

#### APPLIED SOFTWARE TECHNOLOGY, INC.

Applied Software Technology, Inc. has announced the Versaform Balance 2.7 for Texas Instruments, Inc.'s Professional Computer.

Balance 2.7, which runs under Microsoft, Inc.'s MS-DOS operating system, is also available for the IBM Personal Computer.

Data entered into the system creates a data base of form records. Data from the data base may be selected, sorted and written to an MS-DOS file for use by word processors, spreadsheets and other programs, the vendor said.

The suggested retail price of Versaform Balance 2.7 is \$350.

Applied Software Technology, 170 Emerson Drive, Los Gatos, Calif. 95030.

#### RADIO SHACK

Radio Shack has announced an educational software package designed to teach secondary and college students and adults the fundamentals of programming Cobol.

The package contains a comprehensive manual and a diskette with exercises that can be used with any Radio Shack TRS-80 Model II, 12 or 16 disk system with at least 64K bytes of memory.

Volume One is available for \$49.95. Class notes are priced at \$9.95 and are sold as an aid to instructors for use in the classroom.

Radio Shack, 1600 One Tondy Center, Fort Worth, Texas 76102.

#### SIGNUM MICROSYSTEMS, INC.

Signum Microsystems, Inc. has introduced Documax, an information management package for the Apple Computer, Inc. Apple II microcomputer.

Documax is a document-handling package that features word processing, electronic mail and other text files, the vendor said.

Documax runs on the Apple II, II+ or IIe with 48K bytes of memory. It also runs on the Apple III in Apple II emulation mode.

The product sells for \$175.  
Signum Microsystems, 180 Mountaintop Ave., Bloomfield, Conn. 06002.

#### IDRAWARE, INC.

Ideware, Inc. has introduced the Idea Processor, a software package for IBM Personal Computer users.

The Idea Processor combines a card-file-style, free-form file manager with word processing software and can incorporate graphics stored as file cards, the vendor said.

Minimum system requirements are

on IBM Personal Computer or compatible machine with 150K bytes of memory. A printer is optional, the vendor said.

The Idea Processor sells for \$395.  
Ideware, 226 Lafayette St., New York, N.Y. 10012.

#### NOOM TELEPHONICS, INC.

Noom Telephonics, Inc. has introduced Netmaster, a communications program for Apple Computer, Inc.'s Apple II microcomputer.

According to the vendor, Netmaster can be used with 200 bit/sec modems. The package will receive and transmit any file developed under Balance 2.3 of Apple's DOS operating system, the vendor said.

Netmaster is priced at \$75. It is

sold with Noom's Netmaster modem (including a free membership to The Source data base) for \$179, the vendor said.

Noom Telephonics, 207 South St., Boston, Mass. 02110.

#### DAYANHEIGH CORP.

Dayanheigh Corp. has introduced a feature for its Report Manager three-dimensional software, a command language called Renc. The package runs on IBM's Personal Computer.

Renc is a language that uses database commands or can capture and repeat sequences of keystrokes, the vendor said.

Minimum system requirements are 150K bytes of random-access mem-

ory and two disk drives.

The suggested list price of Report Manager is \$900.

Dayanheigh, 615 Academy Drive, Northbrook, Ill. 60062.

#### STONEWARE, INC.

Stoneware, Inc. has enhanced DB Master to include a file converter.

DB Master's file converter reads files created with Software Publishing Corp.'s FFS/Files and Victory's Vfields programs into DB Master. It can use alphanumeric, numeric or date fields, the vendor said.

The data base costs \$350 and runs on Apple Computer, Inc.'s Apple IIe. Stoneware, 50 Boulevard St., San Rafael, Calif. 94601.

## MICROCOMPUTERS

MICRO page 77SOFTWARE SYSTEMS, INC.  
Personal Computer Print Utility

Software Systems, Inc. (SSI) has announced a package that allows a report from an IBM System/34 or System/36 minicomputer to be printed on an IBM Personal Computer.

According to the vendor, the Personal Computer Print Utility converts spooled-print files on the host system to Personal Computer-formatted text files.

The utility was designed for users of SSI's 5251 Model 13 emulation and file-transfer utility to allow off-line storage and printing of spooled reports.

The product is available at a price of \$75 for the System/34 and \$60 for the System/36, including report program generator source code.

Software Systems, P.O. Box 1766, Jefferson City, Mo. 65102.

PROFESSIONAL MICROSYSTEMS, INC.  
Bisplan

Professional Microsystems, Inc. has introduced Bisplan, a software template that enables users to create a business plan and analyze alternative sales strategies under changing conditions.

According to the vendor, Bisplan can run on any system running Digital Research, Inc.'s CP/M operating system. Systems must have a minimum of 48K bytes of random-access memory.

The suggested retail price of Bisplan is \$195.

Professional Microsystems, Richardson Plains, Rt. 309 & Richardson Road, Montgomeryville, Pa. 18936.

LIBRA LABORATORIES, INC.  
Gantt-Pack Version 2

Libra Laboratories, Inc. has announced Gantt-Pack Version 2, a menu-driven project management software package for Radio Shack TRS-80 Models 1/III and 1/12 microcomputers.

According to the vendor, the product is a project control and resource management tool that enables users to store data on each project's requirements. Gantt-Pack can be used to automate drawings, create charts and sort data.

Gantt-Pack costs \$395. Gantt Systems, Libra Laboratories, 405 Main St., Monticello, N.J. 08840.

GENASTS CORP.  
Talker Version 2.0

Genasts Corp. has announced the release of Version 2.0 of its asynchronous communications package, Te-

lora, for the IBM Personal Computer, Personal Computer XT and Personal Computer-compatible computers.

Talker operates at speeds ranging from 110 to 8,000 bit/sec through any smart, acoustic or dataphone-type modem hard wired to a machine or via a network. Its internal buffering is said to allow screen scrolling of at least 250 lines of data during communications. Any additional memory can also be

used as a screen buffer, allowing scrolling of more than 250 lines.

Talker costs \$119.95, including documentation.

Genasts, Microcomputer Products Group, 11830 Parkview Drive, Rockville, Md. 20852.

ADDISON-WESLEY PUBLISHING CO.  
Micro-DOS/Finance

Prices of Micro-DOS/Fin-

ance (DOS/F), a microcomputer financial modeling software package from Addison-Wesley Publishing Co., have been reduced by 55%.

DOS/F is an integrated package that combines financial modeling, graphics and reporting. It can be purchased through dealers or Addison-Wesley at the new prices of \$795 for Apple Computer, Inc. version and \$995 for the IBM Personal Computer version, a spoken

man said.

Addison-Wesley, Reading, Mass. 01867.

HUMAN SYSTEMS DYNAMICS  
PC Statistics

Human Systems Dynamics has introduced a general statistics package for the IBM Personal Computer.

According to the vendor, PC Statistics provides a research data base. The prod-

**MICRODATA  
INTRODUCES  
THE RELATIONAL  
OFFICE.**

**IT'S WHERE  
YOU'VE ALWAYS  
WANTED  
TO WORK.**

## MICROCOMPUTERS

uct also offers the graphics options of data set plots, bar graphs, scatter plots and curve fittings, the vendor said.

System requirements are an IBM Personal Computer with 128K bytes of memory, two double-sided, double-density disk drives and Release 2.0 of IBM's PC-DOS. A printer is optional.

The price of the package is \$300.

*Shuman Systems Dynam-*

*ics, Suite 222, 2010 Nevada Blvd., Northridge, Calif. 91324.*

**L.P. SHARP ASSOCIATES, LTD.  
APL/PC**

L.P. Sharp Associates, Ltd. has introduced an implementation of the APL development language for the IBM Personal Computer.

Called APL/PC, the package is compatible with

Sharp's mainframe software products. This is accomplished by booting the microcomputer product on a System/370 emulator.

Therefore, all APL constructs available in a mainframe environment are also available in the microcomputer environment. These include all primitive functions and operators and all data types, including packages and enclosed arrays, the vendor said.

The system runs as a user program under the IBM Personal Computer operating system PC-DOS Version 1.1 or 2.0. The package includes the interpreter, the file system, the session manager, several auxiliary processors and the utility programs.

The price of APL/PC is \$275.

*L.P. Sharp Associates, Suite 1900, 2 First Canadian Place, Toronto, Ontario, Canada M5X1B2.*

# STRATEGIC SOFTWARE SYSTEMS, INC. Bottomline V

Strategic Software Systems, Inc. has introduced Bottomline V, a financial modeling, planning and forecasting package.

The product operates with spreadsheet programs, such as Lotus Development Corp.'s 1-2-3 and Visicalc's Visicalc. The package runs on the IBM Personal Computer or XT, the Xerox Corp. 850, Digital Equipment Corp.'s Rainbow and Apple Computer, Inc.'s processors. The package also runs on Microsoft, Inc.'s MS-DOS and Digital Research, Inc.'s CP/M operating systems.

The suggested retail price is \$295.

*Strategic Software Systems, Suite 200, 1809 Dove St., Newport Beach, Calif. 92660.*

# ZYLAB CORP. Zyindex

ZyLab Corp. has introduced Zyindex, an information search and retrieval package that finds information in any ASCII-based text files. The package runs on the IBM Personal Computer, Personal Computer XT and compatible systems.

According to the vendor, Zyindex stores information from documents created with a word processing package or obtained from other public data bases. Users retrieve information from their files by entering search requests on any topic.

Zyindex requires 65K bytes of memory and two disk drives.

The list price of the product is \$295.

*ZyLab, 222 E. Erie, Chicago, Ill. 60611.*

# PERSOFT, INC. Smarter 100

Persoft, Inc. has announced Smarter 100, a terminal emulation/file transfer package for the IBM Personal Computer and compatible systems.

The product is said to allow the Personal Computer to function as a Digital Equipment Corp. VT100, VT101, VT102 or VT52 CRT terminal and to transfer ASCII or binary files between the Personal Computer and a host computer system.

Smarter 100 runs under any version of IBM's PC-DOS operating system and can be installed on hard disk, the vendor said.

It requires 128K bytes of memory, can double-sided diskette drive, an asynchronous adapter and either the monochrome display or an 80-col. color monitor, according to the vendor.

It is priced at \$140.  
*Persoft, 2740 Shu Lane, Madison, Wis. 53713.*

## MICROCOMPUTERS

MICRO from page 79DATA CONSULTING GROUP  
PC Files PC Screens and Menus

Data Consulting Group has announced two utility products for the IBM Personal Computer running Microsoft, Inc.'s MS-DOS and compatible operating systems.

PC File Utilities is a series of programs designed to facilitate file management. According to the company, the programs allow the user to print, display or edit random files by entering the file name; print or display sequential files; and display data simultaneously in four formats: character, Ascii, hex and bit flag.

PC Screens and Menus is a menu and screen generator that creates basic screens for data entry. Once the screen is drawn, it can be saved in a file and accessed by any program.

The utilities cost \$50 each, require less than 64K bytes of memory, a monitor and one or two single- or double-sided disks.

Data Consulting Group, 12 Bayshore Drive, Larkspur, Calif. 94039.

## MYCROFT LABS, INC.

Mits/M8

Mycroft Labs, Inc. announced Mits/M8, a menu-driven communications program that runs under Microsoft, Inc.'s MS-DOS operating system.

Mits/M8 features user-selectable options to capture text from or send to any synchronous, Ascii, on-line system, according to the vendor. A

user can define 10 programmable macro strings which can be invoked by a function key, the vendor said.

Mits/M8 costs \$196.  
Mycroft Labs, Suite B105, 8639 N. Monroe St., Box 65, Tallahassee, Fla. 32305.

## FLASER SYSTEMS, INC.

Vdms

Flaser Systems, Inc. announced Virtual Database Access Method (Vdms), a software tool that allows IBM Personal Computers to access and store IBM mainframe data.

With Vdms, the mainframe appears as an infinite set of databases to any program running on the Personal Computer, according to the vendor. The user stores and accesses mainframe data in a format identical to that on the Personal Computer.

The system operates under IBM's TSO.

The package costs \$600 for mainframe software and \$300 for each Personal Computer attached to the mainframe.

Flaser Systems, 24 California St., San Francisco, Calif. 94111.

## DATA MANAGEMENT

ASSOCIATES, INC.

Magic

Data Management Associates, Inc. has introduced Machine Generated Integrated Code (Magic), a programming language which the company claims increases programmer productivity tenfold. The package runs on microcomputers using Digital Re-

search, Inc.'s CP/M operating system.

The language features internal data areas with variable buffers and dynamic allocation, screen formatting and editing, the ability to mix reasonable languages anywhere in Magic source code, string manipulation capability and control-conditional compilation of source code, according to the vendor.

Magic for CP/M costs \$795. It costs \$895 for microcomputers using CP/M 86 or MS-DOS, an operating system from Microsoft, Inc.

Data Management Associates, P.O. Box 4540, Wilmington, Del. 19807.

## INFORMATION BUILDERS, INC.

Focus for IBM XT/AT

Information Builders, Inc. has announced the availability of its Focus nonprocedural data base and information management package for the IBM Personal Computer XT/AT.

Focus, operating under the IBM VM/CMS environment, reportedly combines relational data base and screen management facilities with an English nonprocedural language for queries, formal reporting, graphics, statistical analysis and financial modeling.

Information Builders reports that users of the desktop XT/AT using IBM's VM operating system on mainframes can access their information centers with Focus. The users reportedly can use English commands to analyze files on their CMS installation.

Focus on the XT/AT is licensed as an add-on to a user's existing mainframe

license. The purchase price for one to eight XT/AT machines is \$8,400, and the lease price is \$875 per month.  
Information Builders, 1280 Broadway, New York, N.Y. 10001.

## COLLINS &amp; ASSOCIATES, INC.

Court File-It, Plot-It, LC Data

Collins & Associates, Inc. has introduced four business programs: Court File-It, Plot-It and LC Data.

According to the vendor, all the programs were designed to run on either the Hewlett-Packard Co. HP 86 or HP 87 microcomputers, with memory requirements ranging from 64K bytes to 160K bytes, depending on the program.

Court File-It was designed for managers to use in planning a project. It enables the user to focus attention on the plan, measure progress and take corrective action. It requires 160K bytes of memory, according to a spokesman for the vendor.

Plot-It is a data file management package with a capacity of 982 bytes of memory, according to the vendor's spokesman. Records can be sorted on any field for the whole file or selected parts of the file. In displaying or printing records, the fields can be arranged in any order, and the display can be vertical or horizontal. It requires 128K bytes of memory, the spokesman said.

Plot-It is a program for plotting single or multiple line curves and performing linear regression curve fits of curve data. The program is menu-driven. Manipulation of data can be performed, and statistical analysis

## Asian Computerworld reaches the fastest growing computer market in the world.

### Introducing

Asian Computerworld.

Asian Computerworld is Computerworld's sister publication covering the Southeast Asian marketplace. The editorial (written in English) keeps computer executives, computer users, potential users and people in the computer industry up to date.

Southeast Asia is considered the fastest growing computer market in the world with a total value of \$1.8 billion and annual growth rates for small business systems and micros over 50%. The average annual growth rate is approximately 30%.

Asian Computerworld is published in Singapore and printed twice a month on Thursdays. The total circulation is 8,000. And the geographical distribution is as follows: Hong Kong, Singapore, Philippines, Malaysia, Indonesia and Thailand.

CW International Marketing Services makes it easy for you to advertise in countries all around the computer world. For more information on Asian Computerworld, just fill out and return the coupon below.

Send no more information on:  
Asian Computerworld. Or your other publications.

## MICROCOMPUTERS

can be done to give the main, various coefficient of variation. It requires 96K bytes of memory.

LC Data is a learning curve program that provides a tool for production, marketing and general management users to make decisions on manpower, prices and materials. The program can calculate production costs or hours and then forecast future unit- and lot-production hours and costs. It requires 64K bytes of memory.

Programs are supplied on 5¼-in. floppy disks. Prices are \$175 for Cpert, \$100 for File-It, \$150 for Plot-It and \$95 for LC Data.

*C'Sides & Associates, 187 Flying Mist Isle, Foster City, Calif. 94024.*

## BUSINESS SOLUTIONS, INC.

Jack3

Business Solutions, Inc. has introduced Jack3 for the Apple Computer, Inc. Apple IIe. The Jack3 is an integrated software package that does word processing, spreadsheet analysis, charting and data base management tasks on the same screen without windows.

According to the vendor, Jack3 was originally designed for the IBM Personal Computer.

Jack3 features commands displayed on a two-line area at the top of the screen, handles multiple columns of text on the same page and can hide confidential information in the middle of the text.

All screen information, including the spreadsheet and the bar chart, is printed out on a single page the same way it appears on the screen, the vendor said.

Jack3 is priced at \$395, according to the vendor.

*Business Solutions, 60 E. Main St., Elms Park, N.Y. 11754.*

## STAR ENTERPRISES, INC.

Stardriver-I

Star Enterprises, Inc. has introduced Stardriver-I, a package that enables the Hewlett-Packard Co. HP 9000 Model 30 microcomputer to support multiple users in Basic.

According to the vendor, multiple users may interact via remote terminals for graphics as well as program development and execution.

The software is priced at \$1,045, the vendor said.

*Star Enterprises, 310 Crestwood Drive, Selma, Ala. 36701.*

## SOFTLOGIC SOLUTIONS

DoubleDOS

Softlogic Solutions has introduced DoubleDOS, an operating system enhancer that lets the IBM Personal Computer and Personal Computer XT microcomputers perform two simultaneous functions. It does not require any software modification.

According to the vendor, DoubleDOS acts as an extension to the capabilities of IBM's PC-DOS, either Release 1.1 or 2.0.

DoubleDOS can run on systems with as little as 128K bytes of memory, depending on the application, though 192K bytes of memory are recommended by the vendor. There is no need for the user to buy additional hardware, terminals or cables, the vendor claimed.

According to the vendor, DoubleDOS works by dividing a system's memory into two areas, one for each program running. The memory can be

divided in any way the user chooses.

The price of DoubleDOS is \$295, the vendor said.

*Softlogic Solutions, 530 Chestnut St., Manchester, N.H. 03101.*

## OPUS CORP.

Workstation Simulator

Opus Corp. has introduced the Workstation Simulator, which allows an IBM Personal Computer or Personal Computer XT to act as a Hewlett-Packard Co. HP 250 workstation.

According to the vendor, HP 250 software features such as screen-labeled soft keys, forms and video enhancements are simulated. Several additional features extend the emulator's applicability, including an Asci-Ansi mode for autodial modem control, data logging to disk files and

local printer support.

The product costs \$600, according to the vendor.

*Opus, 30251 Century Blvd., Germantown, Md. 20874.*

## BAILEY &amp; ROSE LTD.

Compact

Bailey & Rose Ltd. has added a prototyping tool for the IBM Personal Computer to the Acq/1 family of productivity software.

Called Compact, the product was designed to facilitate the development of prototypes and allow the user to test design concepts and specifications, as well as demonstrate working models. It includes screen development functions and logic plan facilities.

Compact requires an IBM Personal

Computer or compatible system with 256K bytes of memory, two double-sided, double-density diskettes or one hard disk, IBM's PC-DOS operating system, Release 1.1 or 2.0 and color graphics board or monochrome adapter. It costs \$1,500.

*Bailey & Rose, 480-1088 Dwyer St., Vancouver, B.C., Canada V5E 1M7.*

## NEW MEDIA GRAPHICS CORP.

Graphover Rating

New Media Graphics Corp. has offered a free listing of specific features its Graphover 9000 software driver that runs under IBM's PC-DOS operating system.

The graphics driver allows color graphics to be controlled by the IBM Personal Computer, and the graphics

**NCR**

From the cutting edge  
of NCR software engineering comes  
NCR/SNA Systems Network Architecture

If you are a computer manufacturer, or an OEM, there are two ways that you can implement SNA or S/SE on your system:

- Do it yourself.
- Call NCR.

NCR systems engineers have developed suitable communication products which can be easily implemented on a variety of processors and operating systems. These products allow for SNA communications. SNA network management and communication using X.25. Many of the products are immediately available, and could be ported onto most processors with minimum effort. And that's not all. NCR/SNA is backed by the

resources and experience of an international company with a long background in data processing, and with the engineering technology that will keep it among the leaders. In 1954, NCR is 100 years young. If you are going to make a major investment in a strategic product, you'll want the innovative technology and service for which NCR has long been famous.

If you are a computer manufacturer or an OEM, we would like more information contact:

**NCR Corporation**  
11010 Torreyman Road  
San Diego, California 92121  
Phone (619) 482-1029

**TELETYPE  
CORPORATION.  
WHAT'S NOW  
IN FRONT OF OUR  
NAME IS ALSO  
BEHIND US.**

**AT&T**

Teletype Corporation

**A**t Teletype Corporation, we've changed our logo. But as a part of the AT&T family, our commitment to supplying you with the latest in communications products and services hasn't changed.

With our own sales and marketing force, service organization, manufacturing facilities and distribution network, we're in an ideal position to meet all of your needs. And with the ingenuity of our expanding R&D, we're developing the kinds of terminals and systems the Information Age demands.

Today, our full line of printers and CRTs fit a wide variety of applications—from simple message transmission to sophisticated programming. Each and every terminal boasts user-friendly features that exemplify traditional Teletype Corporation quality.

We're also actively branching out into new areas such as intelligent terminals. Our 5620 intelligent graphics terminal, for example, is indicative of the kind of terminals you'll be working with in the future. It's a UNIX\* based CRT that can perform up to six functions simultaneously.

But while we're exploring new areas, we're also improving the products that have earned Teletype Corporation a strong reputation for value. Take our 5540 line of terminals. It represents our third generation of 3270-compatible devices. And we're continually adding to it, developing new displays, printers, keyboards and controllers to enhance the cost-effectiveness of your system.

Now that you've seen our new logo, it's time you took a closer look at what we can do for you. To find out more about our products and services, write Teletype Corporation, Dept. 3223-F, 5555 Touhy Ave., Skokie, IL 60077. Or call 1-800-323-1229, ext. 932.

\*UNIX is a trademark of Bell Telephone Laboratories, Inc.

## MICROCOMPUTERS

Continued from page 81  
can be overlaid on video coming from videotext, videotape or TV camera. The combined pictures can be displayed on any monitor or recorded on videotape, the vendor said.

New Media Graphics, 579 Cambridge St., Burlington, Mass. 01803.

#### VIKING ASSOCIATES Profile/Nativelux

Viking Associates has introduced Profile and Nativelux communications packages for users of Apple Computer, Inc. Apple II+ and IIe microcomputers.

Profile allows the user to transfer files between micros at speeds up to 30,400 bit/sec, or approximately 90 pages/min, the vendor said.

The Nativelux 3270 system pro-

vides an emulation of a remote IBM 3270 display terminal system with the Apple II+ or IIe. The package operates at line speeds of 1,500 to 9,500 bit/sec in a half-duplex mode over full-duplex facilities, the vendor said.

The Profile package is priced at \$250. The Nativelux package is priced at \$445.

Viking Associates, P.O. Box 363, Colorado Springs, Colo. 80901.

#### ADDISON-WESLEY PUBLISHING CO. Micro-DSS/Analyse

Addison-Wesley Publishing Co. recently announced an analytical software package for the IBM Personal Computer that is said to bring decision support analysis to managers' desks.

Micro-DSS/Analyse reportedly provides statistics, report writing, graphics, data base management facilities and the ability to perform ad hoc analysis.

The package costs \$485.

Addison-Wesley Publishing, Reading, Mass. 01867.

#### DUNBAR-RIDGE CORP. Filedriver

Dunbar-Ridge Corp. has introduced Filedriver, an integrated set of utilities for Digital Research, Inc.'s CP/M or MP/M and Msys Corp.'s TurboDOS operating systems.

Filedriver operates on any file and accesses files independently of user area or attribute-flag status, according to the vendor. Utilities can be ac-

cessed in five ways: file selection, file processing, user interaction, file protection and on-line display.

Filedriver costs \$65.

Dunbar-Ridge, 108 Sterling Court, Spacet, N.Y. 11791.

#### AMERICAN PLANNING CORP. Megabasic

American Planning Corp. announced Megabasic, a programming language that reportedly can address 1M bytes of random-access memory.

Megabasic features an execution speed reportedly six times faster than Basic from Microsoft, Inc. Other features include variable names, which can be 355 characters long, and a trace-and-edit capability, according to the vendor.

Megabasic runs under MS-DOS from Microsoft and the CP/M 86 operating system from Digital Research, Inc. The programming language costs \$400.

American Planning, Suite 423, 1440 Duke St., Alexandria, Va. 22304.

#### DCD CO.

Job Shop Control version

DCD Co. announced an IBM Personal Computer XT-compatible version of its Job Shop Control package.

The package includes job costing, payroll, accounts payable, accounts receivable and general ledger applications, the vendor said. The job costing module features job status reports, daily production figures, monthly statistics, efficiency figures, job costs and due dates for jobs.

The job-costing application costs \$3,500; the other four packages cost \$900 each. Together, the five applications cost \$6,000.

DCD, 1801 W. River Road N., Minneapolis, Minn. 55411.

#### BELLISOFF, INC. Entry System for Programs

Bellisoff, Inc. has introduced a language-oriented editor for computer-aided programming on IBM's Personal Computer using the Pascal and C languages.

Entry System for Programs is said to check programs for syntax errors and automatically format code for readability, saving compiling and debugging time.

ES/P is priced at \$249 for Pascal on a single-machine license and \$349 for Pascal and C.

Bellisoff, Suite 150, 8590 Northrup Way, Bellevue, Wash. 98004.

#### REMBOI COMPUTER SERVICES, INC.

Screen.cob Version 1.0

Remboi Computer Services, Inc. has announced Version 2.0 of its Screen.cob Cobol screen code generator for use with Microsoft, Inc.'s IBM Personal Computer Cobol package.

According to the vendor, Screen.cob is a utility program that writes Cobol code for screen set-up in a standard Ascl file text editor.

Screen.cob can also overlay multiple screens and set up a series of screens at one time. The package reportedly will operate on any microcomputer that can run Microsoft's IBM Personal Computer Cobol package. Version 2.0 of Screen.cob is priced at \$49.95.

Remboi Computer Services, 115 Brighton Ave., Boston, Mass. 02134.

## MICROCOMPUTERS

**STOK SOFTWARE, INC.**  
Backup enhancements

Stok Software, Inc. has announced enhancements to Backrest, its hard disk backup program.

According to the vendor, Backrest runs on Maysa Corp.'s Turbodo, Microsoft, Inc.'s MS-DOS, IBM's PC-DOS and a variety of local-area networks.

Enhancements include the ability to select predefined backup routines, password-protected file backup and restore, repeated backup to the same hard or floppy disk, improved error handling, optional use of screen color attributes and a German language version with European date format.

Backrest is also available for Digital Research, Inc.'s CP/M, MP/M, CP/Ne, CP/M 86, MP/M 86 and concurrent CP/M at a retail price of \$180.

Stok Software, 17 W. 17th St., New York, N.Y. 10011.

**LOGICAL SYSTEMS, INC.**  
LS/Host/Term

Logical Systems, Inc. has introduced LS/Host/Term, a host-terminal package developed for use with the Radio Shack TRS-80 operating system on the TRS-80 Model 4 microcomputer.

The package includes a host system that works in conjunction with the terminal portion of the package. The terminal is designed to emulate an Applied Digital Data Systems, Inc. Add-5 terminal.

LS/Host/Term is available for \$190.

Logical Systems, P.O. Box 23954, 5970 N. 55th St., Milwaukee, Wis. 53223.

**COMPUTER TECHNOLOGY GROUP**  
Unix courses price changes

Computer Technology Group has changed the rental rates for its Unix video tape training courses. Three training courses are available: Unix Overview consists of six modules and costs \$2,100, Unix Fundamentals with 15 modules sells for \$5,250 and C Language consists of 16 modules and sells for \$5,600.

For the first month, the rental prices for any module have been lowered to 20% of purchase price, the vendor said.

In the second month, the rental cost has been lowered to 15% of purchase price. After the second month, rental prices become 10% of the purchase price, according to Computer Technology.

Computer Technology Group, 310 S. Michigan Ave., Chicago, Ill. 60604.

**AGS COMPUTERS, INC.**  
Smart-C

AGS Computers, Inc. has announced Smart-C, a software development tool for any mainframe, mini or microprocessor that supports a C compiler.

According to the vendor, Smart-C is a full screen intelligent editor for constructing C programs. As a structural editor, Smart-C is said to encourage standardization of software layout and style.

The initial version of Smart-C for the IBM Personal Computer will be available in the second quarter of 1984. Pricing will be between \$400 and \$500.

AGS Computers, 1135 Spruce Drive, Mountainside, N.J. 07092.

**ELITE SOFTWARE**  
Elite-File

Elite Software has introduced a relational data base manager for the Radio Shack Color Computer.

According to the vendor, Elite-File is an ad-machine language that allows users to define their own data record structures. It was written by the author of Elite-Calc, Bruce Cook, and uses the same 68008 microprocessor.

The product is compatible with Elite-Calc and Elite-Term.

The program is available on disk and requires 25K bytes of memory and Disk Basic.

The price is \$74.50, plus shipping and handling charges.

Elite Software, Box 11294, Pittsburgh, Pa. 15233.

**MICROSOFT, INC.**  
Word merge facility

Microsoft, Inc. has introduced a form letter (merge) facility for its Word word processing software.

According to the vendor, the facility will allow users to produce custom form letters by merging variable information with a standard letter. It is also possible to merge a primary document with data stored in another document or Accl file, the vendor said.

An expanded printer driver format offers the facility to support all standard printers, including most dot matrix and daisy-wheel units.

Available the first quarter of this year, the product sells for \$25.

Microsoft, 10700 Northway Way, Bellevue, Wash. 98004.

**A.B. DICK CO.**  
Supercalc

A.B. Dick Co. has announced Supercalc, a financial spreadsheet software package for use with its Magna III and Magnewriter information processing systems. The system uses Digital Research, Inc.'s CP/M operating system.

According to A.B. Dick, Supercalc is an enhanced version of Supercalc. New features include a sort facility to rearrange columns and rows, bar-line construction of spreadsheets, enhanced display and print formatting.

Supercalc costs \$195. An upgrade to Supercalc costs \$125.

A.B. Dick Co., 5700 W. Tusky Ave., Chicago, Ill. 60644.

See M2000 page 86

**Your Data Center Doesn't Have to Look Like This!****Use Johnson Systems' APEX!**

**APEX—Automated Production Control System.** APEX is the most comprehensive production planning and workload management system available in today's market. APEX eliminates card handling and reruns due to setup errors, assures correct job sequencing, allows viewing of output before it's printed, and provides immediate up-to-date status of all production processing. Some of APEX's powerful features include:

- Flexible Scheduling • Interactive Job Setup • Automatic Job Submission • Automated Restart/Recovery • Critical Output Review • Management Reporting • Single Source of Production Information for IBM 370, 303X, 43XX and all PCMs, MVS, VSI Environments.

If you're looking for ways to avoid the turmoil in production processing, then put APEX to work for you.

## MICROCOMPUTERS

MICRO from page 85HUNTER & BRADY, INC.  
VRTX C Interface Library

Hunter & Brady, Inc. has introduced the Lattice C Compiler for its VRTX C Interface Library for IBM's Personal Computer.

The VRTX C Interface Library reportedly enables programmers using the vendor's VRTX/86 real-time operating kernel to use the compiler to write real-time applications code in C language for any Intel Corp. 8086-based system.

The VRTX C Interface Library is available on 5¼-in. floppy diskettes with documentation for \$750.

*Hunter & Brady, 445 Sherman Ave., Palo Alto, Calif. 94304.*

OMNI COMPUTER  
SYSTEMS, INC.  
Flash-Com

Omni Computer Systems, Inc. has introduced an integrated electronic mail package that operates on the IBM Personal Computer and PCjr, Apple Computer, Inc.'s Apple II, Radio Shack and other microcomputers.

Flash-Com is said to enable users to implement the U.S. Postal Service's electronic computer-originated mail (Ecom) service.

Features include a mailing list management capability. It also features an Ecom accounting and billing analysis capability, menu screen help messages and a glossary of Ecom.

The product can interface with software packages, such as Micropro International Corp.'s Wordstar; Professional Software, Inc.'s Wordplus-PC; Lifesoft Software, Inc.'s Volkswriter; Perfect Software, Inc.'s Perfect Writer; Ashton-Tate's dBase II; and Lotus Development Corp.'s 1-2-3.

The product retails for \$290.

*Omni Computer Systems, P.O. Box 168, Chestnut Hill, Mass. 02167.*

MASTER COMPUTER  
SYSTEMS, INC.  
Formix

Master Computer Systems, Inc. has announced a software development tool for the IBM Personal Computer and compatible systems.

According to the vendor, Formix consists of two related components operating under IBM's PC-DOS and Microsoft, Inc.'s MS-DOS operating systems. One is a routine executive to manage data traffic between the end user and the application program. The other is a set of interactive screen-forms development tools.

Minimum hardware requirements are 64K bytes of main memory and one disk drive.

The product is available now for a single-license price of \$495 for the Basic version. Compiler language interfaces are available for a one-time charge of \$495.

*Master Computer Systems, 9531 W. 78th St., Eden Prairie, Minn. 55544.*

MARK OF THE UNICORN, INC.  
PCjr compatibility

Mark of the Unicorn, Inc. recently announced that its entire software product line will now operate on the IBM PCjr.

The vendor's products are The

Finalword, a word processing package; PC/Intercomm, a communications program; and Mince, a screen-oriented text editor.

The programs for the PCjr require 128K bytes of memory and one disk drive, according to the vendor.

Pricing for the PCjr programs are: The Finalword, \$300; PC/Intercomm, \$90; and Mince, \$175, the vendor said.

*Mark of the Unicorn, 223 Third St., Cambridge, Mass. 02148.*

DATAMENSION CORP.  
Exec on Report Manager

Datamension Corp. has announced the addition of a built-in command language to its Report Manager three-dimensional spreadsheet package for the IBM Personal Computer.

Dubbed Exec, according to a vendor spokesman, the command language uses Basic-like commands and can capture and repeat sequences of keystrokes. Thirteen of Report Manager's built-in features are pre-programmed Exec functions. These front-end applications involve loan payments, future and present value, effective interest, amortization and linear regression, the firm said.

In addition to the Exec functions, the package offers more than 60 pre-programmed functions including logarithms, trigonometric functions, inverse trigonometric functions, exponents, square roots and standard deviation, according to the vendor.

The Report Manager package with the Exec command language is priced at \$309 for the IBM Personal Com-

puter with 128K-bytes random-access memory and dual disk drives, the firm said.

*Datamension, 615 Academy Drive, Northbrook, Ill. 60062.*

ASSOCIATED TECHNOLOGY CO.  
Software Resources

Associated Technology Co. has introduced Software Resources, an artificial intelligence program for the IBM Personal Computer.

The program allows the user to perform "what-if" analysis to determine the effects of various schedules, staffs, programs, documentation, coding techniques and testing conditions, the vendor said.

The program costs \$30.  
*Associated Technology, Rt. 2, Box 448, Still Springs, Tenn. 37390.*

## MICROCOMPUTERS

**MARTIN MARIETTA DATA SYSTEMS, INC.**  
Wells

Martin Marietta Data Systems, Inc. has announced a word processing package for IBM microcomputers.

Writit is a private-label version of Software Systems, Inc.'s Multimate package, Martin Marietta said.

Writit reportedly provides keyboard procedures for insertions, deletions, cursor movement and block manipulation.

The package reportedly allows the user to type Ascii characters into documents for special printer commands and features a 90,000-word spelling checker.

Writit costs \$600.  
Martin Marietta Data Systems,  
P.O. Box 8392, Princeton, N.J. 08540.

**STRATEGIC SOFTWARE SYSTEMS, INC.**  
Bottomline-V

Strategic Software Systems, Inc. has announced a corporate financial planning applications system for a variety of microcomputers.

Bottomline-V reportedly allows the user to input basic data variables into a 12-month budget. It then produces five-year pro forma profits and loss, balance sheets, changes in financial position and financial ratio analysis.

The system was designed to run on the IBM Personal Computer and Personal Computer XT, Digital Equipment Corp.'s Rainbow and Kaypro Corp., Apple Computer, Inc. and other microcomputers using Microsoft, Inc.'s MS-DOS and Digital Research,

Inc.'s CP/M operating systems.

The suggested retail price is \$295.  
Strategic Software Systems, Suite 300, 1300 Dove St., Newport Beach, Calif. 92660.

**HEWLETT-PACKARD CO.**  
PFS Heavy; Personal Business Calculator

Hewlett-Packard Co. has announced that the Personal Filing System (PFS) software library from Software Publishing Corp. and HP's Personal Business Calculator package will be added to the software library for the HP 150 touchscreen microcomputer.

The PFS software family includes PFS:File, PFS:Report, PFS:Write and PFS:Graph. PFS:File and PFS:Report will be available for the HP 150 in the

first quarter of 1984, while PFS:Write and PFS:Graph will be available in the second quarter.

The Personal Business Calculator is said to provide the functions of an HP-15C calculator on the HP 150. Users can touch the numbers and functions on a screen that resembles the HP-15C to make calculations. The PFS library for the HP 150 is priced at \$265. The Personal Business Calculator package is priced at \$75 and is available immediately.

HP, 3000 Hanover St., Palo Alto, Calif. 94304.

**INSOURCE CORP.**

Personal Terminal Emulation Software

Insource Corp. has introduced its videotex family of Personal Terminal Emulator communication software for the IBM Personal Computer, Apple Computer, Inc. micros and Commodore Business Machines, Inc. Commodore 64.

According to the vendor, the full-color videotex software features an automatic dialing technique and a stored account number and password that allows for simplified login at 300 or 1,200 bit/sec to Insource or any other videotex system operator using Tritel.

The videotex software sells for \$199.

Insource, 110 Heritage Sq., 4825 LBJ Freeway, Dallas, Texas 75239.

**IDEAWARE, INC.**  
Grafix Idea

Ideaware, Inc. has introduced the Grafix Idea, a system of three software packages that allows business users to use IBM Personal Computers and compatible microcomputers to act as slide or overhead projectors.

According to the vendor, the slide shows can contain not only graphics images, but also images of text screens such as spreadsheets.

In addition to labeling and titling capabilities, the sketch pad can draw illustrations and flowcharts, with numerous choices of background color, text size and orientation on the screen.

The suggested retail price for the package is \$79.95.

Ideaware, Suite 718, 225 Lafayette St., New York, N.Y. 10012.

**TERRAPIN, INC.**  
Logo Version 2.0

Terrapin, Inc. has introduced Version 2.0 of its Logo language for the Apple Computer, Inc. Apple II, II+ and IIc.

Enhancements over the current Version 1.3 include improved "garbage collection" capabilities, support for all four cursor keys on the IIc and the ability to read program files created under Logo.

Terrapin has also announced enhanced documentation with a "Words and Lists" chapter in the Logo manual, including recursion, interactive graphics, quizzes, word games and artificial intelligence programming.

The price for the Logo package is \$149.95. The "Words and Lists" chapter is priced at \$12.50.

Owners of Version 1.3 may upgrade to Version 2.0 for \$20 and obtain the "Words and Lists" chapter for \$6, the vendor said.

Terrapin, 580 Green St., Cambridge, Mass. 02139.

## MICROCOMPUTERS

## MICRO from page 87

OPUS CORP.  
Writes

Opus Corp. has introduced a workstation emulator that allows an IBM Personal Computer or Personal Computer XT to act as a Hewlett-Packard Co. HP 350.

The W3250 features screen-labeled soft keys and emulation of HP forms and video enhancements. Also included is an Ascii and Ascii mode for autodial modem control, local printer support and logging and sending data to disk files.

The single-quantity price of the W3250 is \$500.

Opus, 20851 Century Blvd., Germantown, Md. 20874.

COMPUVIEW PRODUCTS, INC.  
Ygraph

Compuview Products, Inc. has introduced Ygraph, a package that is designed for industrial and engineering sites as well as for computer-aided design and manufacturing installations.

According to the vendor, Ygraph emulates a Tektronix, Inc. 4010 graphics display terminal.

It supports the Zenith Data Systems Corp. Z100 and Victor Technologies, Inc. Victor 9000 microcomputers, the vendor said.

The Ygraph disk and manual are priced at \$120, according to the vendor.

Compuview Products, Suite 300, 1965 Pauline Blvd., Ann Arbor, Mich. 48105.

ASSOCIATED TECHNOLOGY,  
INC.  
Software Resources

Associated Technology, Inc. has introduced Software Resources, a package that computes optimum resource levels for development projects on IBM Personal Computers or compatible microcomputers.

According to the vendor, the software manager can perform "what-if" studies to determine varying schedule lengths, staff levels, peak staffing, program size, documentation, coding environments, testing environments and 12 other development parameters.

The tool can provide project optimization for software projects requiring 10 to 8,000 man-months of effort, the company said.

The system is described in a user manual that costs \$30. The program and manual are available for \$175.

Associated Technology, Bt. 2, Box 448, Bethel Springs, Tenn. 37330.

MICROTEC RESEARCH, INC.  
Paragon enhancements

Microtec Research, Inc. has announced that its line of Paragon cross-assembler systems for microprocessor developers is now available for use on the IBM Personal Computer.

According to the vendor, each assembler includes a library and download utilities. It contains a macro facility, conditional assembly options, list-control operators and cross-reference listing.

Assembler systems are available for most 8-bit and 16-bit microprocessors.

The products require IBM's PC-DOS or Microsoft, Inc.'s MS-DOS Release 1.1 or 2.0 with 128K bytes of random-access memory.

Individual CPU license prices are \$400 for 8-bit processors and \$600 for 16-bit processors.

Microtec Research, No. 525, 505 W. Olton, Sunnyvale, Calif. 94088.

MONUMENT COMPUTER  
SERVICE  
Report Writer Jr.

Monument Computer Service has introduced Report Writer Jr., a word processing package for the IBM PCjr.

According to the vendor, the program was designed for those who wish to use a PCjr away from the office and later transfer the data directly to an IBM Personal Computer. The program is compatible with many word processor programs and can be used with standard IBM PC-DOS-oriented spelling check programs, the company said.

The Report Writer Jr. requires an IBM PCjr with 128K bytes of memory and a single disk drive. Both IBM graphics and thermal printers can be used with the system, but are not required.

The price of Report Writer Jr. is \$80.

Monument Computer Service, P.O. Box 603, Joshua Tree, Calif. 92552.

SOFTWARE SOLUTIONS, INC.  
Database Version 2

Software Solutions, Inc. has introduced Version 2 of its Database relational data base management system for the IBM Personal Computer using IBM's PC-DOS Release 2.0 operating system.

According to the vendor, the product can be menu-driven for novices or worked in the program's expert mode.

It allows the user to obtain information from a large number of files and derive data fields based on information in other fields. It can be used to interpret and manipulate large data bases, the company said.

The product was originally designed for use with Microsoft, Inc.'s MS-DOS Release 2.0 operating system and is also available for Digital Equipment Corp.'s Rainbow, Wang Laboratories, Inc.'s Professional and Texas Instruments, Inc.'s Professional microcomputers. The package costs \$585, the vendor said.

Software Solutions, 305 Etc Drive, Milford, Conn. 06460.

# SALVO Shatters The Information Barrier!

At last. Create your own applications in a fraction of the time compared to BASIC, COBOL or any data base language. You know exactly what you want. Now, let your personal computer generate that information by using SALVO, the fourth generation information manager from Software Automation, Inc. It's Better. Easier. And Easier to use.

**Natural Language Interprets Unique to SALVO,** this allows you to enter the following type command, "List my customers and their orders." Watch as SALVO generates the application. It truly shatters the information barrier. In minutes you get what you want, the way you want it. Inventory, Accounting, Mailing Lists, Sales Reports and more.

**Fourth Generation Language.** SALVO is a powerful nonprogrammer's language combined with a true relational DBMS. This method increases your productivity 10 to 20 times normal! People in all

professions can benefit from SALVO. Regardless of their level of expertise.

**Applications Development Package.** SALVO is a complete tool for information management. Develop your own applications. Maintain your data base.

Retrieve information using natural language. All of these functions can be performed by nonprogrammers.

SALVO is also a complete application generator for advanced users and professional programmers. SALVO's secret is simple. Technological innovations including artificial intelligence (expert systems, natural language processors) combined with relational data structures.

SALVO runs on most personal computers. Compatible with MS-DOS, PC-DOS and CP/M. SALVO requires only 64K memory. SALVO is available at your local computer store or you may contact us for information on how to get your own personal preview copy.

**Software Automation, Inc.**

44333 Preston Road, Dallas, Texas 75234

## MICROCOMPUTERS

## WINDOW from page 69

while a data base sort is completed."

The number of windows offered by various packages typically runs from four to seven. But how many can the user use at one time?

"Most of our users monitor two or three windows concurrently," Gysin said.

"We found that a person has trouble monitoring more than two or three functions," said Joseph Brophy, senior vice-president of data processing at Travelers Insurance Co. in Hartford, Conn.

Users who try to monitor six or seven windows often find their productivity deteriorating rather than improving. "There has to be a point where too many windows detracts from its usefulness," Gysin said.

While it is fairly easy to share data among windowed microcomputer programs, when mainframe data is incorporated into the windowing process, the task becomes more complicated. Only one of the current windowing software offerings, the one used in IBM's 3270 Personal Computer, offers windows that directly access mainframe data.

"With the 3270 Personal Computer, a user can access mainframe data, but it is not easy to use that data with Lotus Development Corp.'s Lotus 1-2-3 or other microcomputer applications," said Ron Goldfarb, manager for office automation at Pratt & Whitney Aircraft Co., based in Hartford. A complicated cut-and-paste procedure is needed to use mainframe data with a microcomputer application, he added.

"While these products are designed for professional managers, I am not sure they spend enough time with a personal computer to benefit from windowing capabilities," Antonella said.

Managers may not like other windowing features. Many windowing applications use icons to represent functions. For example, a picture of a notepad might be used to represent a buffer. "Icons are useful for some users," Gysin said. "Other users may find them insulting."

"Windowing will prove to be viable for some applications," he said. "Currently, it is the focus of almost every manufacturer's and independent software vendor's development. As other technologies mature, this trend will taper off, but windowing will not disappear."

## PIRACY from page 69

of software for microcomputers. Some questions, such as whether software can be rented or loaned (in the case of libraries) will probably have to be settled in court unless Congress is willing to bite the bullet and come up with a legislative solution.

In order to inhibit unauthorized copying, software houses are using various techniques to copy-protect their programs. This approach to the problem is particularly annoying when attempting to produce an integrated set of software in an organizational environment. It obviously becomes difficult, or impossible, to integrate various programs with times or windowing systems. This problem is subject to market pressures, however. If consumers, whether individual or corporate, will refrain, as a matter of policy, from buying copy-protected software, software houses will soon see the error of their ways.

After all is said and done, software piracy may not be as significant as some software houses would lead us to believe. It is a problem because of the moral and ethical implications involved (although these are neither neat nor clean). But in attempting to deal with the issue, we should beware of oversimplifying the problem and dealing with it in inappropriate ways.

Finally, software houses must meet the challenge of the software needs of large organizations. Such organizations are often willing to pay a substantial fee for a site license if one is available. And quantity or educational discounts probably do not serve the same purpose as site licenses. When dealing with large organizations, software houses must come up with creative marketing techniques. The alternative is for those organizations, as policy, to buy only software from manufacturers which have such policies, or in the worst case, for individuals within such organizations to obtain unauthorized copies of the software in the mistaken belief that they are saving the organization money.

## MICRO from page 65

## INTEL CORP.

K8086

Intel Corp. has announced a general-purpose operating system kernel for its supermicrocomputer, the IAPX 86.

Dubbed the K286, the kernel reportedly gives operating system designers an interface to all the architectural features of the IAPX 86, such as multitasking capabilities, memory management and protection and 1G bytes of virtual memory.

The K286 was reportedly designed for real-time industrial automation systems, communications systems such as automated private branch exchanges and business systems.

The product will be ready for release in July. It costs \$27,000 for a one-time license fee, including one year of factory support.

# COMPUTER INDUSTRY

## Lotus: Expected to hit No. 2 spot

### OUTSIDE LINKS

PETER BARTOLUK

With the scheduled announcement last week of the successor to 1-2-3, Lotus Development Corp. has enhanced its formidable market position and is projected to ride success to No. Two on the ladder of top software companies. That's No. Two among all software companies, not just vendors of micro products.

The investment firm of I.F. Rothschild, Unterberg, Towbin recently predicted that Lotus in 1984 will bring in revenues of \$165.7 million, topping Outpost Software, Inc. and Microsoft, Inc. and coming up just short of Management Science America, Inc.

Without a doubt, Lotus is the prime example of how the marketplace establishes a standard and the potential riches that can come to those who successfully ride the dynamics of the exploding microcomputer market.

The company raised \$1 million in financing in early 1983 and introduced its product in October of the same year, actually shipping the product in January of last year. Less than two weeks ago, Lotus released its annual report showing profits of \$14.3 million on revenues of \$65 million.

### Keys to success

The keys to success were a solid, state-of-the-art package besting anything then in the field, reliability, easy marketing, timely delivery and solid management.

With IBM expected to ship in excess of two million micros in 1984, and IBM-compatible adding another solid contribution, plus the potential of Apple Computer, Inc.'s Macintosh, Lotus is in fine shape and serves as a mentor to many other would-be overnight success stories.

There will be problems, however, for the new entrepreneur.

Foremost, where Lotus established a standard by shipping 90,000 packages in

See LOTUS page 98

## Bank software firms see red Data base task too complex?

By Paul Kammann  
CW Staff

For some application software developers, the road leading to the kingdom of on-line, integrated, central data base systems is scarred with huge potholes.

One case in point is Anacom, Inc., the Indianapolis-based company that is developing the Continuous Integrated System (CIS), an on-line, data base system for banks. The month of January represented the company's high and low points: in the space of that month, it delivered both a pilot version of CIS to the Provident National Bank in Philadelphia and defaulted on a \$45 million lending agreement with five banks.

The default was attributed to CIS cost overruns and missed deadlines by Anacom, which expects to report quarterly losses through the first nine months of 1984. Provident National Bank officials refuse to comment on the pilot project.

But Anacom's problems are hardly unique. Other vendors have also missed delivery dates, raised prices and rewritten specs during the development of their data

base systems.

Insurance Service of America, Inc. (ISA), for example, attempted to develop an on-line data base system for commercial insurance policies. After cost overruns and missed deadlines and before the project's completion, the system was sold to Advanced Technology, Inc., a division of Maryland Casualty Co.

A practice of the '70s

The desire for large on-line data base systems emerged in the mid-1970s. The systems promised to make complete, up-to-the-minute customer information instantly available. The customer wants one statement with checking, Visa and mortgage information," said William Conklin, an independent consultant in Boston.

Major data processing shops, among them those in financial institutions, began looking at these systems. "A company must develop this type of system to keep pace with its competitors," said Ronald G. Ross, editor of "Data Base News," a Marblehead, Mass., publication. "Any code

## Six indicted in alleged Apple scam

By Patricia Neale  
CW Staff

PHILADELPHIA — A federal grand jury here recently returned two separate indictments against six individuals and five companies, charging them with criminal conspiracy and smuggling of computer parts into the U.S. from Taiwan. Those parts are alleged to be counterfeit Apple Computer, Inc. Apple II components.

Information from the year-long Philadelphia investigation was funneled through U.S. Customs' Operation Tripwire, resulting in seizures of smuggled, allegedly counterfeit Apple computers in New England, San Francisco and Los Angeles, according to David E. Warren, special agent-in-charge of U.S. Customs Service here.

Operation Tripwire seeks to stop the importation of foreign-manufactured goods

that infringe upon U.S. copyrights and trademarks. Warren explained that Customs believes there is a link between these operations, and that it is possible several of the six indicted here may be "ling leaders."

The indictments marked "the first time a case has been brought for a customs violation [smuggling] in connection with the importation of computers that are copies of computers manufactured in the U.S.," according to the U.S. District Attorney's office here. (Although U.S. Customs officials raided three California companies last month, seizing 1,000 Apple II look-alikes, no charges have been filed as yet.)

Although "there can be no doubt" that the Philadelphia defendants were importing counterfeit Apple II components, the U.S. District Attorney's office here does

# MSA division to distribute micro software

By Jeffrey Buehler  
San Francisco Chronicle

LOS ANGELES — Management Science America, Inc. (MSA) has opened an additional sales division in a move designed to aid information systems directors in stemming the spread of incompatible microcomputer programs within large corporations.

MSA's Micro Distribution Division (MDD) will serve as an additional sales arm both for the company's own Peachtree Software, Inc. subsidiary and for many rival publishers of microcomputer applications as well, the company said.

MDD, headquartered here, will evaluate a host of programs representing each of the major generic categories of commercial personal computer applications — spreadsheets, word processing, graphics, communications, accounting, data base management, project scheduling and windowing. The ultimate aim of the exercise is to identify the top three or four big-business-oriented packages in each category, according to the company's senior vice-president, Howard Smith Jr.

Although at least a few of the chosen applications will undoubtedly bear Peachtree's label, the majority

will be supplied by other vendors, Smith said. All the packages, however, will be required to run on IBM or IBM-compatible personal computers.

Once a particular product has won MSA's final approval, MDD will buy and warehouse multiple copies of the program. Through its own independent sales staff, the division will then approach large corporations throughout the U.S. offer to analyze their total systems environments and supply the right combination of micro software packages to meet their individual needs.

To take advantage of MDD's services, however, clients will have to

commit to buying at least \$100,000 worth of personal computer applications per year. "Companies that spend less than that amount for microcomputer software will probably continue to buy through traditional sources like retail stores," Smith said.

In addition to selling a wide variety of personal computer packages, the division will serve as a liaison between its customers and its cooperating publishers' support staffs. MSA is thus striving to offer big business a much needed single source, not only for all its microcomputer software, but also for all its maintenance and user training, Smith said.

Single sourcing, in turn, will enable MSA managers to control tightly their companies' software purchases, avoid the installation of incompatible systems and, therefore, promote the adoption of effective personal computer standards, he added.

MDD will also provide large corporate accounts with several other software-related services, including:

■ Pricing discounts typically ranging from 15% to 30%.

■ A series of nationwide, quarterly forums that will give customers an opportunity to discuss their personal computer applications needs with many of the industry's leading program publishers.

■ An IBM Personal Computer-compatible add-on board with a pre-recorded tutorial and a voice-synthesis unit that together will teach microcomputer operators how to use each MDD-supported application.

Formation of MSA's latest division follows the completion of a recent survey in which MSA sought to analyze the microcomputer installations and needs of the 2,000 largest corporations in the U.S. The study reportedly uncovered a widespread dissatisfaction with traditional methods of acquiring microcomputer software.

"Many big companies still buy most of their microcomputer programs through their local computer stores, but they're not entirely pleased with that arrangement," Smith said. "They dislike having to deal separately with five or six different vendors and would much rather get all their software, service and support from the same source."

## A BRILLIANT IDEA.

Under Hogan's Umbrella, your development center productivity will double—that's brilliant.

Imagine. A fully integrated development center system capable of upgrading and increasing output throughout the life cycle of both major and minor on-line and batch applications.

This completely automated approach to interactive development was critical in the development of our own highly successful line of applications software. That included design, management, programming, implementation, and maintenance of both on-line and batch applications. The Umbrella weathered well.

So well, in fact, users tell us that, "we lost our estimates by 30% on our very first major on-line application and that included our education time on the Umbrella."

There's a lot more the Hogan Umbrella can do. Just ask any Umbrella user... various combinations of DOS, VS, MVS, BAS, VSAM, CICS, IDMS, AS and Ed Loader, Vice President, at (214) 336-0020. Make a brilliant decision today.

Send me more information on your UMBRELLA System.

## Harris strategy to target Lanier

MELBOURNE, Fla. — Harris Corp. announced recently that its strategy in the word processing market will focus on the products of its recently acquired subsidiary, Lanier Business Products, Inc., and that Lanier's One-Step software package will be the companywide word processing standard for all Harris Information systems.

Harris will also present its Harrisnet local-area network architecture as the standard networking architecture for all Harris and Lanier information system products. That architecture, according to the company, will be applied first to the Lanier

# Semi bookings for U.S. mart forecast to slip

By Robert Scott  
CU West Coast Bureau

**NEWPORT BEACH, Calif.** — After reaching record levels in the fourth quarter of 1983, semiconductor bookings for the U.S. market will decline by 15% in the first three months of this year, according to In-Stat, Inc.

In a report presented to the Seventh Annual Information Services Seminar, sponsored by the Semiconductor Equipment and Materials Institute, Inc., In-Stat said bookings for the U.S. market will decline from a total of \$6.1 billion in the fourth quarter to \$5.2 billion in the current quarter.

Addressing the seminar, Jack Beidle, president of the Scottsdale, Arizona-based market research firm, said the "slump" to the last three months of '83 witnessed many manufacturers becoming increasingly gun-shy about product shortages, placing annual purchase orders in an effort to ensure sufficient products to meet rapidly increasing sales forecasts for 1984.

## Semi bookings leap

December semiconductor bookings, he claimed, leaped by \$150 million over November levels to \$1.1 billion, while sales moved up to \$680 million.

While there will be a relative downturn to the first quarter of 1984, Beidle predicted that semiconductor bookings will still increase by 20% for the year, after increasing 68% in 1983.

He said a smaller book-to-bill ratio this year will allow both suppliers and end users to schedule products more effectively.

At a press conference following the seminar, Beidle claimed 1984 should be a strong year for U.S. semiconductor manufacturers as compared with their Japanese counterparts.

"The Japanese manufacturers

have serious problems at the moment. They are hard pressed to supply their own clients due to the vertically integrated nature of their organizations and because of the tremendous amount of Japanese chip manufacturers that are trying to enter the lucrative computer industry," he claimed.

## More good news

Citing more good news for U.S. vendors, Beidle asserted that domestic suppliers are now mounting a viable challenge to Japanese dominance in the 64K-byte dynamic random-access memory (DRAM) market. A prime

example, according to Beidle, is Intel Corp., which "came from nowhere to become the world's third-largest manufacturer of 64K dynamic RAMs."

Remembering on the state of the industry, James Webster, director of product program management at IBM's General Technology Division, said the biggest single force in improving price/performance in the computer industry is the march of technology.

That IBM has been able to make price/performance improvements in the region of 30% a year is due almost entirely to the fact that semiconductor

technology is growing at an even faster rate than the DP industry itself, he asserted.

But Dan Bass, president of the Los Altos, Calif.-based consulting firm Bass Associates, Inc., told attendees at the post-seminar press conference that a string of recent economic indicators heralds the possibility of a downturn in the economy at a time of record bookings for chip manufacturers.

The expectations of spectacular growth to the industry during the next four years may therefore turn out to be premature, according to Bass.

## CUT YOUR COBOL TEST AND DEBUG TIME... AND YOUR COST!

**XFFCOBOL** is the first full-screen, interactive, SPF-like debugging tool on the market. It delivers a complete window into COBOL programs.

**XFFCOBOL** enables the user to:

- Watch the programs execute—forward or backward.
- Find and change COBOL data in COBOL format.
- Debug full programs.

**XFFCOBOL**:

- Streamlines test and debug time.
- Increases programmer productivity.
- Is easy to learn and easy to use.

**XFFCOBOL** can pay for itself in months.

## HARRIS

from page 94

5000 series and a new family of Harris distributed data processing systems and later to Harris supermini-computers, interactive and remote job-entry terminals as well as to a new generation of integrated video and data private branch exchange products.

John T. Bartley, president of Harris, said the company has refined its market focus to take advantage of Lanier's installed base of \$5,000 stand-alone word processing units and will concentrate on the recently released Lanier Business Processor 1000 and the Business System 5000 clustered network as its building blocks in the word processing market.

Harris also announced its Distributed Office Systems Division will be separated into its original two components: the Harris Distributed Products Division, to be headquartered in Dallas and managed by J. Whitney Hamey, who was previously responsible for the Distributed Office Systems Division; and the Word Processing Division, based here under Lanier Business Products and reporting to William J. Kelly, vice-president of research and development for Lanier.

## 'Visicalc' lawsuits proliferate

BOSTON — Lawsuits between Software Arts Products Corp. in Wellesley, Mass., and Visicorp in San Jose, Calif., have proliferated in recent weeks, as a longstanding disagreement between the two firms has heated up.

On Feb. 10, Visicorp was denied a temporary restraining order that would have prevented Software Arts from using the trademarks "Visi," "Visicalc" and "Visicalc Advanced Version."

Visicorp's suit was filed in response to an answer and counterclaims filed by Software Arts on Feb. 7. This answer amended a counterclaim Software Arts filed here last fall and charged Visicorp with breach of contract, while seeking to terminate an agreement that allows Visicorp to market Visicalc.

The agreement, signed in 1979, allowed Visicorp to market Visicalc, a spreadsheet program developed by Software Arts. In 1979, the program ran only on Apple Computer, Inc.'s Apple II microcomputer. Under the agreement, Software Arts was responsible for enhancing Visicalc and tailoring it to other microcomputers.

Last September, Visicorp filed suit in a California court claiming that Software Arts was late delivering new versions of Visicalc for a number of microcomputers, including the IBM Personal Computer. Visicorp accused Software Arts of using money earmarked for Visicalc enhancements to develop TKSolver, an equation processor.

Software Arts denied the charges and counterposed Visicorp for nonpayment of royalties, not promoting Visicalc to the best of its ability and 'developing Visicalc, which runs under Visicorp's Visi-On. Software Arts claimed that Visicalc is an enhanced Visicalc — so Visicorp should have offered Software Arts the opportunity to develop the program — and that Visicorp should pay Software Arts royalties for the product. However, Visicorp claimed that the product was developed from scratch.

Software Arts has indicated that it plans to market Visicalc with its own trademark. "One of the bylaws in the 1979 agreement states that if a breach of contract occurs, the Visicalc trademark reverts to Software Arts," said Thomas Moffat, a lawyer for the Boston firm of Choate, Hall & Stewart, which is representing Software Arts.

## M&D to market Software International's

NATICK, Mass. — In a move intended to skirt an injunction that has frozen international sales of McCormack & Dodge Corp.'s (M&D) G/L Plus general ledger package, M&D last week entered into an agreement with Software International, Inc. of Andover, Mass., for international marketing rights to

Software International's The System report writer subsystem.

The System is substantially similar to Fast, a report writer developed by ABC Management Systems, Inc. of Bellingham, Wash., and sold by M&D as part of G/L Plus. M&D has been enjoined from selling Fast internation-

ally as the result of a suit brought by ABC last year. In November, a superior court judge imposed the injunction and awarded \$2.5 million to ABC (CW, Dec. 5). The judge also awarded \$500,000 to Software International for reimbursement of expenses incurred in fighting a counter-suit by M&D against ABC

and Software International. On Feb. 1, a state appeals court upheld the injunction against M&D.

An M&D spokesman said the agreement with Software International, which is valued at over \$1 million, will effectively settle all claims between the two vendors. However, an appeal by M&D

Power. That's the key to CDI/100. It's a new concept in PC operating system environments so powerful, so personal and so remarkably flexible, that it can be tailored to the dimensions of any size operation.

We've integrated the best generic features of the mini-computer world with the convenience of Microsoft's MS-DOS.

The learning process is traversed as quickly and easily as an open door. What it brings

to your IBM PC is a new generation of data base management capabilities in a system that becomes as personal as your fingerprint.

For virtually limitless application in a system that will

## COMPUTER INDUSTRY

# 'The System' in effort to avoid 'Fast' injunction

is still pending in its litigation with ABC.

If the agreement is approved by the court, M&D will offer The System as a subset of G/L Plus. However, the software must undergo modifications, a process which could take several months. The spokesman said the deal was negotiated as

that M&D International sales representatives could continue to market G/L Plus with the promise that a Fast package would be available soon. M&D has also pledged to replace the Fast subscription with its own report writer sometime in the third quarter of this year.

M&D Chairman James M.

McCormack said the deal was negotiated after attempts to reach an out-of-court settlement with ABC had failed. "It became clear after extensive negotiations that there was no interest from ABC Management Systems in a reasonable settlement of this dispute," he said.

"That's an absolute lie,"

commented Vernon Rusk, president of ABC. "We offered them a settlement over a month ago, and we haven't heard from them since. They haven't negotiated seriously." The M&D spokesman would not comment on Rusk's countercharge.

Rusk estimated it would take six months for M&D to

modify The System, which is based on a later version of the ABC report writer, for use with G/L Plus. "I don't see how they could market [The System] without making those changes," he said. Rusk also added that ABC lawyers believe the agreement between M&D and Software International is "not feasible."

## IBM aiming to reassure bondholders

ARMONK, N.Y. — Despite its rapid and profitable domination of the microcomputer market, IBM's "large systems" still account for a substantial portion of revenue, the company reported in a just-released annual report aimed at reassuring shareholders of a continued conservative management style.

"Management is mindful of the risks inherent in high technology, the growing scope and quality of competition and uncertain economic conditions," IBM's report said. A major consideration of management is conservation of capital. In 1983, according to the report, IBM increased its cash on hand and marketable securities to \$6.5 billion, up from \$3.3 billion in 1982, and at the end of the year had accumulated total working capital of \$7.7 billion, up from \$4.5 billion at the end of 1982.

Along with that increase in liquidity, the company continued to decrease its investment in equipment for rentals, "consistent with the changing character of our business," decreasing that portion of its assets before depreciation to \$12.4 billion, down from \$16.5 billion in 1982. Revenue from rentals declined about 17% to \$6.2 billion.

A key management strategy, according to the report, is cost control through maximized productivity, and IBM held increased investment in plant and other property to 6% over the previous year, as general and administrative expenses climbed 14% and research and development expenditures climbed 17%.

A further indication of IBM's strategy of lowering its assets liquid was the disclosure that IBM Credit Corp. increased its purchases of installment payment agreements from the parent company to \$648 million in 1983, up from \$682 million in 1982, and purchased \$384 million of IBM products for term lease customers, up from \$47 million in 1982.

## COMPUTER INDUSTRY

## Computer counterfeiters gaining in numbers

During fiscal 1983 and the first quarter of fiscal 1984, over \$9.2 million of counterfeit computers were seized by U.S. Customs Service officials throughout the U.S., estimated Special Agent-in-Charge David E. Warren of the Philadelphia office of the Customs Service.

Apple Computer, Inc.'s Apple II and II+ and video games have been among the primary targets of computer counterfeiters. Even industry giant IBM is beginning to experience problems and has recently registered some copyrights with Cu-

stomers, according to Gary Becker, a copyright and patent attorney representing Apple.

In Taiwan alone, there are five to 10 major companies manufacturing counterfeit computers and literally hundreds of smaller manufacturing and trading companies as well, Becker estimates.

Counterfeiters are so numerous that fake Apples actually outsell the real thing 10 to one in Taiwan, the attorney said.

Among the variety of ways counterfeiters are attempting to evade

detection by the Customs Service:

■ Concealing components in shipments of other goods, like heavy machinery.

■ Sending computer components in separate packages, via air mail and air freight, to private residences or separate addresses.

■ Falsifying package labeling as to contents and value or falsifying cargo documentation.

■ Shipping completed computers minus printed-circuit boards or read-only memories, which are shipped under separate cover.

APPLE See page 55

not intend to pursue the issue of copyright infringement, according to David Stittin, an assistant U.S. district attorney handling the case. Instead, Apple will have to decide whether to pursue any alleged copyright violations through civil litigation, he said. As Apple spokeswoman said the vendor is considering such action.

However, Stittin said "there is no question that these [the defendants] had it in mind that they could not get these components into the U.S. unless they concealed them in other shipments or by mislabeling packages and, in some cases, adding these packages to their boxes." Stittin noted that when "you turn the [assembled computer] on, it says 'Apple.'" And, he added, the parts are so similar, that when placing their orders, the defendants asked for Apple II parts.

An initial tipoff from Apple about illegal sales in the area included one company that was already under investigation for other customs violations, Warren said. Four of the six in Philadelphia were nabbed via a sting operation involving local police, customs officials and some technical assistance from Apple.

The first indictment concerns Alberto K. Chen and Alvin D. Koh and their three import companies. The two men are each charged with four counts of smuggling and one count of conspiracy. Specifically, they are accused of smuggling counterfeit Apple II parts into the U.S. and selling them to Joel M. Isidore and Daniel Ryan.

Chen and Koh each face a maximum prison sentence of 35 years and a maximum fine of \$40,000. Their three companies are each charged with one count of conspiracy, two of the three are also charged with two counts of smuggling and face a maximum fine of \$50,000, and the other faces a maximum fine of \$10,000.

Isidore is also charged with conspiracy in the second indictment, which concerns the alleged activities of Robert Ellis, his two import companies and his son David. The senior Ellis is charged with four counts of smuggling and one count of conspiracy and faces the same penalties as Chen and Koh.

Ellis is alleged to have asked Taiwanese manufacturers to send fake Apple II parts via air-mail parcel post in mislabeled packages, each as "electric part samples, no commercial value." The indictment further alleges that the three men received counterfeit Apple parts and assembled look-alike computers from February to April 1983.

LOTUS See page 55

In the first quarter of 1983 and 160,000 in the second quarter, the newcomers are going to have to ship in the hundreds of thousands, and do it quickly in able to corner the marketplace before new developments overtake them.

Secondly, as the competition heats up it's going to take many more millions of dollars to market a new product successfully.

So there are likely to be few Lotus in the future and more and more software developers signing up to established muscle, like Microsoft, and maybe even Lotus itself.

Run with the best...

## NOTES &amp; DATA

Compucon Computer Corp. posted a yearly profit of \$4.7 million, or 24 cents per share on sales of \$111 million during 1983; its first year of operation. Profits in the fourth quarter totaled \$5.3 million on sales of \$52 million.

Vector Graphic, Inc. announced its results for the second quarter, posting a \$1.9 million loss on sales of just \$3.3 million, compared with a profit of \$107,000 and sales of \$11.9 million posted during the same period a year ago.

The Ultimate Corp. has announced third-quarter revenues of \$18.5 million and earnings of \$2.7 million, or 26 cents per share, up 76% and 116%, respectively, over the same period last year.

Computer Task Group, Inc. has reported revenues for 1983 of \$54.2 million, up from \$40.1 million a year ago. Earnings increased 27% to \$1.5 million.

Purkin-Blum Corp. recently reported second-quarter profits of \$14 million, or 32 cents per share, up 36% over the same period a year ago, on revenues of \$298.7 million, up 6% over the year-earlier figure. Profits for the first six months of fiscal year 1984 were up just \$1.5 million over the previous year, reflecting a poor first quarter in 1984 when profits were \$8.6 million, down \$2.3 million from the year-earlier benchmark, on revenues of \$246 million.

Computer Consoles, Inc. has reported that revenues for 1983 rose 31% to \$103.6 million, up from \$79.1 million for 1982. Net income was \$10.4 million, or 87 cents per share, up 40% from \$7.4 million, or 66 cents per share, in the prior year.

Gray Research, Inc. has reported revenues of \$62.5 million and earnings of \$19.2 million, or \$1.31 per share, for the fourth quarter ended Dec. 31, compared with revenues of \$62.9 million and earnings of \$12.2 million, or 87 cents per share, for the comparable period last year.

Electronic Data Systems Corp.'s earnings per share for the second quarter of fiscal year 1984 were 21 cents

per share, up 24% from the same period last year. Quarterly revenues rose 22% to \$188.6 million, and profits were up 24% to \$17.5 million.

Prime Computer, Inc. recently announced it had successfully renegotiated its \$100 million line of credit with six major banks, extending the initial agreement through 1991 and reducing borrowing costs and compliance requirements.

ON-LINE See page 93

pany using technology must incorporate the latest technical developments into its operation."

Realizing how complex on-line data base systems are, some companies also joined forces with application vendors to design these systems. But few banks, insurance or financial companies had any experience designing and implementing data base systems. They underestimated the cost and complexity of the projects.

"Millions of dollars were thrown away developing elaborate on-line data base systems that were never delivered," said Michael Sulzberg, principal at the Plogson Group, Inc., a New York consulting firm specializing in data base technology. "Problems arise when users with diverse

needs access the same data."

Design methods, not technical limitations, create problems. "Some vendors and data processing departments understood the difficulty of designing these systems," Ross said. "Even with technical advances, companies must take a comprehensive analytical look at system needs, set realistic expectations and be totally committed to the system."

"The technology can be improved, but problems surface from the scope and design of the system. Many companies do not have the proper administrative structure in place to design and implement these systems."

In some cases, project control slipped away. "These are huge systems, too large for one person to design," Ross said. "Since this is the nature of the beast, conventional design

approaches won't work. Implementation has to be different. Each module has to fit into the system. There has to be division of labor to ensure that the system is well designed."

Conventional programming often do not have the proper tools to design these systems. "Data processing managers have to retrain their people," said Dan Nolan of Heuristic Development in Annandale, Va.

"Data processing departments must invest in their people. No one works with hexadecimal anymore. They must stop programming in Cobol and other languages and work with the new natural languages," he said.

Another problem is that vendors often build too many features into the system. "There were features in the [Anacom] C3 system that were

not needed," said Condit. "It had features like simultaneous batch and on-line processing, which a bank doesn't need. Anacom built the system so that it was easy to sell and maintain."

Engis Systems, Inc. in Dallas succeeded where Anacom failed. Its on-line banking system, less ambitious than the Anacom system, is up and running.

Granger design also handled Insurance Systems of America, Inc.'s system. After purchasing the system, Maryland Casualty changed system specifications and delivery dates. "Since the sale, there has been an improvement in meeting delivery dates," said Lawrence Becor, second vice-president of data processing at Travelers' Insurance Co. "The quote portion of the general liability system is up and running in 75 Travelers' service offices."

# Advertising

## The one-stop, international advertising service for micro marketers.

ou'll reach microcomputer buyers all over the world with Computerworld's International Marketing Services (CIMS). Because we have the microcomputer market covered with an international network of publications. And what a market!

As the need for computerization in government, industry and educational systems all over the world becomes more acute, countries look to the cost-effective, adaptable microcomputer to bring them into the computer age. This means a very lucrative market for the U.S. micro marketer, since international product demand exceeds product supply.

Now, with the help of Computerworld's International Marketing Services, you can advertise in seven magazines devoted exclusively to supplying information to microcomputer users throughout Australia (MicroWorld), Brazil (MicroAmado), Denmark (MicroVest), Finland

(Micro), France (Golden), Japan (PuroCom World), Norway (Micro Data), Sweden (MicroData), New Holland, Spain (Micro Sistemas), The Netherlands (MicroInfo), West Germany (MicroComputers), P.C. Welt.

And, your advertising message can reach buyers of microcomputer products and services around the world through special micro sections in any of our 40 publications in 25 countries.

Act now—and take advantage of this international demand for microcomputer products. Whether you want to test the market—or locate a distributor or representative—our publications will put you in touch with the right people around the microcomputer world.

For more information on getting international micro coverage, call Diana La Muraglia, General Manager, International Marketing Services, toll-free, at 800-943-6474. In Massachusetts, call 617-870-0700 or return the coupon below.

## Software Design Engineers

# If you like technology, you'll love Texas Instruments in Dallas or Lewisville.

Join the Equipment Group of Texas Instruments in the design and production of state-of-the-art electronics systems and subsystems such as radar, missile guidance, electro-optics, communications, navigation and intelligence systems. Our continued innovation in every realm of the government electronics business has made Texas Instruments a leader.

As a result, we're creating new career opportunities for qualified software design engineers. You'll work with a team that works on complete systems — not just components. You'll have the chance to broaden your technological capabilities and be recognized and rewarded for your accomplishments.

Right now, we have immediate openings for experienced software design engineers in the following areas:

- Real-time electro-optics projects (mid-level positions)
- Tool and language development (ADA and Pascal experience preferred; mid-level positions)
- Artificial intelligence software design
- Systems analysts for VAX/VMS operating systems

- CAD/CAM programmers
- Speech recognition applications designers

All positions require U.S. citizenship, a four-year technical degree and at least two years of related experience.

Now is your chance to make your career move to the dynamic Sunbelt and enjoy the Texas environment and lifestyle. Dallas and Lewisville (just outside of Dallas) have year-round recreational activities, lakes, major league sports, museums and theatre. The Dallas area boasts one of the lowest costs of living of any major metropolitan area in the nation and Texas has no state or city income taxes.

For immediate consideration, send your resume in confidence to: Ed Haynes/Texas Instruments/P.O. Box 226015, M.S. 3186/Dallas, Texas 75266.

U.S. citizenship is a firm requirement for all Equipment Group positions.

An Equal Opportunity  
Employer M/F

Career opportunities in one of the country's most advanced data centers

We are state-of-the-art now and going beyond... present equipment consists of an IBM 3081 and two IBM 3033s utilizing MVS and VM for IMS, CICS, TSO and CMS. Under IBM's Systems Network Architecture, we are running 8100s under DPPX and DPXC. Within our Manufacturing Information Network, we are running

DEC PDP 11 products under RSX 11M+ with DECNET. As we continue to be innovative and increase our Information Services capabilities, we have created an environment that is charged with challenges and most of all...career opportunities. Immediate opportunities are now available for the following:

### SENIOR TECHNICAL ANALYST TECHNICAL ANALYST

- Solid experience developing/implementing systems software • IBM-MVS environment (XA desirable)
- IMS internals • IBM 8100 DPPX (SPT desirable) including DTMS/HTF experience
- DEC RSX-11M+ with DECNET • Minimum 4 years experience

When you join Philip Morris U.S.A. you will be joining a growth company. Our starting salaries and benefits are among the best and our career opportunities are hard to beat.

## IDMS ADMINISTRATOR Southern California

Information Center, a major computer services company  
located in Sunnyvale, California, is currently seeking an IDMS Data  
Base Administrator. This individual will assist in rapidly increasing  
customer community in Systems and Technical Support.

The ideal candidate will have a minimum of 3 years experience  
with the following family of Cullinet software: IDMS-DC/UCF, Cu-  
per, ADRC/Online, ADRC/field, QLO, CLM and CO as well as expe-  
rience with BAL, PL/I or COBOL. This administrator will be re-  
sponsible for establishing data bases, installing system software,  
data base tuning and establishing standards and procedures for  
the usage of IDMS. This year's plan also includes the installation  
of IDMS/RT.

Information Center also offers the advantage of exposure to an even greater  
array of state-of-the-art software and hardware. IAC is contin-  
uously located in suburban Caroga Park, just 20 miles from the  
Los Angeles area, yet without the traffic and congestion of  
this city, and provides competitive salaries, an outstanding bene-  
fits package and exceptional career potential. For IMMEDIATE  
consideration call COLLECT or send resume with SALARY RE-  
SPONSE to:

Sarah Jackson

### PROGRAMMER/ANALYST

Excellent opportunity available in the  
Sunbelt for an experienced Program-  
mer. Our rapidly expanding savings and  
loan has an immediate opening for an  
individual with 2-3 years direct pro-  
gramming experience. Familiarity with  
COBOL, Burroughs 52000 series and  
Third Normal systems preferred. Col-  
lege degree a plus.

We offer an excellent benefits package  
and salary commensurate with experi-  
ence. Please send resume with salary  
history to: South Savings and Loan,  
P.O. Box 800, Shreveport, LA 71101, Attn:  
Sally Simpson.

## SAS Institute... setting the pace

At SAS Institute, we are committed to providing the best in software and service. We offer a complete line of Institute Program Products for data management, statistical analysis, report writing, color graphics, forecasting, and data entry. We support these products through ongoing research and development, a complete library of documentation, and a comprehensive training program. Currently, we have openings for:

**Software Sales Representative** will license software products to new sites and current sites via telemarketing. Applicants must have experience in software sales and knowledge of the applications software industry, specifically in mainframe and minicomputer markets. Telemarketing experience is a plus. A bachelor's degree, preferably in business, statistics, or computer science is required. Travel is minimal.

**Technical Support Supervisor** will maintain and support the SAS supervisor and related components for the IBM OS/VS and MVS/ESA environments, and interface with customers on problems that require an in-depth knowledge in the related areas. The Technical Support Department interfaces with SAS installations, interpreting documentation, explaining error messages, and investigating and documenting reported problems with the SAS System. Applicants must have experience with IBM S/VS Assembler and exposure to IBM MVS supervisor and data management services macros. Excellent verbal communication skills and a bachelor's degree, preferably in computer science, are required. Familiarity with operating system concepts, compiler design and implementation, PL/I, and the SAS System are significant assets. Knowledge of the VM/CMS environment, and experience supporting large software systems and using IBM service aids, such as PCPS, are desirable.

**Quality Assurance Analyst** will work with various Institute departments to test the SAS System. Specific responsibilities include development and maintenance of systems for tracking software through development, testing, and release; development of testing tools; documentation and testing of SAS procedures; and coordination of product testing. Applicants must have knowledge of SAS software, extensive knowledge and experience with an operating system, willingness to work with other operating systems, and good written and verbal communication skills. A quantitative degree is required.

**OS/VS Systems Software Developer** will develop and maintain the SAS supervisor and related components for the IBM OS/VS and MVS/ESA environments. Use of IBM S/VS

Assembler as a programming language and exposure to OS/VS supervisor and data management services macros are required. Experience with the development and support of large software systems and the use of IBM related aids is desirable. Familiarity with operating system concepts, compiler design and implementation, PL/I, and the SAS System are significant assets. A bachelor's degree, preferably in computer science, or equivalent is required.

**Compiler Systems Developer** will be responsible for the design and implementation of a PL/I-to compiler. Applicants must have a BS in computer science or mathematics and a strong background in block structured languages, preferably in PL/I. Experience in design and construction of state-of-the-art compilers and familiarity with optimization and code generation issues are required.

**Communications Systems Software Developer** will develop and maintain the SAS supervisor components for the IBM MVS, VM/CMS, and VSE environments that interface to communications terminals and access methods, such as the 3270, 3287, 3295, and ACFTAM. Use of IBM S/VS Assembler as a programming language and knowledge of SNA protocols, 3270 data streams, and MVS or CMS supervisor services macros are required. Experience with the development and support of large software systems and the use of VTAM/CMPC service aids is desirable. Familiarity with PL/I and the SAS System are significant assets. A bachelor's degree, preferably in computer science, or equivalent experience is required.

**Microcomputer Software Developer** will design and develop the SAS System for microcomputers. Applicants must have in-depth knowledge of 8088 Assembler language, C language, and IBM PC-DOS BIOS. A bachelor's degree in computer science or equivalent experience is required. Experience with full-screen and graphics drivers is highly desirable. Applicants must provide samples of related work experience.

**UNIX Minicomputer Developer** will be responsible for helping develop SAS software to run under UNIX. Applicants must have 3 to 4 years of experience with C language and UNIX. A bachelor's degree in computer science or a related field is required. Experience with minicomputers, knowledge of PL/I, and SAS software is highly desirable.

**VAX/VMS Systems Programmer** will assist in development of host routines and SAS interface routines for Digital VAX systems. Applicants must have at least two years' experience with VMS and Macro-11. PL/I programming experience is a significant asset.

**Systems Developer** will assist the development of the SAS System on various minicomputer systems. Applicants must have a minimum of two years' PL/I programming experience and working knowledge of SAS software. Experience with one of the following minicomputer systems: Digital VAX under VMS, DO MV under AOS/VSE, or Prime under PRISMOS is desirable. A BS in computer science is required. Knowledge of SAS/GRAPH and SAS statistical procedures is desirable.

**Testing & Documentation Systems Programmer** will perform source code management functions, including documentation of procedures and consultation for SAS system developers working with various minicomputers. Applicants must have 1-2 years' data processing experience, with a working knowledge of PL/I and SAS software. Candidates should have experience with IBM under TSO or VM/CMS, or one of the following systems: Digital VAX under VMS, DO MV under AOS/VSE, or Prime under PRISMOS. One to two years' VMS experience is desirable. A BS degree in computer science or equivalent is required.

**Minicomputer Programmer** will develop the SAS System for various minicomputers. The individual will write and maintain code and documentation, transport code, prepare master tapes, and educate users. A BS degree, preferably in computer science, and PL/I knowledge are required. Minicomputer experience, knowledge of SAS software, and Assembler language experience are preferred.

**DB Minicomputer Programmer** will be responsible for developing the SAS System for the Data General EQUIPSE. Responsibilities include writing and maintaining machine-dependent code, revising documentation, transporting code from the VAX to the EQUIPSE, and assisting in debugging tests. Applicants must have knowledge of PL/I and a BS degree, preferably in computer science. Experience with Data General minicomputers, knowledge of SAS software, and Assembler language experience is preferred.

SAS Institute offers competitive salaries and excellent benefits. The attractive, 100-acre leased campus in Cary, North Carolina—adjacent to the prestigious Research Triangle Park—provides a people-oriented atmosphere, conducive to personal productivity and inventiveness.

If you think you can meet the challenge at SAS Institute, send a detailed letter or resume to Department 0220 by February 28, 1984.

SAS Institute Inc.  
Box 5000  
Cary, North Carolina 27511

## POSITION ANNOUNCEMENTS

## Aircraft Division

## The People Behind Our Programs Include Programmers.

Behind the innovative design techniques employed by our Engineers are dedicated software professionals who, working closely with Engineering design teams, develop Northrop's NCAD/NCAM systems. Behind our efficient manufacturing processes are Automated Management Systems Specialists who design programs which integrate the full range of Manufacturing and Material functions. And as our business operations continue to grow, our Business Systems Analysts enhance the division's project management and control systems.

Experienced Programmers and Systems Analysts with expertise in the areas listed below should investigate current opportunities to get behind the programs at Northrop Aircraft Division.

**Manufacturing & Material Systems**  
COBOL Programmers with 3-10 years of experience utilizing TSO, preferably with IMS/DC experience will develop, maintain and plan new systems ranging from MRP through work-in-process to configuration documentation systems.

**Financial/Contract & Pricing Systems**  
COBOL Programmers with 3+ years of experience including IMS DB or DC will develop and maintain divisional financial, contract reporting and automated proposal systems. Senior Programmers with IBM 8100/CPU Host integration experience are of special interest.

**Graphics & NCAD/NCAM Systems**  
FORTRAN/IBM Assembly Language Programmers with 3+ years of experience, preferably with a BSCS or BSME will integrate into the scientific computing systems group where they will develop interactive 3-D graphics, structural dynamic analysis and other engineering support systems.

If you're experienced in any of these areas, we welcome your inquiry. Please forward your resume with salary history to:

## OVERSEAS

Saudi Arabian Airlines, national flag carrier of the Kingdom of Saudi Arabia, is seeking qualified personnel for the following positions:

### SUPERVISOR RELIABILITY PROGRAMS

Monthly Salary \$2800 U.S. Dollars

#### DUTIES

Lines with users and develop and maintain computer programs for aircraft reliability, fleet statistics and computerized engine testing and maintenance. Conduct statistics on component removals, target and short maintenance, implement recommended changes in maintenance programs and monitor improvements as a result of such changes.

#### REQUIREMENTS

Degree in a computer related field and at least 3 years experience in design and development of real-time software systems for engineering applications using Fortran and Assembler on main computers. Experience on HP-100 with RTR-100/4 operations systems a definite asset. Airline background preferred.

### SENIOR PROGRAMMER

Monthly Salary \$2800 U.S. Dollars

#### DUTIES

To develop and maintain computer programs for aircraft reliability and fleet statistics.

#### REQUIREMENTS

Degree in computer related field and at least 3 years experience in design and development of real-time software for engineering applications using Fortran and Assembler on main computers. Experience on HP-100 with RTR-100/4 operations systems would be a definite asset.

The salary shown above in U.S. dollars per month has been converted from Saudi Riyals at the current rate of exchange which are subject to fluctuation.

#### BENEFITS

Free furnished air-conditioned housing and utilities • Paid medical and group life insurance • 30 day vacation-leave time to and from destination • Free or reduced rates on Saudi and other airlines • Retirement program (pension insurance after 14 years service) • Additional household shipment from domicile to Saudi Arabia and back • U.S. schooling for children - out of Kingdom financial assistance for other grades • Annual service increase and eligibility for yearly work bonus based on performance.

Position is offered on a two-year (renewable) contract.

Send resume to:

SAUDI ARABIAN AIRLINES  
Administrative Recruiter, Dept. NP-8  
2420 Pershing Rd., Suite 333  
Kansas City, Mo. 64108

### M. I. S. PROFESSIONALS

Helmuth Laboratories, a leading manufacturer of telecommunications instrumentation, is seeking Management Information Systems programming and operations professionals to staff a new computer center. Candidates should have experience with integrated manufacturing and accounting applications software. These positions require Bachelor's degrees or equivalent.

We offer an excellent benefits package including medical, dental, and life insurance and a retirement program. Qualified candidates should send confidential resume and salary history to Ed Coward, Personnel Administrator.

Helmuth Laboratories, Inc.  
8200 Galtier Road  
Cockeysville, Maryland 20677  
EOE M/F

# "Whatever It Takes."

**Brian Blisk** began working for Cincom Systems in 1977 as a programmer. Initiative and sound thinking have served Brian well. Today he is a Cincom Technical Service Center Manager and an authority on the support and service of leading edge software products. From a recent interview here are Brian's thoughts on support, software and a career with Cincom Systems.

**The Role Of Service And Support**  
"Bottom line, the role of service and support is to help Cincom's customers become more successful. As our customers become more successful, Cincom becomes more successful."

**Solving Problems**  
"I believe the reason my experience at Cincom has been so fruitful is that my personal philosophy and the philosophy of the company are the same. We both believe in doing whatever it takes to solve a problem or meet a customer's needs. That could mean on-site help. It could mean consulting. It could even mean designing a specialized program. But whatever it takes, we do it."

**A Concept Of Partnering**  
"Cincom's philosophy has been with the company since the word go. No matter how tough the problem, nor where the cause, we're right there in the trenches with our customers. A goal of ours is that no critical problem will be unresolved for as much as 60 minutes. And we hit this goal in over 98% of all instances."

## Leading Edge Technologies

"Support people are like anyone else in the computer business; they thrive on challenge and they want to work with the leading technology. TIS™, ULTRA™, MANTIS™, MRPS™, MANAGE USER SERIES™, PC CONTACT™... these are some of the newest and most advanced systems in the software industry. And these are the products our people are working with everyday. By working with challenging, leading edge products, people develop a strong personal commitment to leadership and to quality."

## Excellence In Software Technology

"To me, excellence in software means having the sense to look beyond the present and into the future. Let's face it...

the computer business is changing as fast as any business ever has. Anticipating a customer's needs takes vision. In my opinion, no one else comes close to Cincom's vision. That's why we are producing the truly excellent software technologies in our field."

## People

"I don't know about other software vendors, but at Cincom some of the most talented people in the company work in support. They have to. We deal with Fortune 500 companies who are striving to advance the state-of-the-art. Often we work directly with the top DP person within the company. So, our people have to be of the same top-notch caliber to be effective. Leading edge companies need leading edge people. And, I'd say to any top-notch self-starter who truly knows the business and is a team player, 'Cincom is definitely the place for you.'"

## Advancement

"As Cincom, how fast a person advances depends solely on merit. When people interview for a position in support I want them to know two things: First, that Cincom is a positive, fast-paced place. And secondly, that it is an environment that will allow them to progress as fast as they are able."

**Support, Sales, Marketing and Development.** We're looking for talented self-starters in all of these areas.

For more information on a career with Cincom Systems, send a cover letter and a resume to:  
Marilyn Jacobs,  
2300 Mountain Avenue,  
Cincinnati, Ohio 45211.  
Or, call: 1-800-543-3811.

 **Cincom Systems**

# Join The Team That Created The Elegant NS16000

An elegant approach led to a very elegant solution — National's NS16000 microprocessor and its product family. The revolutionary top-down architecture delivers 32-bit power, and memory management capabilities on par with the latest mainframes. The upward-compatibility will accommodate a shift from 16- to 32-bit hardware. In essence, the NS16000 performs more like a computer than a chip, and we think that's a very elegant package.

## A "Software-Intensive" Effort.

The NS16000 microprocessor is the spring-board for an entire family of products currently being developed at National's Microprocessor Systems Division. The key to their success lies in the development of software that enhances the NS16000 family's performance, applicability, and elegance. From development through marketing, our "software-intensive" effort is rapidly gaining momentum as we develop demand-paged UNIX® systems based on Berkeley 4.1 and 4.2 for National's NS16032 and NS32032 microprocessors. We are also working with Bell Labs to define a version of SYSTEM V, . . . etc., for NS16032 and NS32032. These developments are creating opportunities for software professionals with UNIX and IBM PC® experience to join us in the following areas:

### Sr. Software Engineers: Compiler Development

You will be involved in developing compiler code optimizers for "C", Pascal, FORTRAN, etc., to take advantage of NS16000 elegant architecture. Your background should include two to five years' experience in compiler development; UNIX experience is desirable.

### Sr. Software Engineers: Language Tools Development

You will be involved with developing assembler, linker, or debugger. Requirements include two to five years of language tools development experience, including knowledge of "C", Pascal, FORTRAN, and UNIX.

### Sr. Software Engineers: UNIX System Architect

You will be involved in defining the future UNIX system products for NS16032 and NS32032. Two to five years' experience in UNIX kernel and system development is desired.

### Sr. Software Engineers: UNIX Kernel Development

You will work on porting Berkeley 4.2 and NS16032 and NS32032 based microcomputer systems (including a popular PC configuration with NS16032 and NS32032 add-on board). Two to five years' experience in UNIX kernel development is desired.

### Sr. Software Engineers: Networking

You will work with developing/porting networking software under Berkeley 4.2 and NS16032 and NS32032 based microcomputer systems. Two to five years' experience in networking protocol design and development is desirable.

## The Rewards Of Elegance.

The elegance and power of the NS16000 will become evident as more software is developed for it. And those who develop that software will reap the rewards, personally and professionally. That's definitely something to think about if you're ready to take on the challenge of our opportunities.

To learn more about National's Microprocessor Systems Division, send your resume to National Semiconductor, Dept. MS, P.O. Box 62499, Sunnyvale, CA 94088. We are an equal opportunity affirmative action employer. Principle only please.

# NS16000

Elegance is everything.

*Don't talk about  
your summer*

# SYSTEMS ANALYSTS

## For a handpicked team.

Here's an excellent opportunity to enjoy the invigorating pace of a small, hand-picked organization; the benefits and extensive career path of a major corporation; plus the stimulation of diverse assignments such as personal productivity services, documentation distribution, library services, test transformation, education and training. You will work with users tailoring systems development and integrating existing software.

Rapidly expanding Boeing Computer Services has openings for Systems Analysts with 1-2 years' experience in an IBM environment, specifically on IBM 8100 with DPCX/DOSF. A familiarity with TSO would be helpful. Exposure to Wang and Xerox word processing systems is also desirable. Experience with SNA, DIA and DCA is an added plus. BS/BA degree or equivalent experience and training is required.

For immediate consideration, send your resume and salary history to: **Walt Sanderson, Boeing Computer Services Company, 7500 Oakwood Court, Dept. CW-4, Vienna, VA 22180. An Equal Opportunity Employer.**

## BOEING COMPUTER SERVICES

A Division of The Boeing Company

### Director for Computing and Educational Technology

The Director will implement a strategic computer plan, working closely with computer committees and school administrators. He or she will establish and operate a professional services center to assist students, faculty, researchers and administrators and maintain an information clearing house. He or she will maintain hardware and software inventory and negotiate discounts in purchasing.

The Director will develop fundable proposal packages and oversee the establishment of a central support computer network of mainframe and micro-computers, audio-visual aids, closed circuit TV and other instructional technology.

A masters degree and 8 years relevant experience with knowledge of long-range computer planning and state-of-the-art mainframe/micro-computer technology is required. A doctorate and university experience in systems development, computer faculty directing and teaching is desirable.

Send resume and salary requirement to: **Ms. Jacqueline Matthews, Director, Administrative Services, The Wharton School, University of Pennsylvania/CC, Philadelphia, PA 19104.**

The University of Pennsylvania offers equal opportunity affirmative action employer.

### 1988 DUFFY PLANNER IS BACK

## The Future is Here!

Pacific Bell is facing an exciting future, with a new identity and new goals. Now you can be among the first to work in our exciting, new state-of-the-art center in San Diego.

### STAFF ANALYST

As an integral part of our time-sharing organization, you will be responsible for systems software maintenance, systems goals and performance. You will also be involved with programming and some essential utility routines. You will qualify if you have 3-5 years VAX/VMS systems programming experience. A BS or Computer Science degree would make you especially competitive as would strong analytical/mathematical skills. The job may require some overtime and travel. One major highlight of this position is that you will have this professional freedom to work in an unstructured, unrestrained environment. Salaries for this position can range from mid to high levels (depending on qualifications) and our benefits are outstanding.

If making your imprint on a dynamic, new company appeals to you, send your resume to Pacific Bell, Management Personnel, 1001 Wilshire Blvd., Suite 300, Dept. 80-10, San Diego, CA 92107. No phone calls provided. Privilege only, please. We are an equal opportunity employer.

3. Would you like to CHECK OUT THE "SECRET" in the COMMUNITY in order to determine your value in the marketplace?

4. Are all of your dreams just —  
Pick up the phone, YOU MAY  
CALL US NOW!

**FACT 1:** E-Systems Garland Division is a pioneer in the field of engineering has been revolutionizing electronics systems technology for decades.

**FACT 2:** In the most recent Fortune 500 rankings, E-Systems stands Number One in return on investment and 353 in sales.

**FACT 3:** E-Systems offers a professional working environment with a fascinating benefits plan, FLEXICOMP, and an employer's stock ownership plan.

**FACT 4:** E-Systems objective is to become the world's largest producer of high technology, non-consumer electronics. If you are looking for a high-tech company with a strong financial future, you are invited to explore membership in our family by sending your resume.

#### Project Leaders

BSCS, EE or Math with 5 years experience in software project planning, procedures, Unit Development, Proposal writing and cost estimating of government-type programs. Experience with VAX, IBM mainframe, Gould SEL or TANDDEM computers preferred. VLSI and VHSC experience a plus.

#### Senior Software Engineers

BSCS, EE or Math with 5 plus years experience in definition, design, development and delivery of software systems utilizing DEC/VAX, IBM mainframe, Gould SEL or TANDDEM computers. Required fluency in PASCAL, structured Fortran (Fortran-77), Assembly, COBOL, ALGOL, BASIC, C, and/or other languages. Proficiency with VMS, UNIX, MVS or SYSCEN OS expected.

#### Software Engineers

BS MS CS, EE, Physics, or Math with experience in program development, design and analysis for real-time, hierarchically distributed systems utilizing IBM mainframes, DEC (PDP/VAX), Gould (SEL), TANDDEM or Motorola (6800, 68000) computers. Proficiency in structured Fortran (Fortran-77), PASCAL, PL/I, TAL, MACRO-11 or Assembly languages required.

Electronic Warfare, C, Reconnaissance, data base applications, operating systems, I/O interfaces and/or communications backgrounds preferred.

#### Senior MVS Specialist

BSCS with 8 plus years experience on IBM mainframe as MVS-interfacing, ACI II and CICS background highly desirable. Manufacturing environment background a plus.

#### Software Test Engineers

BSCS, Math, EE with 3 plus years related experience to include the definition of software test requirements, generation of test plans/procedures, test execution and reporting, related computer system and language background necessary.

#### Project Analyst

BSCS or related degree with 7 plus years experience (at least 3 as Project Leader) utilizing IBM mainframes, MVS experience required; CICS or database management a plus.

#### Communication Specialists

BSEE, Math or CS with 5 plus years experience with bit, byte and asynchronous protocols in the design of communications-based systems (computer to computer, device to computer) using Tandem computers with GLADIAN operations system. Proficiency in TAL required.

#### Data Base Administrators

MSCS/Math or EE with 5 plus years experience building and managing large data base systems. Must have working knowledge of structuring, distribution of algorithms and full scale techniques. Must be capable of supervising total project resources. VAX or TANDDEM systems required with PASCAL or TAL fluency.

#### Artificial Intelligence Specialists

Ph.D. or equivalent in Math, EE or CS with 5 plus years related experience applying knowledge-based engineering systems to electronic/hybrid systems. DSP proficiency expected. Researchers will have access to personalized AI workstations.

Must have experience in the INTERLISP-D programming environment and SHAL/TALK systems.

#### Senior VMS Specialist

BSEE (MS) or CS with 10 plus years related experience with VAX systems as PASCAL fluency. Must be VMS specialist within I/O driver systems. Defense environment background a plus.

## EDP Professionals

Middle South Services has one of the South's largest data processing centers serving one of the nation's largest power systems. Middle South Utilities, our parent company, is a major electric utility. Our hardware environment includes IBM 3084s, and IBM 4341 and Tandon model 16s. If you are a career-oriented EDP professional, we have the following opportunities available:

**PLANNING AND CONTROL ANALYST** A current opening exists in our Planning and Control section for an Analyst to work on the implementation and training of a systems development methodology package. The ideal candidate will have a B.A. in Business and 2-3 years experience in a computerized environment monitoring compliance with systems development standards, with an emphasis on planning and control. Experience in development of methodology is a strong plus with experience on methodology software packages.

**PROJECT LEADER** With strong leadership skills needed to coordinate the enhancement/maintenance and program performance effort of our power plant maintenance/information systems. Previous experience as a lead analyst or project leader in power plant or maintenance systems is required. Experience on large IBM mainframe is needed and exposure to IMS DB/DC is a plus.

**ANALYST/PROGRAMMER (DATA SECURITY)** An experienced computer professional is needed to work with the development and support of data security requirements for on-line systems. The ideal candidate will have previous applications programming experience utilizing IMS DB/DC along with a desire to develop technical and analytical skills pertaining to security issues. Previous data security experience preferred, especially heavy usage of ACF 2.

**SR. ANALYST/PROGRAMMERS (APPLICATIONS)** Several positions are currently open for experienced IMS DB/DC Analyst/Programmers. Experience with COBOL or PL-I in plant maintenance or business applications is needed.

**SYSTEM ANALYST** With experience in on-line corporate data base design and/or information systems planning is needed in an information resource management section. The ideal candidate will have at least one year experience in logical data base design along with 2 or more years of IMS experience or other data base management systems.

Due to our size and scope of operation, we offer access to advancement, career stability and an excellent salary with major benefits. For more information, call our number below or to apply directly, send your confidential resume to Bryan Heath or Richard Jackson, MIDDLE SOUTH SERVICES, INC., P.O. BOX 27699, NEW ORLEANS, LA 70171.

## Software Systems Engineers Software Development Engineers

If you want to build a new software division capable of providing total life cycle support...

## Harris Can Make It Happen

If you want an aggressive entrepreneurial setting—then the Software Operation of Harris Corporation Information Systems Division could be the place for you. We are developing and using state-of-the-art methodologies, and have the opportunities for you to achieve the recognition you deserve. Positions are available in our Florida, Colorado Springs, and Washington D.C./Baltimore facilities. Requirements: BS in CS, EE or related technical disciplines, MS or PhD desirable. Experience in the government contracting environment helpful.

**SOFTWARE SYSTEMS ENGINEERS** System-level design experience desired in some of the following CP/Buses, Large Scale Computers, Local and Wide-Area Networks, Real-Time Data Acquisition, Interactive Graphics, Modeling and Simulation, Man-Machine Interfaces, Advanced Software Methodologies and Software Tool Development. Experience desired with Requirements Analysis Languages, Subcontractor, Proposal Preparation and Software Coding Methods.

**SOFTWARE DEVELOPMENT ENGINEERS** Experience sought in the design and implementation of software code structure, large scale programming techniques including PASCAL, C, ADA, FORTRAN 77 with DEC, DATA GENERAL, or HARRIS 800/800 Systems. Exposure to modern design methodologies (such as POLI) and structured development (team concept/structured walkthrough) of medium to large scale software systems desired.

We are part of the Fortune 500 Harris Corporation, America's largest industrial employer. We offer an excellent compensation and benefits package, a formal merit reward program, and outstanding advancement opportunities.

If you feel that your present position doesn't offer the kind of challenge and recognition you really want, call Julian G. Eastman, COLLECT, Monday thru Friday, 9 am-6 pm, EST at (800) 676-4487, for more information. Or send a resume to the attention of Harris Corporation—Software Operations, Dept. CW, 180 Wickham Road, Melbourne, Florida 32901-1132. For further information after business hours, call 1-800-327-6552.

### U.S. CITIZENSHIP REQUIRED.

MS MAY BE REQUIRED.

An equal opportunity employer M/F/H/V.

**HARRIS**  
IF IT'S HAPPENING IN ELECTRONICS,  
IT'S HAPPENING AT HARRIS.

## SYSTEMS PROGRAMMERS

Outstanding career opportunities are now available with the Harris division's most progressive leading research facility which enjoys a national reputation for cutting-edge research and development. These openings are opportunity limited with our Research Department which has operated prominently in state-of-the-art technological applications.

In our position qualified candidates will work on our development/research computer systems, including real time systems, processing, networking, image acquisition and display systems. A Bachelor's Degree in Engineering or Computer Science and a minimum of 2 years in systems programming (experience in language with DEC computer systems is necessary).

The other position requires working on development of new systems and applications and modifying and maintaining the data base system for real-time. A BS in Computer Science, 2 years systems and applications programming on DEC or VAX, full-time less experience is required and experience in RPL, Basic-Pascal and ALGOL is preferred.

In both positions hospital experience is a plus, but not required. If you have the qualifications we seek and you are a resident of a metropolitan area located in one of the most desirable areas of the western United States, consider an extremely progressive and stable research position which includes tuition reimbursement, forward your resume without delay to: Leonard G. Hahn, HRP Recruitment, 2601 Spruce St., Philadelphia, PA 19104.

## We owe our success to great peripheral vision.

When System Industries first started, the data storage system was viewed as just a peripheral to the computer. Now, 14 years later, the data storage system is the heart of most computer applications. And System Industries has become the world's largest independent supplier of high performance DEC and Data General compatible disk and tape storage systems. We still have exciting visions of what data storage can become. Our ever-expanding product line ranges from 80 to 875 megabytes. Our SIMACS system, upgradeable from a current controller, can handle eight CPUs on a single database. And we're developing a SNACT system that will accommodate multiple vendors and CPUs. It's the ongoing technical vision that has found our products in use everywhere from the FDA to Harvard University.

Our high-performance data storage products have met with such consistent success that we've grown an average of 50% annually for the last 12 years—installing over 30,000 storage systems worldwide. We're a good company to work with, and a good company to work for.

### Field Service Engineer

We place such critical emphasis on field support, that many of our engineers have gone on to management positions.

**SYSTEM INDUSTRIES**  
Competent Commitment

with System Industries. We have immediate openings in the following areas:

- Providence, RI
- Quincy, MA
- Stamford, CT
- San Diego, CA
- Los Angeles, CA
- Chickadee, CT
- San Jose, CA
- New York, NY
- Seattle, WA
- Orlando, FL

Your responsibilities will include troubleshooting and maintaining PM schedules on our CDC-class and data storage equipment. You'll need at least 2 years' previous field engineering experience involved with Disk or Tape Systems installed on DEC, Data General, HP, or Prime Computer systems. Previous experience in maintenance of CPU would be a plus.

We offer an excellent compensation and benefits package, including medical, dental, vision and life insurance, stock purchase plan, travel reimbursement, and in-house company training at our plant in Milpitas, California.

To join our fast-growing field service group, call 800-538-8152, extension 980 in California, 800-572-3470 extension 980, in Canada, call collect 408-990-7160, or send your resume to Professional Staffing, System Industries, Dept. CW1, 3555 Barber Lane, P.O. Box 789, Milpitas, California, U.S.A. 95035. We are an equal opportunity employer.

## A DIRECTION FOR THE 80's

FORWARD MOVING...that's the Grayhound direction. We're moving into some exciting areas that offer far-reaching career options for individuals also on the move. At Grayhound, you'll move further because there are more places to go. Move your career forward.

### EDP AUDITOR

Participate in the start-up of a new department. Perform EDP audits within the diversified Grayhound Corporation and supports other auditors in their duties as they relate to data processing operations. If you are appropriately degreed with 2-3 years recent data processing experience and are currently working as an EDP Auditor, find out why Grayhound could be the most exciting career discovery you'll ever make.

Be part of our new directions for the 80's. We offer a very competitive salary and excellent fringe benefits, including medical, dental, and life insurance. To be considered, please send your resume and salary history in confidence to: Director of Staffing, Grayhound Corporation, Grayhound Tower 0682, Phoenix, AZ 85077.

Equal Opportunity Employer M/F/V/H

# PROGRAMMERS SYSTEMS ANALYSTS

The Central Intelligence Agency offers experienced programmers and systems analysts the unique opportunity to contribute to our nation while advancing your career. To us, your skills are as vital as we are.

The CIA is seeking a select group of highly skilled programmers, systems analysts, and knowledge engineers to participate as team leaders or team members in the development of software systems to support intelligence analysis. Your responsibilities will include:

- Profounding overall software requirements definition, analysis, and design
- Analyzing new software requirements and developing system specifications
- Maintaining and updating existing software
- Developing software documentation
- Serving as consultant in your area of specialization

Knowledge and experience combining several of the following is highly desired: PL/I, COBOL, Pascal, FORTRAN, INTERLISP, SMALLTALK, fourth generation DBMS (particularly NCMA2 or RAMP-S), IBM JCL, and system utilities. Also desired is a degree in Computer Science, Mathematics, Statistics, Economics, Military Science or a related area. Familiarity with intelligence analysis a definite plus.

The CIA offers competitive salaries based on your experience and qualifications. You will enjoy working and living in the Washington, D.C. area, with its choice of athletic, cultural, and historic attractions. You also will appreciate the CIA environment... challenging, rewarding, intellectually stimulating.

To apply for a career with the CIA, send your resume to:

Personnel Representative  
Dept. S, Rm. 4H20 (8M)  
P.O. Box 1825  
Washington, D.C. 20013

## Central Intelligence Agency

The CIA is an Equal Opportunity Employer. M/F

### VAX SYSTEMS PROGRAMMER

GTE Laboratories, the central research and development facility of the entire Corporation of more than 80 communications, products, research and service subsidiaries in the U.S. and 18 countries around the world, is currently seeking a VAX Systems Programmer.

We seek an experienced individual to help guide our rapidly expanding VAX environment. You will be responsible for networked multiple VAX 11/780 CPUs in a research environment, maintaining systems at high levels of availability, ensuring optimal system performance as well as specifying and installing new hardware and software. This position offers strong growth potential for the right individual who possesses supervisory skills.

Minimum requirements include a BS/MS in Computer Science or Electrical Engineering and several years experience with VMS, UNIX or network communications (DEC NET, LAN) experience are also highly desirable. Strong knowledge of VMS systems internals, VMS Assembly, C and Pascal or Fortran is required.

GTE Laboratories offers an outstanding benefits package including a company-paid medical/dental insurance plan, a pension plan, paid holidays and vacation.

To apply, please send your resume to Cynthia Ford, GTE Laboratories, Inc., Dept. CENR24, 40 Sylvan Road, Waltham, MA 02154. An equal opportunity employer, M/F.

# Senior Software Engineers ... Advance with the Leader

Booz-Allen & Hamilton is one of the oldest and most respected names in management and technology consulting today. We earned this reputation by supplying solutions to complex technical problems with consistent excellence. We need the best and brightest professionals who are challenged by a diverse environment, and unlimited opportunity for professional growth.

Our Communications, Electronics and Intelligence Division is just such an environment. CEID is involved with the design, development and implementation of DOD Intelligence Data Handling Systems (IDHS). We have a requirement at our Fairview Heights (Scott AFB) location for an experienced individual who wants to apply his talents and expertise along with leadership capability in a key technical role.

The successful candidates must have a technical degree, minimum 5 years experience in an IBM and/or VAX environment. They must also possess excellent interpersonal skills and demonstrated experience in one or several of the following areas:

- Software Design & Implementation
- ADP Security
- Automated Message Handling
- Data Base Management Systems (Model 304)
- Computer Networking

If you want to advance your career with a leader, send your resume, in confidence, to: Mr. Michael D. Star, Booz-Allen & Hamilton, CEID, 4330 East West Highway, Bethesda, Maryland 20814.

CALL TODAY

**MISSISSIPPI CENTRAL DATA PROCESSING AUTHORITY**  
Several proposals will be received by the CPDA, 600 Robert E. Lee Building, Jackson, MS 39201 for the following data processing equipment and services: Request for Proposal No. 807, due 3:30 p.m., Thursday, March 23, 1984. The State of Mississippi desires to contract with a consulting firm to help the State Department of Public Welfare in the design of the Integrated Application/Work-order Display Reporting and Information Control System (IAWRICS), an integrated display system that includes the four programs listed below. The firm awarded the contract must provide the State with assistance in designing and testing of the following software programs: AFPC, Patient Transfer, Social Services, and Child Support. Services are needed for these phases of the IAWRICS project: Completion of the Initial Design Phase, Development and Testing Phase, and Implementation Phase through certification by the Patient Funding Agency. A secondary display unit will be held at 115 East Capitol Street in Jackson, Mississippi, on Thursday, March 8, 1984, at 1:30 p.m. Request for Proposal No. 808, due 3:30 p.m., Thursday, March 1, 1984, for the acquisition of a multiprogramming microcomputer system for administrative and instructional applications at Mississippi Junior College in Tupelo, MS. Request for Proposal No. 809, due 3:30 p.m., Thursday, March 1, 1984, for the acquisition of a multiprogramming microcomputer system for administrative and instructional applications at Gulfport Junior College in Gulfport, MS. Detailed specifications may be obtained from the CPDA office. The CPDA reserves the right to reject any and all bids and proposals and to make alterations.

## SOLUTION

DATA SYSTEMS

Solving Your Problems

# HOW TO SAVE \$30,000 PER MONTH ON A 3083 LEASE.

Lease the same 3083 that IBM leases for over \$82,000 per month from Randolph—for less than \$42,000 per month. That adds up to savings of \$1,440,000 over a four-year lease period. If you're renting an older machine, Randolph may save you even more—and you'll get about four times the throughput in the bargain.

## WHEN IS THE BEST TIME TO TALK TO RANDOLPH ABOUT LEASING A 3083?

Now—because Randolph has 3083's available for 4th quarter delivery. But it's never too late, even if you already have a machine installed. Whatever your situation, we can tailor a lease that will fit your exact needs and let you start saving money right away.

## TALK TO RANDOLPH NOW.

We can solve problems like these, and more. Stuck with a lease on your old machine?

We'll sublease it, and provide a new lease on a 3083.

Own a 3083 but need cash?

Sell your machine to Randolph, and we'll lease it back to you.

Machine installed on a rental basis?

We'll show you how to end the lease and install a new 3083. Any

termination charges can be folded into your new Randolph 3083 lease.

## LEASING COMPUTERS IS OUR ONLY BUSINESS.

At Randolph, our people have an average of 18 years in the DP industry... from 380's to 3083's. They know all about alternative financing to be sure, but they also know their way around a DP department and the hardware in it.

## WE LEASE MORE THAN 3083's.

Whatever your needs, now is the time to talk to Randolph. We provide leases for IBM 303X, 4300 and 3081 systems and peripherals—disks, tapes—as well as 3083's.

## UNIQUE FINANCIAL STABILITY.

We're an important part of one of the nation's oldest and leading financial institutions... The First National Bank of Boston. 18 years in computer leasing gives added assurance that Randolph will continue as the leader in the computer leasing industry... continue to live up to the terms and conditions of our agreements... provide upgrades... fulfill all of our commitments.

## LET RANDOLPH HELP YOU SAVE \$30,000 PER MONTH.

We can solve a lot of problems for you, and save you money, too. Talk to Randolph now... call Joseph B. Kelly, Jr., Executive Vice President, 800-363-6392.

## VERTICAL MARKET SOFTWARE AUTHORS AND PUBLISHERS WANTED!

for  
**HARRIS DATA  
SERVICE, INC.**  
**Why?**

Because...  
We're like you to consider "packaging" our IBM System/38, S/34, S/36 financial software packages (including GL, A/P, R/L, P/L, A/R) with your specialized vertical market software... either as an integrated turnkey offering or as an "Add-On" product offering.

**Why?**

Because...  
Harris software is professionally written and packaged. Standardized programming and documentation management allows for practical package modification and interface to your vertical market software. Attractive product summaries, complete user oriented demo/documentation and an aggressive, nationwide advertising campaign are available as effective sales tools for you.

Because...  
Harris software is user oriented, tasks driven and multi-company facility oriented with all financial modules integrated.

Because...  
Harris software products are presently installed at several thousand computer sites throughout the U.S. and Canada.

Because...  
where there's business, there's accounting!

Harris is ready to offer a most attractive financial arrangement and complete turnkey services to interested vertical market software vendors/publishers.

CAN WE TRY?

# SECURITY

Protect sensitive information with Ven-Tel's 212 SECURITY PLUS. Password restrict any terminal to calling only the destinations and applications you authorize. Telephone numbers, passwords, account numbers, and log-in codes are concealed to prevent unauthorized disclosure or use.

Ven-Tel security is not limited to password protection. You are secure in the confidence that your Ven-Tel modem is the most reliable and dependable in the world.

Security is the assurance that Ven-Tel has committed the investment in research,

development and production facilities necessary to continued industry leadership and provide off-the-shelf delivery.

Security is knowing that the modem you buy from Ven-Tel is the most modern, technologically advanced product available on the market today. It is knowing that when you need help, a Ven-Tel technical support specialist is as close as a telephone call. It is the confidence that Ven-Tel will be there with service and support for your equipment as long as you own it.

For information call (800) 538-5121.
